1. Site Investigation Study: Evaluate existing design calculations, soils reports and surveys to provide an accurate picture of environmental conditions prior to construction (i.e., subsurface structures, environmental issues, soil borings and ground water, etc.) This will help to provide a more accurate cost for related scopes of work.
2. Benchmark Study / MEP Benchmark Study: During Schematic Design review, Skanska's best practices and lessons learned from past projects are utilized, enabling the team to outperform and exceed expectations. Verify costs of previous projects, building components and systems versus current projects of similar scope, size, delivery method, function and complexity. Real life subcontractor collaborative experts will be utilized in this phase to ensure all pricing is current and accurate for the highest quality pricing available in the market.
3. Program Verification: Analyze designers program & price components and verify against the stated budget.
4. Report Evaluation: Evaluate consultant reports (environmental, archaeological, soils, etc) for impacts to schedule, cost & constructability.
5. Material Investigation: Locate specified materials and identify any material weaknesses for the local conditions. Provide alternative materials where necessary and search for comparable materials as required. Conduct feasibility analysis of building systems for cost and design constructability.
6. Logistics Planning: Provide a site logistics plan that is phased throughout the duration of the project. Plan shall include all critical project elements (i.e., trailers, staging plans, material lay down areas, construction entrances, etc.).
7. Scheduling: Take the schedule information created to date and overlay the preconstruction work plan to generate the master preconstruction schedule. Hold meetings with the owner and design team to generate all milestones and anticipated durations. Track design milestones, permitting issues, estimate updates and any other key owner information. Review and update the schedule weekly to aid the team in prioritizing and focusing on critical activities.
8. Engineered Maintenance of Traffic Plan: Develop and maintain an engineered MOT Plan to insure safe access and egress from site for all vehicles and pedestrians. Develop, approve and maintain throughout the life of the project.
9. Control Budget: Skanska will utilize our Budget Control System (BCS) to track the impact of design evolution against the control estimate by developing a control budget based on the preliminary

documents. Subcontractor input will consist mainly of the larger trades. Value engineering studies begin at this stage to prevent design changes late in the process.

10. Schematic Budget & Preconstruction Cost Event (PCE) Log: Establish a schematic cost estimate, review with team and set as the original budget for the project. Any additions or deletions as changes occur will be maintained in the PCE log. Each item will be reviewed at every meeting for owner approval or rejections. This will help to identify project risks and categorizing them by their potential to affect cost and schedule, and create plans to mitigate the risks. Skanska will additionally use subcontractor collaborative experts for pricing and constructability exercises to ensure that choices made at this stage are aligned with the city's expectations. The deliverable will be a complete analysis with real time cost estimates and backup and will contain all backup documentation needed to make informed decisions moving forward.
11. Design Development Budget: At design development, all of the schematic estimate practices will be utilized in addition to the following exercises. A new refined estimate that incorporates the control budget and the PCE log and becomes the new benchmark estimate with a new PCE log. Collaborative experts will again be used for all trades and will be solicited for general cost estimating. This process provides real-time budget status between major estimate deliverables and eliminates surprises that can lead to redesign efforts in order to get costs back in alignment. At this phase, the submission will also include a project task sheet that will identify potential small business subcontracting opportunities. Skanska will work with the city to schedule a project task sheet review meeting to establish desired percentage of participation as well as provide a list of city-certified small business firms.
12. Florida Product Approval: Coordinate with architect to ensure that all materials that require product approval are listed on the plans correctly.
13. LEED Silver Equivalency: Coordinate with the architect to ensure that all selected materials will qualify for LEED certifications.
14. Water Proof Testing: Develop the required level of waterproofing testing procedures for applicable systems with a cost for each type of test.
15. Permitting: Identify and understand the required municipal and regulatory permitting approvals (and sequence) for commencing construction. Review desired permit strategy with Owner and A/E so that the corresponding design drawings can be delivered in a sequence that supports the permit strategy. Schedule and coordinate Building Department inspections throughout the installation process and arrange for Certificate of Occupancy Inspections.
