SCALE: 1/4" = 1'-0"

NOTES:

1. Finish Grade at Building to be El. 40.58 with Uniform Slopes to South ℄ at El. 40.00 and to match Existing Grades at East, North and West ℄ except as noted.
2. Existing and Future Facilities to be constructed under Other Divisions shown in Light Lines. Facilities included in this Division are shown in heavy Lines.
3. Locations, Elevations and Dimensions of Existing Utilities, Conduits, Process Piping, Other Underground Piping, Structures and other Features are shown according to the best Information available at the Time of the preparation of these Plans but Do Not purport to be absolutely correct. The Contractor shall verify the Locations, Elevations and Dimensions of All Existing Utilities, Structures and Other Features affecting His Work prior to Construction.
4. The Contractor shall provide at least 48 Hours Notice to the City in order to permit the Location of Existing Underground Utilities, Conduits, Process Piping and Other Underground Piping and Structures in advance of Construction.
5. Site Dimensions are to Outside of Structure Walls.
6. Location of Power Line to be established in the Field by the Engineer based on TECO requirements.

16 Numbers shown thus on this Sheet are for reference only, and do not designate Details identified on other Contract Drawings.

NOTE: ALL ELEVATIONS SHOWN ARE REFERENCED TO CITY OF TAMPA DATUM. TO CONVERT TO NATIONAL OCEAN SURVEY (NOS) DATUM, SUBTRACT 0.15 FEET (0'-1 13/16").

RECORD DRAWING
THIS RECORD DRAWING IS NOT WARRANTED BUT IS BELIEVED TO REPRESENT CONDITIONS UPON COMPLETION OF CONSTRUCTION WITHIN REASONABLE TOLERANCES, BASED UPON THE INFORMATION FURNISHED TO THE ENGINEER PERTAINING TO CHANGES MADE DURING CONSTRUCTION.

GENERAL NOTES

1. Limestone to be excavated to approx. [illegible] minimum below the bottom of [illegible] and the space filled with compacted crushed stone [illegible].
2. For compacted fill, backfill and crushed stone fill, see Spec's.
3. Backfill shall not be placed against any substructure wall until forms have been stripped from adjacent slab or unless walls have been properly braced, and in no case sooner than 28 days after placing of wall concrete.
4. For compressive strength of concrete see specifications.
5. Exposed corners shall have 3/4" chamfer and re-entrant corners shall have 3/4" flat fillet unless otherwise noted.
6. All reinforcing shall meet as a minimum the requirements of A.S.T.M. Des: A615, Grade 40.
7. All reinforcing shall be detailed according to the Manual of Standard Practice for Detailing Reinforced Concrete Structures" (ACI Standard 315-74)
8. Concrete cover for reinforcing bars:
   a. Concrete deposited directly against soil and footings (bottom, sides & ends) - 3". Concrete deposited against concrete workmat - 2".
   b. Slab - Troweled surface - 1 1/2"; Elsewhere - 1"
   c. Beams and Columns - 2" (see f)
   d. Walls 12" or more thick - 2" (see f); Less than 12": #6 bars or larger - 2" (see f); #5 bars or smaller - 1 1/2" (see f)
   e. Footings (top surface) and base slabs - 2 1/2"
   f. Add 1/2" for surfaces contacting, or exposed to water or sewage.
9. All reinforcing shall be lapped in accordance with the lap splice table given below unless otherwise shown or noted.
10. The actual placement of reinforcing shall be as shown on the approved shop drawings.
11. For sleeves, wall castings, openings in walls and slabs; and other items embedded in concrete and not shown; and equipment bases, see Architectural, Equipment, Electrical, Plumbing and Ventilating Drawings.
12. All structural steel shall be detailed, fabricated and erected in accordance with the latest A.I.S.C. specifications.
13. Structural steel shall conform to ASTM A36. Bolts shall be 3/4"φ friction type high strength bolts conforming to ASTM A325. Electrodes for welding shall be E70XX.
14. All details and sections shown on drawings are intended to be typical and shall be construed to apply to any similar situation elsewhere.
15. Size and location of concrete bases and anchor bolts shall be arranged for equipment furnished and in accordance with approved shop drawings.
16. All curbed and other openings in floors, roofs, walls and equipment bases for duct work, piping and other equipment shall be in accordance with approved shop drawings.
17. REINFORCING BAR LAP SPLICE TABLE

Bar Size		#3	#4	#5	#6	#7	#8	#9	#10	#11
		SPLICE LENGTH - INCHES*								
Top Bars**	"B"	12	12	15	21	28	37	47	59	73
	"C"	12	12	19	27	37	48	61	78	95
Other Bars	"B"	12	12	12	15	20	27	34	43	52
	"C"	12	12	14	20	27	35	44	56	68

* For splices spaced closer than 6", increase lap length 25%.
** Top bars are all horizontal reinforcing placed so that more than 12 inches of concrete is cast in the member below the bar.
A. Unless specified otherwise, all lap splices shall conform to the table above.
B. Unless specified otherwise, the length of lap for splices shall be length "B" where no more than 1/2 of the bars are lap spliced and length "C" where more than 1/2 of the bars are lap spliced.

18. Construction joints with or without waterstops shall be installed where shown on drawings. No such joint shall be added or omitted without prior approval of the Engineer. Such joints shall be installed as shown on any view even if they are not shown on all views of any particular area.

LEGEND

TECO – Tampa Electric Company
M – Contactor Operating Coil
PSR – Phase Sequence and Undervoltage Relay
SAL – MD Drive Alarm Contact (Closes on TG Failure)
SS – Selector Switch
ES – Emergency Stop Push Button
SI – Speed Indicator
GSR – Ground Fault Sensing Relay
ETM – Elapsed Time Meter
TMR – Timer

FU – Fuse
LS – Limit Switch
LSS – Suction Sluice Gate Limit Switch
OL – Overload Relay
LLC – Liquid Level Control
DPS – Differential Pressure Switch
DVS – Pump Discharge Valve Solenoid Control Valve
SWS – Seal Water Solenoid Valve
LEL – Lower Explosion Limit
AR, CR – Control Relay

PDT – Pump Transfer Duty Switch
TR – Timing Relay
TO – Time Opening
TC – Time Closing

LI – Liquid Level Indicator
DT – Transfer Duty Switch
VIB – Vibration Sensing Switch
POT – Manual Speed Adjusting Potentiometer
Ψ – Thermistors
SF – Seal Water Flow Switch
LTS – Low Temperature Thermostat
TG – Tachometer Generator
MG – Controller for Thermal Protection
MDC – Magnetic Drive Contactor
MD – Magnetic Drive
MCP – Motor Circuit Protector
ES – Emergency Stop

△ – Located remotely from Control Center
S/L – Start-Stop/Lockout P.B. Station
——— – Exposed Conduit
- - - – Embedded Conduit, or under Slab
—·—·— – Grounding Conductor
– Duplex Receptacle
– Single Receptacle
– Clock Outlet
– 480 Volt-3 Phase-Receptacle
R – Indicating Light, R-red, G-green, B-blue, A-amber
– Mercury Vapor Light Fixture

– Fluorescent Light Fixture
$ – Light Switch
$3 – Light Switch 3 Way
$PL – Light Switch with Pilot Light

Y – Furnished with Equipment
– Ground Rod

X – Explosion-Proof
P – Pressure Switch
F – Float Switch
T – Thermostat
SV – Solenoid Valve

WP – Weatherproof
PC – Photo Cell
ALT – Alternator
HL – High Water Level Switch

50A – Circuit Breaker with Thermal-Magnetic Trip rated 50 A.

1200A/1000A S – 1200 A Frame Circuit Breaker with Solid State Sensor, rated to monitor 1000 A

MCP 3E M – Across the Line Motor Circuit Protector (MCP) Combination Starter with Control Transformer and Overload Relays (M-Operating Coil)

MCP 3E H – Combination two Speed Motor Starter with Control Transformer and Overload Relays

NOTES:
1 – Transformer Concrete Base, Underground Conduit & Grounding shall be in Accordance with TECO Requirements.
2 – Terminate in Accordance with TECO Requirements.
3 – Conduit for the Telephone Line shall be installed and terminated in accordance with the Telephone Co. Requirements.

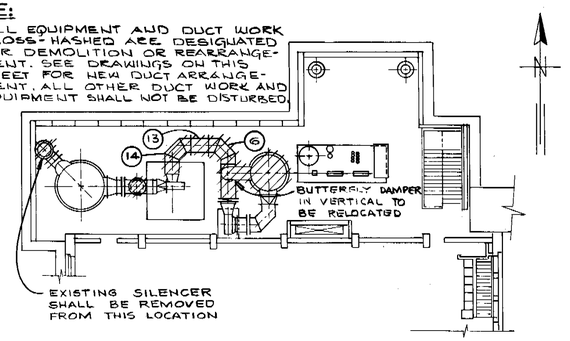
SAN CARLOS PUMPING STATION - PLAN AT EL. 26'-6"

SCALE: 1/8" = 1'-0"

NOTE:

ALL EQUIPMENT AND DUCT WORK CROSS-HASHED ARE DESIGNATED FOR DEMOLITION OR REARRANGEMENT. SEE DRAWINGS ON THIS SHEET FOR NEW DUCT ARRANGEMENT. ALL OTHER DUCT WORK AND EQUIPMENT SHALL NOT BE DISTURBED.



DEMOLITION PLAN

SCALE: 1/16" = 1'-0"

NOTES:

1. ALL NEW WORK IS SHOWN IN BOLD LINE WORK. ALL EXISTING OR RELOCATED EQUIPMENT OR STRUCTURE IS SHOWN IN LIGHT LINE WORK.
2. ALL NEW WIRING AND DEVICES FOR THE NEW ORP CONTROLLER SHALL BE MOUNTED AND INSTALLED ON THE EXISTING NaOCl WET SCRUBBER TOWER AND IN THE COMBINATION RECTIFIER CONTROL PANEL-MCC IN ACCORDANCE WITH DIRECTIONS FROM PEPCON AND AS APPROVED BY THE ENGINEER.
3. ALL CONDUIT OUTSIDE OF THE PUMPING STATION SHALL BE RUN 7'-0" MIN. ABOVE SLAB AT EL. 11.92 SHALL BE NEATLY GROUPED AND SHALL BE WELL SUPPORTED PER SPEC. #-35.04 AND AS APPROVED BY THE ENGINEER. ROUTING OF CONDUIT SHALL BE AS APPROVED BY THE ENGINEER.
4. ALL CONDUIT INSIDE OF THE PUMPING STATION SHALL BE RUN ALONG WALLS, UP TO THE CEILING OR OTHERWISE, AS APPROVED BY THE ENGINEER, SO AS TO BE CLEAR OF ANY INTERFERENCES WITH EQUIPMENT, DOORWAYS AND THE LIKE.
5. DUCT WORK DESIGNATED WITH A CIRCLED NUMBER 9 IS EXISTING. SEE PEPCON DWG'S: 20.8-190 THROUGH 20.8-192.
6. ROOFING SHALL BE 20 YEARS BONDABLE 4-PLY BUILT-UP TAR AND GRAVEL AS MANUFACTURED BY THE KOPPERS CO. OR EQUAL. INSTALLATION SHALL BE IN CONFORMANCE WITH THE MANUFACTURER'S RECOMMENDATIONS.
7. EACH FLANGED CONNECTION IN THE DUCTWORK REQUIRES A 1/8-INCH THICK GASKET.
8. ALL NEW DUCTWORK SHALL BE PIGMENTED WHITE AND SHALL MATCH CONSTRUCTION OF EXISTING DUCT IN ALL RESPECTS.
9. DIMENSIONS OR ELEVATIONS DESIGNATED THUS ** SHALL BE VERIFIED BY FIELD MEASUREMENT PRIOR TO SUBMITTAL OF SHOP DRAWINGS. OTHER DIMENSIONS DEPENDENT UPON SUCH DIMENSIONS OR ELEVATIONS SHALL BE MODIFIED AS REQUIRED AND APPROVED IF FIELD MEASUREMENTS DIFFER FROM THOSE SHOWN. SUCH REQUIRED MODIFICATIONS SHALL BE AT NO CHANGE IN CONTRACT PRICE.

SPECIFICATIONS

1. GENERAL

Unless shown or specified otherwise, all Workmanship and Materials shall conform to the Division 4L3 Contract Documents.

2. CAUSTIC SCRUBBER

The new Caustic Scrubber shall be designed to neutralize all acids and acidic compounds present in the treated air stream from the existing NaOCl Wet Scrubber Tower. The new Caustic Scrubber shall be of the size and shape shown, arranged to fit in the available space and have a retention time of approximately 3 seconds based upon an air flow rate of 12,300 cfm. The new Caustic Scrubber shall be designed to use a "once through" solution of NaOH and softened water to neutralize all acids and acidic compounds in the 12,300 cfm air stream based upon 100 percent humidity and an inlet pH range of 1.0 to 6.0. The pH of the spent chemical to drain shall be in the range of 7.5 to 8.0 Softened water consumption shall not exceed 1.0 gpm. The new Caustic Scrubber shall be constructed of FRP meeting the requirements of the Workmanship and Materials section headed "Duct work and Dampers" and shall be chemically resistant to the caustic solution. The new Caustic Scrubber shall be equipped with a chemical distribution device or devices, as required, to supply the caustic solution so as to cause intimate contact between the chemical and the air stream to provide the required acid neutralization. The new Caustic Scrubber shall be as manufactured and supplied by QUAD Environmental Technologies Corp., Highland Park, IL, or equal.

3. AIR COMPRESSOR

The new Air Compressor, shall be of the rotary screw type, having a minimum rated capacity of not less than 68 cfm at 110 psig, driven by a 15 HP 460 volt, 3 phase, 60 hertz electric motor. Final capacity and pressure requirements shall be as required by the manufacturer supplier of the new Caustic Scrubber. The new air compressor shall be a completely factory assembled package, housed in an acoustical enclosure, and shall be Model SK 18 as manufactured by Kaeser Compressors, Fredericksburg, VA, or equal.

An air compressor malfunction shutdown alarm contact shall be provided. The malfunction shutdown alarm contact shall be wired to a spare alarm point of the existing pumping station annuncistor.

4. CHEMICAL METERING PUMP

The chemical metering pump shall be positive displacement, diaphragm type pump. Output volume shall be adjustable while pump is in operation from zero to maximum capacity. Adjustment shall be by means of readily accessible dial knobs, one for changing stroke length and the other for changing stroke frequency. Both knobs shall be located opposite the liquid handling end. Control of metering pump shall be selectable between internal and external pulsing by means of a 3-position HAND-OFF-AUTO switch. When in the HAND position, metering pump capacity shall be manually adjustable by means of the pump mounted knobs. When in the AUTO position, metering pump capacity shall be automatically adjusted by the automatic chemical pacing controls specified hereinafter. The chemical metering pump shall be capable, without a hydraulically backed diaphragm, of injecting chemicals against pressures up to 100 psig.

The size and capacity of the chemical metering pump shall be determined by the caustic scrubber manufacturer-supplier to provide the required quantity of NaOH to neutralize the compounds specified above under the heading "Caustic Scrubber."

The pump drive shall be totally enclosed with splash proof control panel and no exposed moving parts. Solid state electronic pulser shall be fully encapsulated. Electronics shall be housed in chemical resistant enclosure at the rear of the pump for maximum protection against chemical spillage. The chemical metering pumps shall be 120 volt, single phase 60 hertz.

Chemical metering pump housing shall be of chemically resistant glass fiber reinforced thermoplastic with a glass fiber reinforced polypropylene solenoid carrier. All exposed fasteners shall be stainless steel. Chemical metering pump valves shall be ball type, with ceramic balls seating on combination valve seat and seal ring. Valve seat and seal ring shall be renewable by replacing only the combination seat-seal ring. Pump head shall be of PVC material. Fittings and connections at pump head shall be PVC and/or polypropylene.

5. CAUSTIC SCRUBBER CONTROL PANEL

The Caustic Scrubber Control Panel shall be provided complete with all required piping, gauges, regulators, meters, valves and all other such devices requred to dilute and deliver the required quanatity of liquid chemicals to the caustic scrubber. The Panel shall be arranged for wall mounting as shown and shall have fittings properly labeled and ready for field connection to water, chemicals and discharge piping.

6. ELECTRICAL CONTROL PANEL

The electrical control panel shall be a NEMA 3R enclosure constructed of minimum 12 gauge Type 304 stainless steel and shall be adequately reinforced to support all components mounted therein without distortion, bowing or deflection. The electrical control panel shall be provided with a continuously hinged (vertical along left side) door with a heavy duty handle with a hasp for padlock and a 3 point catch mechanism.

Devices to be provided in the electrical control panel shall include, but may not be limited to the following:

- Power disconnect switch with system On indicator light.
- Water On/Off switch and On indicator light (controls water solenoid valve).
- A chemical system power switch with On indicator light (provides power to metering pump and automatic chemical pacing controls).

7. AUTOMATIC CHEMICAL PACING CONTROLS

Automatic chemical pacing controls shall be furnished to provide reliable automatic adjustment of the chemical feed rates of the chemical metering pump so that the pH of the spent chemical to drain is in the range of 7.5 to 8.0. It is the sole responsibility of the Caustic Scrubber manufacturer to design, select and furnish such automatic chemical pacing controls. The automatic chemical pacing controls and a complete description of operation including wiring diagrams and schematics shall be submitted to the Engineer for approval.

8. PIPING, VALVES, GAUGES, SWITCHES AND OTHER DEVICES

Piping for water and compressed air shall be copper pipe and fittings meeting the requirements of the Workmanship and Materials section headed "Miscellaneous Pipe and Fitting". All pipe and fittings for chemical service shall be of plastic pipe of the proper type and formulation for the chemical service employed.

Valves for water and compressed air shall be of the types shown and shall meet the requirements of the Workmanship and Materials section headed "Valves." Valves in chemical pipiines shall be of plastic of the proper type and formulation for the chemical service employed.

Gauges, switches and all other devices shown or required shall be constructed of corrosion resistant materials such as plastic or stainless steel and shall be suitable in all respects for the service employed.

A liquid level switch shall be provided to shut down the NaOH chemical metering pump when liquid level in the drum is low and provide a low level alarm signal to a spare alarm point in the existing pumping station annuncistor. The switch shall be an encapsulated reed type activated by a formed polypropylene float mounted in a PVC float tube. The switch assembly shall be mounted in a corrosion resistant glass reinforced polypropylene housing.

9. BUTTERFLY DAMPER

Butterfly dampers shall be constructed of glass fiber reinforced polyester (FRP). Dampers shall be "Xerxes" 36-inch FRP damper with stainless steel shaft stubs and teflon shaft bushings and locking external position handle, or equal. Dampers shall be provided with hand wheel operators, or when mounted more than 6'0" above the slab, with chain wheel operators.

10. DEMISTER

All demister device constructed of plastic shall be installed in the duct work as shown. The demister shall be designed to effectively remove moisture from the air stream. Head loss through the demister device shall not exceed 0.2 inches water column. A one inch PVC drain connection shall be provided in the bottom of the duct as shown, and be piped to the existing drain system.

11. ORP CONTROLLER

A new ORP Controller shall be provided for the existing NaOCl Wet Scrubber Tower. The ORP controller and associated ORP probe shall continuously check the oxidant concentration of the scrubbing solution. The controller shall adjust the dc output of the existing system rectifier to produce the required amount of sodium hypochlorite solution. The ORP probe shall be equipped with continuous cleaning capacity. The ORP probe and controller shall be as manufactured by the Pacific Engineering and Production Co. of Nevada.

12. WATER SOFTENER

The new water softener shall be Culligan Duplex model HD-45 or equal. Supply piping to the new water softener shall be connected to the existing hard water supply as directed by the Engineer.

13. SINK AND FAUCET

Stainless steel sink shall have overall dimension of 25 inches long, 22 inches wide and 10 inches deep, single bowl compartment, as manufactured by the Elkay Manufacturing Company, or equal. The basin shall be constructed of Type 302, 20-gauge stainless steel, with not less than 1-1/2-inch wide rim on all four sides. All inside corners of sink compartment, vertically and horizontally, shall be rounded to 1-inch radius, and corner intersections shall be spherical coves. The bottom of the sink compartment shall be pitched to a waste opening in a manner assuring complete drainage. The waste outlet shall be a center outlet. Exposed surfaces of the sinks shall receive a No. 4 finish. Overflows, plugs, strainers, tailpieces and related items shall be included.

The water faucet shall be one handle deck mount type with goose neck Model LK-2085-13L as manufactured by Elkay or equal."

14. SPARE PARTS

The following spare parts shall be provided:

a. One complete set of V-belts for the air compressor.
b. One complete NaOH chemical metering pump.

15. MANUFACTURER'S REPRESENTATIVE

The services of a qualified representative of the various manufacturers shall be provided to inspect the installation of the equipment, make any necessary adjustments, place it in initial trouble-free operation, and instruct the operating personnel in its operation and maintenance.

⚠ 16. BLOWER MODIFICATIONS

The existing blower is a New York Blower, Model FE30, driven by a 50 HP, 1770 RPM, 460 V, 3 phase electric motor via 3 V-Belts on a 10.3-inch driver sheave and a 9.25-inch driven sheave at 50.7-inch centers, producing a fan speed of 1969 RPM and delivering 12,300 cfm of air at 14 inches W.C. static pressure.

Blower modifications include changing the blower drive sheaves and belts to produce a fan speed of 2100 RPM in order to deliver approximately 22,300 cfm of air at 3 inches W.C. static pressure.

GENERAL NOTES

1. Slab openings to be wet saw cut. Due to the sensitive nature of the existing electrical and mechanical equipment, no water, dust or debris shall be permitted to enter the pumping station structures. To avoid this, the contractor shall construct a temporary structure directly beneath the slab opening area and may use the existing cranes to serve as platforms. The structure shall be completely sealed to the satisfaction of the Engineer. Refer to General Electrical note No. 4.
2. The contractor shall be liable for any damage to existing equipment or structures.
3. During periods when the contractor is absent from the construction site(s), the slab opening area(s) shall be covered and sealed to prevent rain, dust or debris from entering the pumping station structure(s).
4. During the wet saw cut operation, the contractor shall block off the area on the ground level floor beneath the slab opening area. The contractor shall either post warning signs or station an employee to prevent anyone from walking in this area during the cutting and removal operation.
5. Locations and elevations of existing concrete driveways have been shown to illustrate available areas for crane access. Due to the steep slope (13.7%) at the 13th St. Pumping station, special provisions may have to be made to attain a level surface for the crane.
6. The existing roof slab reinforcing schedule, elevations (City of Tampa Datum) and dimensions shown are based on the best information available, but don't purport to be absolutely correct. Contractor shall verify the locations, elevations and dimensions of all existing utilities, structures and other features affecting his work prior to construction.

ELECTRICAL NOTES

GENERAL

1. All workmanship and materials shall comply with NEC and City of Tampa Code.
2. Only copper conductors shall be used. The bonding characteristics of the new conduit shall equal the characteristics of those existing.
3. Aluminum conduit is to be used where exposed. PVC or Rigid Galvanized conduit is to be used if embedded in concrete.
4. Conduits that are to be cut must be sealed in the junction boxes on all sides of the cutting operations to prevent leakage of water (from the wet saw cut operation) into the remainder of the electrical system. After completion of the wet saw cut operation, the contractor shall blow out all water from the conduits and dry them out. Refer to General note No 2 above.
5. The contractor shall submit, to the Engineer, the procedure and Final routing of conduits for approval.
6. The light fixture (131st Ave.) and fan (13th St.) shall be removed, without damage, and delivered to the Electrical Division of Hookers Point AWTP, 2700 Maritime Blvd., Tampa.
7. All electrical work shall be performed by a licensed electrician.

13th ST.

REF. #1 and #2 Fans are each powered by three AWG #12 conductors carrying 480 V power. Prior to starting the roof cutting operation, remove the existing REF #2 conductors between the REF #2 fan and the contactor and the existing REF #1 conductors between the REF #1 fan and the existing nearest junction box or pull box on the wall of the control room.

After completion of the saw cut operation, reroute new conduit around the roof slab opening. Install three new AWG #12 copper conductors from the pull box or junction box (referenced above) to the existing REF #1 fan and verify correct rotation of fan blades.

131st AVE.

Lighting circuit #1a and #5 may be inoperative during the cutting operation. In an effort to keep the remainder of the lighting system operative, one acceptable method is to run a temporary cable from the 277/480V lighting panel to the overhead light fixture (3b) junction box located just east of REF #2 Fan. Exercise caution not to obstruct the existing overhead crane. This temporary cable would substitute for 9 #1 conductors existing within the ceiling conduit. After completion of the cutting operation and continuity of the conduits has been reestablished, new respective conductors shall be connected to the original terminations. Assure that all light fixtures perform per original schedule.

ANDREW T. CRONBERG, P.E. #32560 CHIEF ENGINEER DEPARTMENT of SANITARY SEWERS	DES: A.H. DRN: E.R. CKD: DW DATE: 7-10-86	APPROVED BY JACK P. MORRISS, P.E. DIRECTOR DEPARTMENT of SANITARY SEWERS	NO. PLAN ALUM. FRAME AND COVER

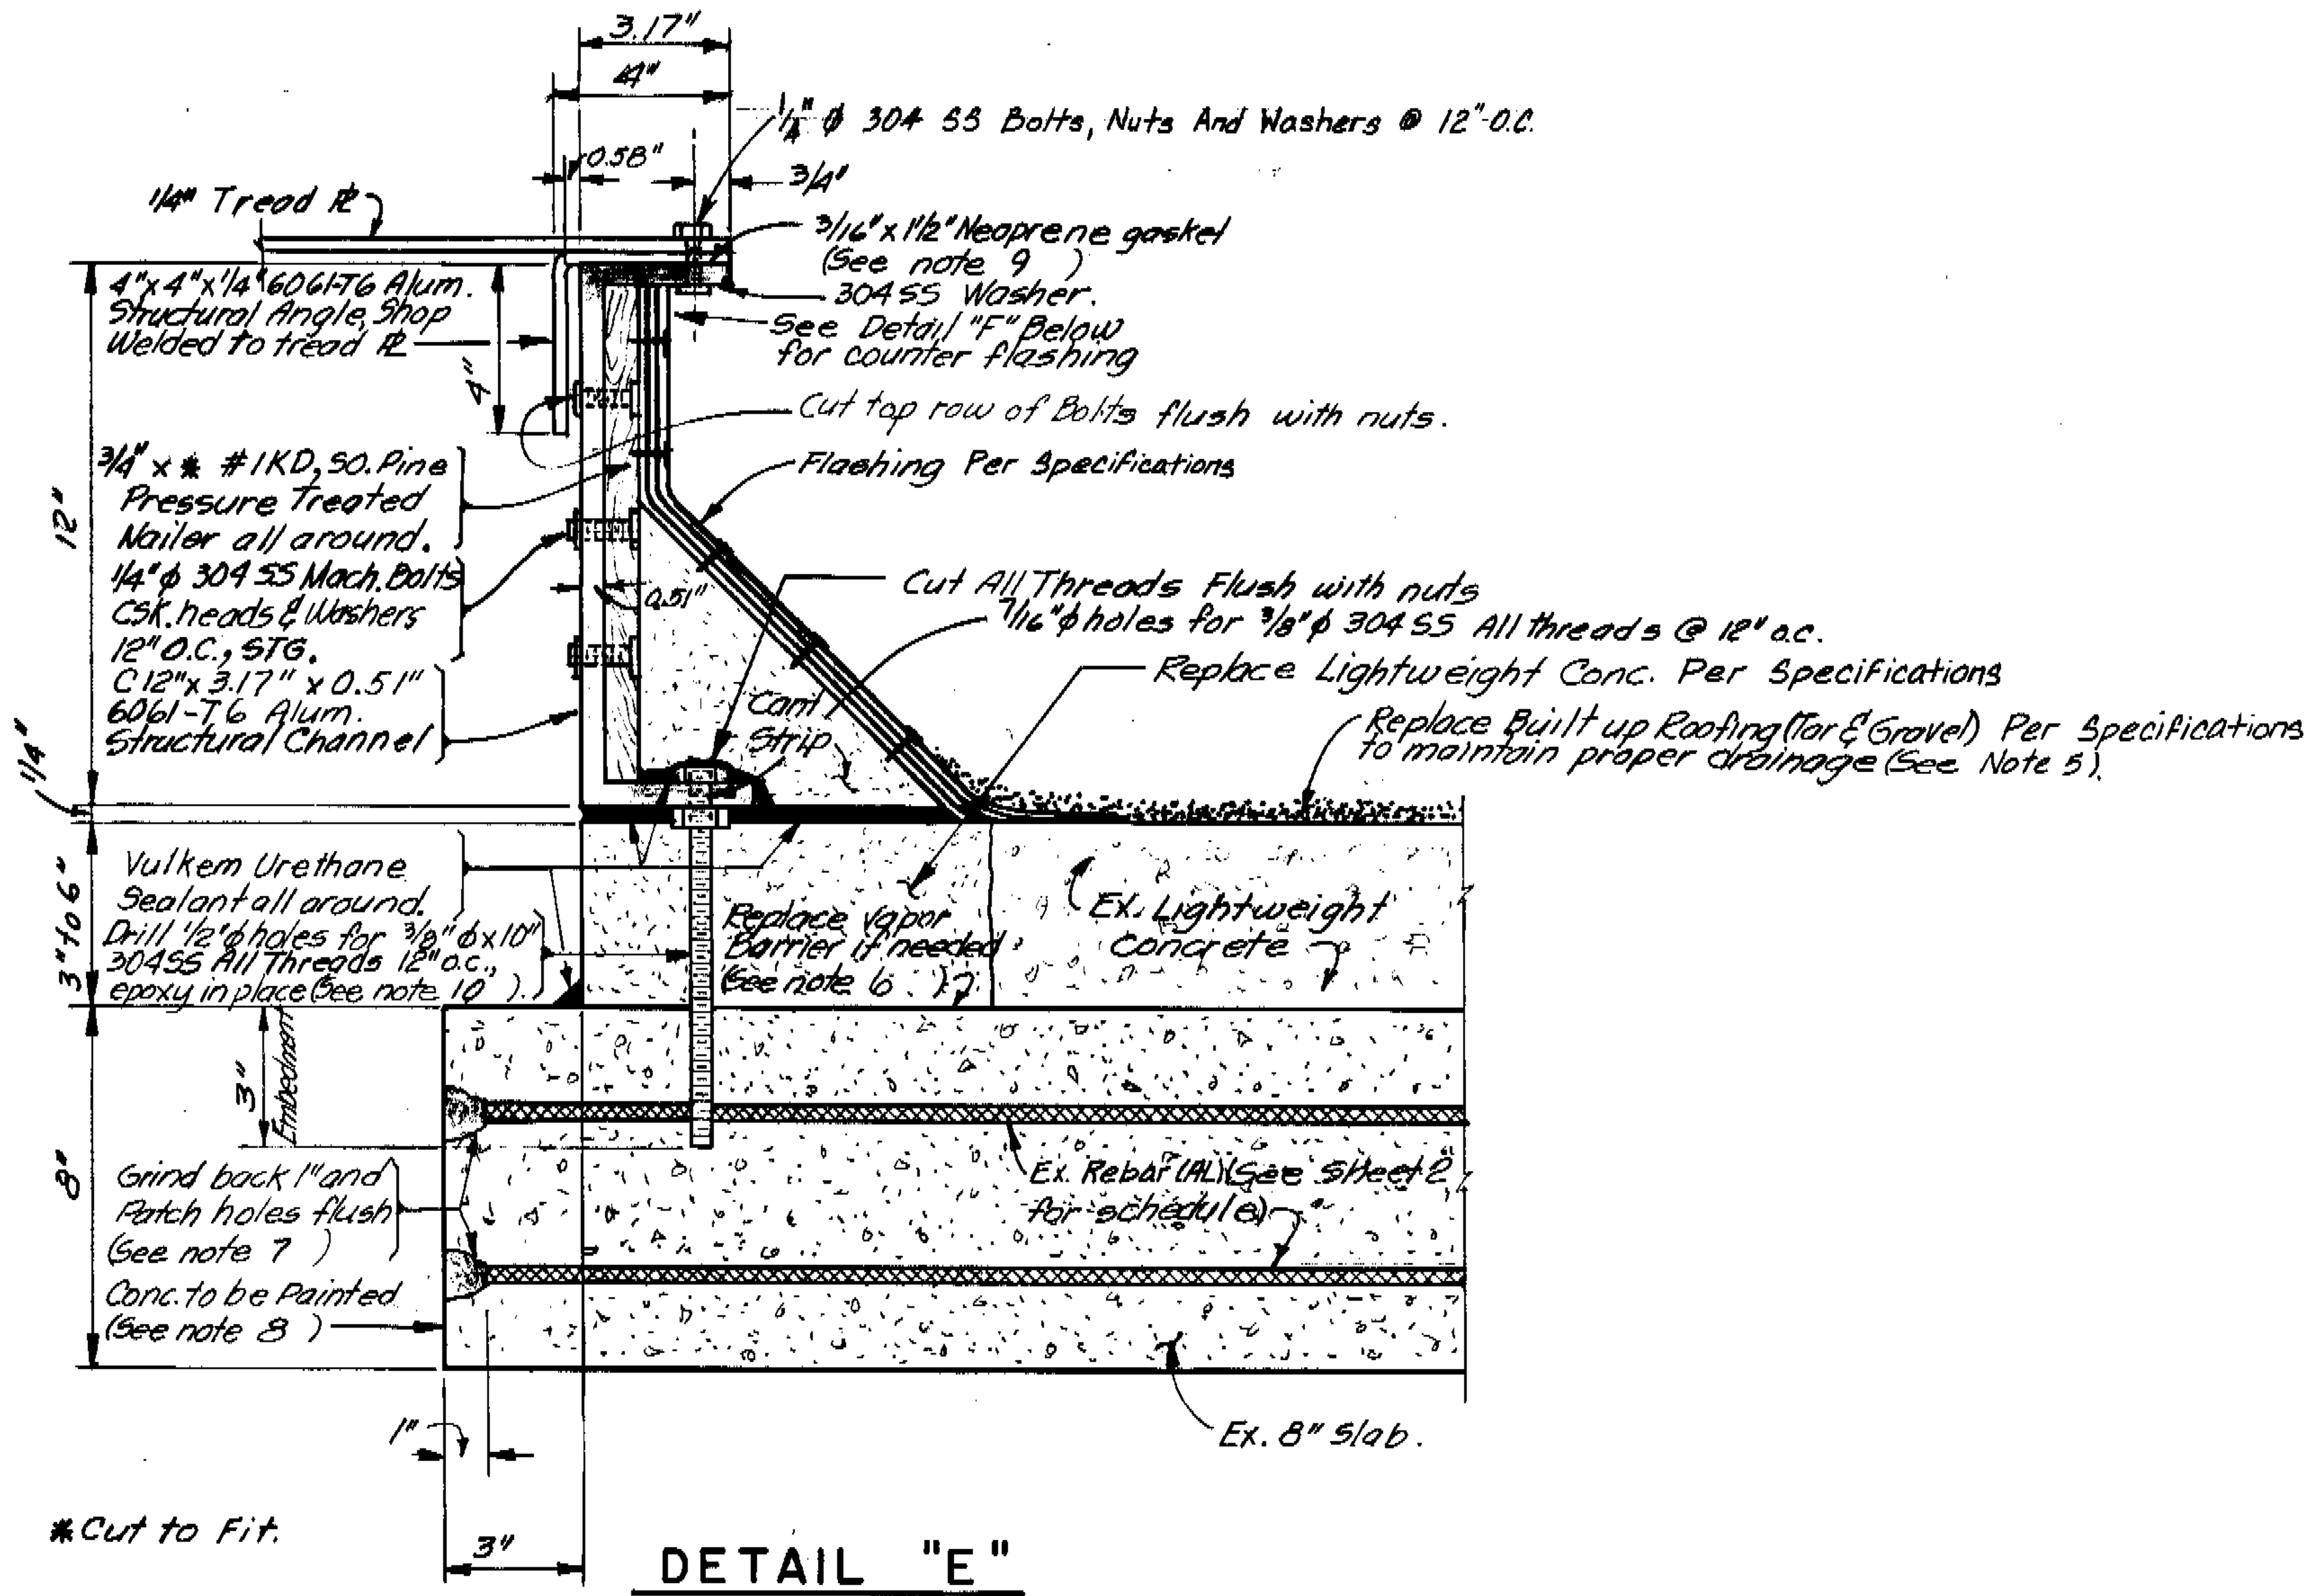
NOT TO SCALE

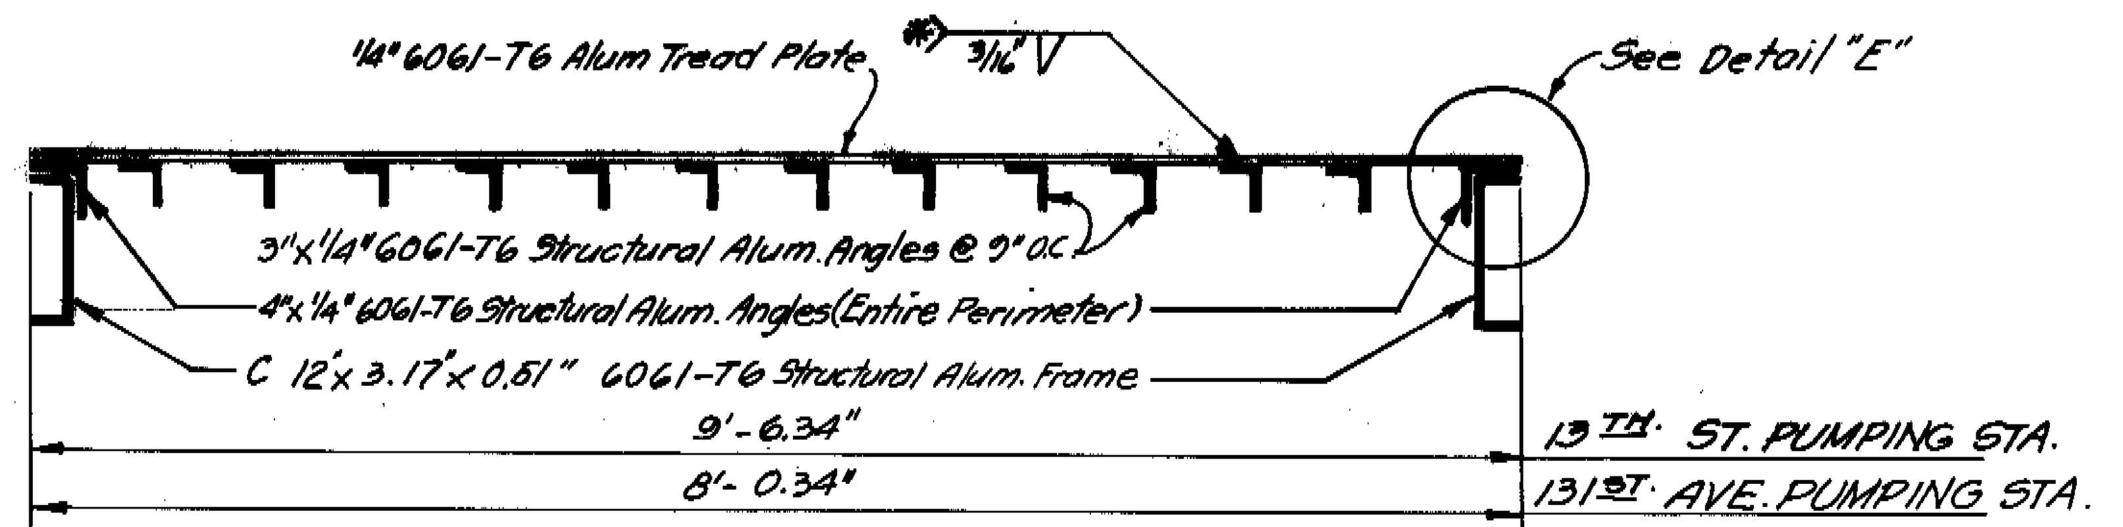


DETAIL "E"

SCALE: 3" = 1'-0"

NOTES

1. Shop drawings For both the aluminum access frame and cover and for the frame installation must be approved by the Engineer prior to fabrication and erection. All changes or substitutions must be approved by the Engineer.
2. All aluminum shall be structural 6061-T6
3. All Fasteners, nuts and washers shall be A304 SS
4. All welds shall be ground smooth, cleaned and free from grease. Welded areas shall receive 2 coats of heat resistant silver metalic enamel.
5. The contracter shall be responsible for the water tightness of the frame and cover installation and for procuring proper slopes for drainage. Prior to acceptance the contracter shall demonstrate, to the satisfaction of the Engineer, that these conditions have been met. One acceptable method would be to construct a temporary bulkhead around the access cover and submerse it for a period of 2 hours in the presence of the Engineer. Conditions for acceptance are no leaks nor puddling.
6. If the existing vapor barrier is damaged while chipping away the existing lightweight concrete, it shall be replaced per specifications.
7. Grind back existing rebar 1 in. and patch holes flush with Sika, High Mod L.V. epoxy. Sand surface flush with face prior to painting.
8. Concrete, exposed by the cutting operation, shall be painted. All chipped areas shall be filled with non-shrink grout and a 1.75 mil thickness coat of Koppers Company concrete surfacer shall be applied. Contractor to match color and texture of existing by using an existing sample.
9. 3/16" thick by 1 1/2" wide neoprene gasket shall be adhered to the flange of the channels with 3M 1300L neoprene adhesive. If the gasket is cut or damaged in any way from handling, it shall be replaced by the contractor.
10. Epoxy shall be Sika, High Mod L.V.



SECTION C-C

NOT TO SCALE

* Stitch weld all angles with 4045 Alloy Welding wire. Welds shall be 2"± 3" long, skip 4"-6" & staggered (both sides). (See note 4)

NOTES

1.- WHILE OVERALL BUILDING DIMENSIONS, SIZE AND LOCATION OF OVERHEAD DOORS, AND BUILDING ORIENTATION SHOULD BE MAINTAINED AS SHOWN IN THESE DRAWINGS, ALTERNATE ARRANGEMENTS ON ROOF FRAMING PLAN MAY BE SUBMITTED TO THE CITY FOR REVIEW; HOWEVER, THE CITY IS NOT OBLIGATED TO APPROVE SUCH ALTERNATES.

2.- A MINIMUM OF 1'-0" FROM THE CENTERLINE OF THE EXTERIOR COLUMNS TO THE EDGE OF THE SLAB SHALL BE MAINTAINED. IF THIS DIMENSION IS LESS THAN WHAT IS REQUIRED FOR THE BUILDING'S CONSTRUCTION, THE CONTRACTOR SHALL DETERMINE ALTERNATE DIMENSIONS GREATER THAN 1'-0".

3.- DIMENSIONS AND ELEVATIONS PERTAINING TO THE EXISTING BUILDING ARE ACCORDING TO THE BEST INFORMATION AVAILABLE. DIMENSIONS AND ELEVATIONS CRITICAL TO THE DESIGN OF NEW CONSTRUCTION SHOULD BE VERIFIED BY CONTRACTOR.

4.- VENTILATING LOUVER PANELS HAVE BEEN SIZED TO PROVIDE MORE THAN ADEQUATE VENTILATION. ALTERNATE AND EQUIVALENT ARRANGEMENTS OF LOUVER PANELS MAY BE SUBMITTED TO TO THE CITY FOR REVIEW; HOWEVER, THE CITY IS NOT OBLIGATED TO APPROVE SUCH ALTERNATES.

5.- DRIVEWAY AND PAVED AREA SHALL BE PAVED WITH 1" THICK TYPE T ASPHALTIC CONCRETE ON 6" THICK LIMEROCK BASE.

6.- ALL ELEVATIONS SHOWN ARE REFERENCED TO CITY OF TAMPA DATUM. TO CONVERT TO NATIONAL OCEAN SURVEY (NOS) DATUM SUBTRACT 0.15 FEET (0'-1 3/16").

7.- GRATED STORMWATER INLET TYPE "E" SHALL BE FLORIDA D.O.T. STANDARD.

8.- SHOP DRAWINGS DETAILING STEEL FRAMING SHALL BE SUBMITTED TO THE CITY FOR APPROVAL. SHOP DRAWINGS SHALL BE SIGNED AND SEALED BY ENGINEER WITH PROFESSIONAL REGISTRATION IN THE STATE OF FLORIDA.

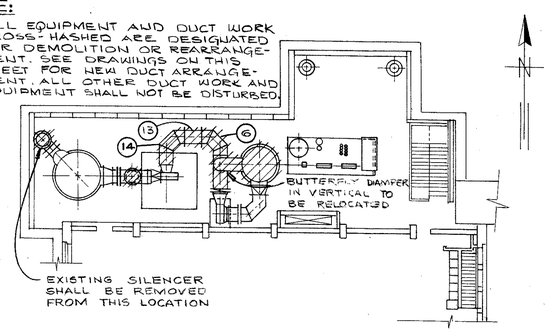
SAN CARLOS PUMPING STATION - PLAN - AT EL. 26'-6"

SCALE: 1/8" = 1'-0"

NOTE:

ALL EQUIPMENT AND DUCT WORK CROSS-HASHED ARE DESIGNATED FOR DEMOLITION OR REARRANGEMENT. SEE DRAWINGS ON THIS SHEET FOR NEW DUCT ARRANGEMENT. ALL OTHER DUCT WORK AND EQUIPMENT SHALL NOT BE DISTURBED.



DEMOLITION PLAN

SCALE: 1/16" = 1'-0"

NOTES:

1. ALL NEW WORK IS SHOWN IN BOLD LINE WORK. ALL EXISTING OR RELOCATED EQUIPMENT OR STRUCTURE IS SHOWN IN LIGHT LINE WORK.
2. ALL NEW WIRING AND DEVICES FOR THE NEW ORP CONTROLLER SHALL BE MOUNTED AND INSTALLED ON THE EXISTING NaOCl WET SCRUBBER TOWER AND IN THE COMBINATION RECTIFIER CONTROL PANEL-MCC IN ACCORDANCE WITH DIRECTIONS FROM PEPCON AND AS APPROVED BY THE ENGINEER.
3. ALL CONDUIT OUTSIDE OF THE PUMPING STATION SHALL BE RUN 7'-0" MIN. ABOVE SLAB AT EL. 11.92 SHALL BE NEATLY GROUPED AND SHALL BE WELL SUPPORTED PER SPEC, W-35.04 AND AS APPROVED BY THE ENGINEER, ROUTING OF CONDUIT SHALL BE AS APPROVED BY THE ENGINEER.
4. ALL CONDUIT INSIDE OF THE PUMPING STATION SHALL BE RUN ALONG WALLS, UP TO THE CEILING OR OTHERWISE, AS APPROVED BY THE ENGINEER, SO AS TO BE CLEAR OF ANY INTERFERENCES WITH EQUIPMENT, DOORWAYS AND THE LIKE.
5. DUCT WORK DESIGNATED WITH A CIRCLED NUMBER 9 IS EXISTING. SEE PEPCON DWG'S: 20.8-190 THROUGH 20.8-192.
6. ROOFING SHALL BE 20 YEARS BONDABLE 4-PLY BUILT-UP TAR AND GRAVEL AS MANUFACTURED BY THE KOPPERS CO. OR EQUAL. INSTALLATION SHALL BE IN CONFORMANCE WITH THE MANUFACTURER'S RECOMMENDATIONS.
7. EACH FLANGED CONNECTION IN THE DUCTWORK REQUIRES A 1/8-INCH THICK GASKET.
8. ALL NEW DUCTWORK SHALL BE PIGMENTED WHITE AND SHALL MATCH CONSTRUCTION OF EXISTING DUCT IN ALL RESPECTS.
9. DIMENSIONS OR ELEVATIONS DESIGNATED THUS ** SHALL BE VERIFIED BY FIELD MEASUREMENT PRIOR TO SUBMITTAL OF SHOP DRAWINGS. OTHER DIMENSIONS DEPENDENT UPON SUCH DIMENSIONS OR ELEVATIONS SHALL BE MODIFIED AS REQUIRED AND APPROVED IF FIELD MEASUREMENTS DIFFER FROM THOSE SHOWN. SUCH REQUIRED MODIFICATIONS SHALL BE AT NO CHANGE IN CONTRACT PRICE.

16. BLOWER MODIFICATIONS

The existing blower is a New York Blower, Model FE30, driven by a 50 HP, 1770 RPM, 460 V, 3 phase electric motor via 3 V-Belts on a 10.3-inch driver sheave and a 9.25-inch driven sheave at 50.7-inch centers, producing a fan speed of 1969 RPM and delivering 12,300 cfm of air at 14 inches W.C. static pressure.

Blower modifications include changing the blower drive sheaves and belts to produce a fan speed of 2100 RPM in order to deliver approximately 22,300 cfm of air at 3 inches W.C. static pressure.

SPECIFICATIONS

1. GENERAL

Unless shown or specified otherwise, all Workmanship and Materials shall conform to the Division 4L3 Contract Documents.

2. CAUSTIC SCRUBBER

The new Caustic Scrubber shall be designed to neutralize all acids and acidic compounds present in the treated air stream from the existing NaOCl Wet Scrubber Tower. The new Caustic Scrubber shall be of the size and shape shown, arranged to fit in the available space and have a retentiion time of approximately 3 seconds based upon an air flow rate of 12,300 cfm. The new Caustic Scrubber shall be designed to use a "once through" solution of NaOH and softened water to neutralize all acids and acidic compounds in the 12,300 cfm air stream based upon 100 percent humidity and an inlet pH range of 1.0 to 6.0. The pH of the spent chemical to drain shall be in the range of 7.5 to 8.0 Softened water consumption shall not exceed 1.0 gpm. The new Caustic Scrubber shall be constructed of FRP meeting the requirements of the Workmanship and Materials section headed "Duct work and Dampers" and shall be chemically resistant to the caustic solution. The new Caustic Scrubber shall be equipped with a chemical distribution device or devices, as required, to supply the caustic solution so as to cause intimate contact between the chemical and the air stream to provide the required acid neutralization. The new Caustic Scrubber shall be as manufactured and supplied by QUAD Environmental Technologies Corp., Highland Park, IL, or equal.

3. AIR COMPRESSOR

The new Air Compressor, shall be of the rotary screw type, having a minimum rated capacity of not less than 68 cfm at 110 psig, driven by a 15 HP 460 volt, 3 phase, 60 hertz electric motor. Final capacity and pressure requirements shall be as required by the manufacturer supplier of the new Caustic Scrubber. The new air compressor shall be a completely factory assembled package, housed in an acoustical enclosure, and shall be Model SK 18 as manufactured by Kaeser Compressors, Fredericksburg, VA, or equal.

An air compressor malfunction shutdown alarm contact shall be provided. The malfunction shutdown alarm contact shall be wired to a spare alarm point of the existing pumping station annunciator.

4. CHEMICAL METERING PUMP

The chemical metering pump shall be positive displacement, diaphragm type pump. Output volume shall be adjustable while pump is in operation from zero to maximum capacity. Adjustment shall be by means of readily accessible dial knobs, one for changing stroke length and the other for changing stroke frequency. Both knobs shall be located opposite the liquid handling end. Control of metering pump shall be selectable between internal and external pulsing by means of a 3-position HAND-OFF-AUTO switch. When in the HAND position, metering pump capacity shall be manually adjustable by means of the pump mounted knobs. When in the AUTO position, metering pump capacity shall be automatically adjusted by the automatic chemical pacing controls specified hereinafter. The chemical metering pump shall be capable, without a hydraulically backed diaphragm, of injecting chemicals against pressures up to 100 psig.

The size and capacity of the chemical metering pump shall be determined by the caustic scrubber manufacturer-supplier to provide the required quantity of NaOH to neutralize the compounds specified above under the heading "Caustic Scrubber."

The pump drive shall be totally enclosed with splash proof control panel and no exposed moving parts. Solid state electronic pulser shall be fully encapsulated. Electronics shall be housed in chemical resistant enclosure at the rear of the pump for maximum protection against chemical spillage. The chemical metering pumps shall be 120 volt, single phase 60 hertz.

Chemical metering pump housing shall be of chemically resistant glass fiber reinforced thermoplastic with a glass fiber reinforced polypropylene solenoid carrier. All exposed fasteners shall be stainless steel. Chemical metering pump valves shall be ball type, with ceramic balls seating on combination valve seat and seal ring. Valve seat and seal ring shall be renewable by replacing only the combination seat-seal ring. Pump head shall be of PVC material. Fittings and connections at pump head shall be PVC and/or polypropylene.

5. CAUSTIC SCRUBBER CONTROL PANEL

The Caustic Scrubber Control Panel shall be provided complete with all required piping, gauges, regulators, meters, valves and all other such devices required to dilute and deliver the required quanatity of liquid chemicals to the caustic scrubber. The Panel shall be arranged for wall mounting as shown and shall have fittings properly labeled and ready for field connection to water, chemicals and discharge piping.

6. ELECTRICAL CONTROL PANEL

The electrical control panel shall be a NEMA 3R enclosure constructed of minimum 12 gauge Type 304 stainless steel and shall be adequately reinforced to support all components mounted therein without distortion, bowing or deflection. The electrical control panel shall be provided with a continuously hinged (vertical along left side) door with a heavy duty handle with a hasp for padlock and a 3 point catch mechanism.

Devices to be provided in the electrical control panel shall include, but may not be limited to the following:

- Power disconnect switch with system On indicator light.
- Water On/Off switch and On indicator light (controls water solenoid valve).
- A chemical system power switch with On indicator light (provides power to metering pump and automatic chemical pacing controls).

All push buttons, selector switches and indicator lights shall be mounted on the Electrical Control Panel door and shall be suitable in all respects for outdoor service. All other devices shall be mounted within the panel. A wiring harness from door mounted devices shall be provided to permit the door to open a full 180 degrees. All required devices shall be neatly arranged on the Electrical Panel door and within the panel, as specified, and detailed drawings and schematics shall be submitted for approval.

7. AUTOMATIC CHEMICAL PACING CONTROLS

Automatic chemical pacing controls shall be furnished to provide reliable automatic adjustment of the chemical feed rates of the chemical metering pump so that the pH of the spent chemical to drain is in the range of 7.5 to 8.0. It is the sole responsibility of the Caustic Scrubber manufacturer to design, select and furnish such automatic chemical pacing controls. The automatic chemical pacing controls and a complete description of operation including wiring diagrams and schematics shall be submitted to the Engineer for approval.

8. PIPING, VALVES, GAUGES, SWITCHES AND OTHER DEVICES

Piping for water and compressed air shall be copper pipe and fittings meeting the requirements of the Workmanship and Materials section headed "Miscellaneous Pipe and Fitting". All pipe and fittings for chemical service shall be of plastic pipe of the proper type and formulation for the chemical service employed.

Valves for water and compressed air shall be of the types shown and shall meet the requirements of the Workmanship and Materials section headed "Valves." Valves in chemical piplines shall be of plastic of the proper type and formulation for the chemical service employed.

Gauges, switches and all other devices shown or required shall be constructed of corrosion resistant materials such as plastic or stainless steel and shall be suitable in all respects for the service employed.

A liquid level switch shall be provided to shut down the NaOH chemical metering pump when liquid level in the drum is low and provide a low level alarm signal to a spare alarm point in the existing pumping station annunciator. The switch shall be an encapsulated reed type activated by a foamed polypropylene float mounted in a PVC float tube. The switch assembly shall be mounted in a corrosion resistant glass reinforced polypropylene housing.

9. BUTTERFLY DAMPER

Butterfly dampers shall be constructed of glass fiber reinforced polyester (FRP). Dampers shall be "Xerxes" 36-inch FRP damper with stainless steel shaft stubs and teflon shaft bushings and locking external position handle, or equal. Dampers shall be provided with hand wheel operators, or when mounted more than 6'0" above the slab, with chain wheel operators.

10. DEMISTER

All demister device constructed of plastic shall be installed in the duct work as shown. The demister shall be designed to effectively remove moisture from the air stream. Head loss through the demister device shall not exceed 0.2 inches water column. A one inch PVC drain connection shall be provided in the bottom of the duct as shown, and be piped to the existing drain system.

11. ORP CONTROLLER

A new ORP Controller shall be provided for the existing NaOCl Wet Scrubber Tower. The ORP controller and associated ORP probe shall continuously check the oxidant concentration of the scrubbing solution. The controller shall adjust the dc output of the existing system rectifier to produce the required amount of sodium hypochlorite solution. The ORP probe shall be equipped with continuous cleaning capacity. The ORP probe and controller shall be as manufactured by the Pacific Engineering and Production Co. of Nevada.

12. WATER SOFTENER

The new water softener shall be Culligan Duplex model HB-45 or equal. Supply piping to the new water softener shall be connected to the existing hard water supply as directed by the Engineer.

13. SINK AND FAUCET

Stainless steel sink shall have overall dimension of 25 inches long, 22 inches wide and 10 inches deep, single bowl compartment, as manufactured by the Elkay Manufacturing Company, or equal. The basin shall be constructed of Type 302, 20-gauge stainless steel, with not less than 1-1/2-inch wide rim on all four sides. All inside corners of sink compartment, vertically and horizontally, shall be rounded to 1-inch radius, and corner intersections shall be spherical coves. The bottom of the sink compartment shall be pitched to a waste opening in a manner assuring complete drainage. The waste outlet shall be a center outlet. Exposed surfaces of the sinks shall receive a No. 4 finish. Overflows, plugs, strainers, tailpieces and related items shall be included.

The water faucet shall be one handle deck mount type with goose neck Model LK-2085-13L as manufactured by Elkay or equal."

14. SPARE PARTS

The following spare parts shall be provided:

a. One complete set of V-belts for the air compressor.
b. One complete NaOH chemical metering pump.

15. MANUFACTURER'S REPRESENTATIVE

The services of a qualified representative of the various manufacturers shall be provided to inspect the installation of the equipment, make any necessary adjustments, place it in initial trouble-free operation, and instruct the operating personnel in its operation and maintenance.

SITE PLAN
SCALE: 1" = 20'

NOTES:

1. Proposed Liner shall be 3/32" thick "Amer-Plate" plain sheet liner as manufactured by Ameron or approved equal. Installation of liner shall be performed in strick conformance with manufactures instructions for "Installing Plain Sheet Amer-Plate" unless otherwise approved by the City of Tampa, Sanitary Sewer Design Division.
2. Type 316 Stainless Steel strips 1/4" x 1 1/2" shall be installed as shown on drawings for support of Amer-Plate Liner.
3. Mechanical Anchors shall be, type 316 Stainless Steel, 1/2" Dia. Hilti heavy duty expansion anchors model HSL-M8 or approved equal. Anchors shall be installed no greater than 18" o.c. and in strick conformance with manufactures specifications. If at any time the steel reinforcement of the Pump station structure is hit during the installation of expansion anchors, the hole is to be filled with epoxy and the anchor location shifted to avoid the steel reinforcement. When installing anchors through existing aluminum angles or cast iron stop log channels insulating sleeves shall be used to prevent contact of dissimular metals.
4. All Stainless Steel strips and anchor bolts shall be welded over with Amer-plate liner to prevent entry of water and gases.
5. Contractor will be responsible for proper preparation of concrete and metal surfaces prior to installation of Amer-Plate liner as recommended by liner manufactuer.
6. Lift gate grooves to be installed in existing channels shall be surface mounted type as manufactured by Warminster Fiberglass or approved equal. Contracter shall supply to the Sewer Department 5' Warminster Fiberglass lift gates or approved equal. Exact size of lift gate shall be determined at time of construction.
7. Contractor will be responsable for by-passing of sewage as necessary in order to install lining. Contractor may submit, for approval, alternate schemes of by-pass pumping other than that shown on plans. Average Daily Flow = 4.5 mgd @ 17.6 Ft. of Head Peak Flow = 8 mgd @ 22.7 Ft. of Head
8. Contractor must maintain traffic at all times. All pavement disturbed by construction shall be replaced with 12" limerock compacted to 98% modified proctor and 2" of Type SI asphalt.
9. Contractor will be required to have a diesel powered back up pump on-site during by-pass pumping

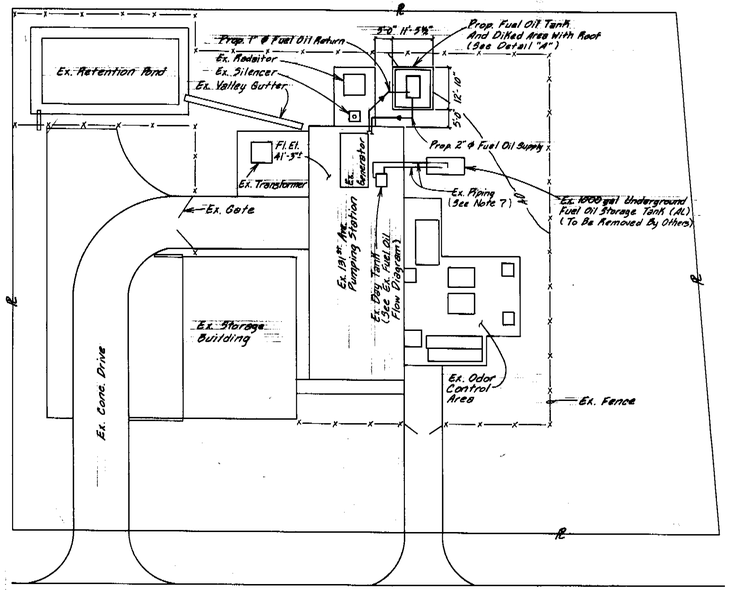
A-E 9-253

173-73e



SITE PLAN

SCALE 1" = 20'

NOTES

1. The Fuel Oil Tank, Diked Area, Piping and Venting Have Been Designed and Shall Be Fabricated and Constructed In Full Compliance With NFPA 30-87 As Enforced By the City of Tampa Fire Marshal And With DER 17-61. The Atmospheric Tank Will Store No. 2 Diesel Fuel Oil Which Is An NFPA Class II Combustible Liquid With A Minimum Rated Flash Point of 125°F.

2. The Tank Shall Be Built, Installed and Bear The Seal of UL142-1981, "Standard For Steel Aboveground Tanks For Flammable and Combustible Liquids." The Saddles Shall Be Continuously Welded To The Tank At The Factory To Prevent The Intrusion of Any Moisture Between The Two Surfaces. Stitch Welding Shall Not Be Permitted. The Tank and Saddles Shall Be Field Coated Per Specifications Prior To Anchoring.

3. The Tank Shall Be Provided With A Devise That Will Relieve Excessive Internal Pressure Caused By Exposure Fires Per NFPA 30-87-2-2.5, "Emergency Relief Venting For Fire Exposure For Aboveground Tanks". Such Device May Be A Self-Closing Manhole Cover, or One Using Long Bolts That Permit The Cover To Lift Under Internal Pressure, or An Additional or Larger Relief Valve or Valves.

4. The Finished Top of Tank Elevation Is Critical To The Installation To Prevent Siphoning To The Fuel Injectors. The Contractor Shall Establish The Floor Elevation of The Pumping Station As The Benchmark And Add 4'-0" To This To Establish The Top of Tank Elevation. After Tank And Saddle Selection, Shop Drawings Shall Be Submitted Detailing Exact Elevations For The Top of Tank, Top of Slab And Ground Elevation Assuming That The Pumping Station Slab Elevation Is 41'-3".

5. The Contractor Shall Submit Shop Drawings To Make The Link Seal Wall Penetrations Liquid Tight And Shall Fill Void Spaces With Non-Shrink Grout. The Pumping Station Penetration Area Shall Be Spot Painted To Match Existing In Color And Texture. The Top Slab Shall Be Sloped A Minimum of 1% Towards The Sump.

6. Piping Shall Be Schedule 40 Black Steel, Shall Be Hot Tape Wrapped Where Buried And Painted Where Exposed. Flanged Flexible Expansion Joints With S.S. Shrouds Shall Be Provide As Shown To Protect Against Excessive Stresses Arising From Settlement, Expansion or Contraction.

7. The Existing Piping From The Day Tank To The Buried Tank Is Routed Through The Floor Slab. The Piping Shall Be Ground 1" Below The Floor And Filled With A Flowable Non-Shrink Grout. Buried Piping Shall Be Terminated And Capped As Close As Possible To The East Wall of The Pumping Station.

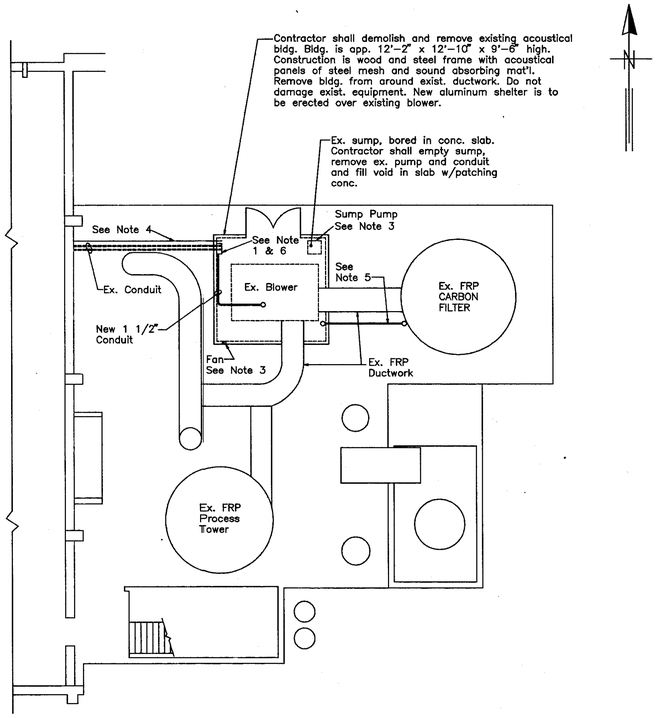
PROJECT LOCATION



PLAN – EXISTING ODOR CONTROL FACILITIES AT 131ST AVE. PUMPING STATION

SCALE: 1/8" = 1'-0"

ELECTRICAL NOTES

1. Existing blower control cabinet is to be removed.
2. Existing control conduit shall be plugged at LB, wire of sufficent length for future pulls shall be left in LB. Wire ends shall be taped.
3. Enclosure vent fan and sump and the receptacle and conduit for them shall be removed.
4. Air pipe shall be capped immediately outside of the pump station, and all exterior air equipment and piping shall be removed.
5. Remove 3/4" conduit with 1–#10 wire that runs to carbon filter (process tank).
6. Install a new; 100 AMP, stainless steel enclosed; circuit breaker type disconnect.
7. Existing blower motor is 40hp, 460 volt, 47 fla.
8. The existing motor feeder conduit and conductors may be reused if found in good condition and in conformance with the 1987 NEC–Article 430; otherwise, new equipment shall be provided and installed. No splices shall be allowed in conduits. A minimum #8AWG, green, equipment grounding conductor shall be provided and installed.

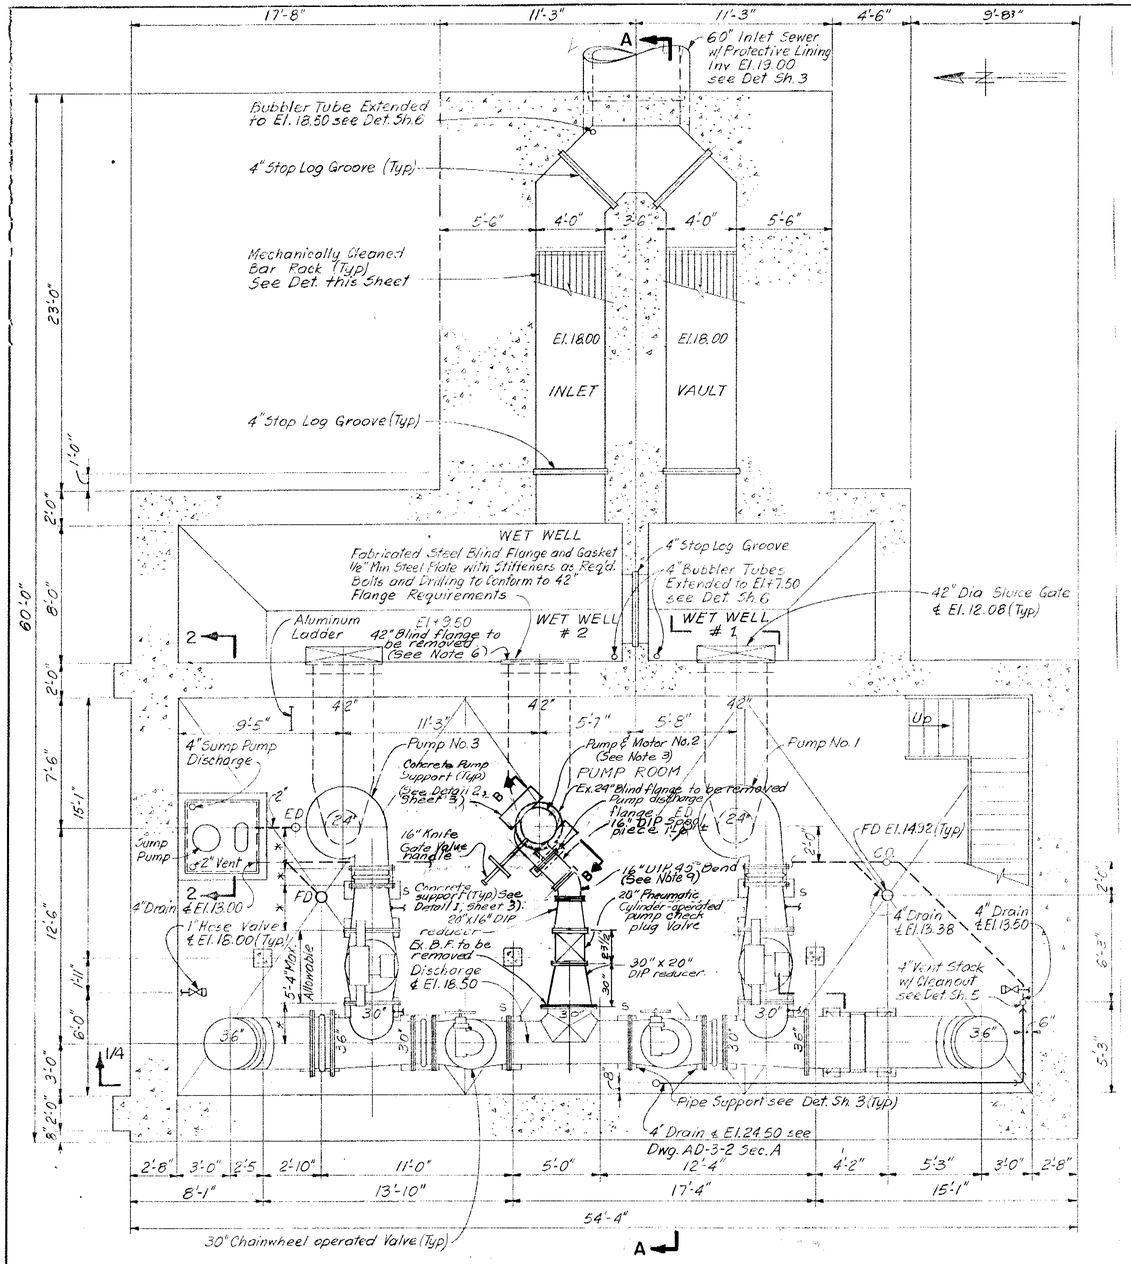
K&E 19-1293

173-419



PLAN AT EL 15.00
SCALE: 1/4"=1'-0"

NOTES

1. The Contractor shall verify all dimensions prior to submittal of piping layout drawings and ordering materials to assure proper fit of piping arrangement.
2. The Contractor is responsible for installing, leveling and aligning Motor and Pump. Procedures for installation, as outlined in the Hydraulic Institute Standards, most current edition, shall be adhered to.
3. Pump shall be 16" Fairbanks Morse Model B5741 or approved equal (See specifications). Pump discharge position shall be placed accordingly to fit the existing piping arrangement. See electrical specifications for Motor information.
4. Anchor bolts shall be submitted after selection of equipment. Anchor bolts shall be double nutted and finished with non-Shrink grout.
5. Air supply for Pneumatically operated valves shall be from existing station air. Arrangement of piping and connections to existing pipes shall be made by the contractor under the direction of D.S.S. personnel.
6. The D.S.S. will furnish Stop Logs to be used to divert the flow from Wet Well #2 to Wet Well #1 in order to remove the blind flange from intake No.2. The Contractor shall install and remove the Stop Logs and supply the pump and related equipment and piping for pumping down Wet Well #2. The Contractor shall furnish a temporary bulkhead, Pumping equipment and piping to handle any leakage from the stop logs that may occur.
7. Steel reducer shall be fabricated to suit the dimensions after selection of equipment and shall be A36 with a minimum thickness.
8. Concrete Pedestal shop drawings including flange support details shall be required.
9. The Contractor shall field verify the dimension from the pump suction center line to the discharge piping center line. The 45° bend may need to be fabricated steel to suit the dimensions.

NOTES

1. EXISTING FACILITIES ARE EITHER MARKED "EXISTING" OR ARE PRESENTED AS SCREENED LINES (LOWER CONTRAST). ITEMS INCLUDED IN THIS CONTRACT ARE IN BOLD LINE.
2. ALL ELECTRICAL WORK SHALL BE PERFORMED PER THE 1990 NATIONAL ELECTRICAL CODE (NEC) AND CHAPTER 5 OF THE CITY CODE.
3. ALL ELECTRICAL COMPONENTS AND SYSTEMS UTILIZED SHALL BE LISTED AND LABELED BY U.L. OR AN EQUIVALENT TESTING LABORATORY - WHERE APPLICABLE.
4. SECTION 5 OF THE EXISTING SEWAGE PUMPS CONTROL CENTER SHALL BE MODIFIED AS SHOWN TO HOUSE THE CONTROLS AND VARIABLE FREQUENCY DRIVE (VFD) FOR THE PROPOSED SEWAGE PUMP NO. 2. THE INSIDE DIMENSIONS ARE 81"x36"x20".
5. THE LOWER HALF OF SECTION 7 OF THE SEWAGE PUMPS CONTROL CENTER MAY BE USED TO HOUSE ADDITIONAL PUMP NO. 2 CONTROLS, IF NECESSARY.
6. THE ROBICON CORP LIQUID LEVEL CONTROLS (LLC) IN SECTION 2 OF THE SEWAGE PUMPS CONTROL CENTER SHALL BE MODIFIED TO FACILITATE PUMP NO. 2 CONTROL. A "VARIABLE SPEED BOARD" AND AN "ON - OFF BOARD" SHALL BE BE PROVIDED AND INSTALLED BY THE CONTRACTOR.
7. THE EXISTING ANNUNCIATOR NO. 2 SHALL BE MODIFIED AS SHOWN. EXISTING CONDUITS C-1A AND C-1B AND ANY SPARE CONDUCTORS THEREIN MAY BE UTILIZED TO MECHANIZE THIS DESIGN.
8. EXISTING CONDUIT SLEEVES THROUGH THE FLOOR OF THE SEWAGE PUMPS CONTROL CENTER SHALL BE UTILIZED IN THE P25 AND CP25 MECHANIZATION. CORE DRILL THE INTERMEDIATE FLOOR, AS REQUIRED, TO TERMINATE CONDUITS AT PUMP ROOM ELEVATION.
9. DYNAMICALLY BALANCE THE PUMP SYSTEM TO MEET INDUSTRY STANDARD GUIDE LINES. ENSURE THAT THE NATURAL FREQUENCY OF THE PUMP SYSTEM IS NOT WITHIN 25% OF THE POSSIBLE OPERATING SPEEDS.

GENERAL NOTES

1. This Fence to be used generally in urban areas.
2. This Fence shall be in accordance with Section 550 of F.D.O.T. Standard Specifications.
3. Cloth, line fabric, posts, rails, truss rods, tension wires, tie wires, stretcher bars, gates and all miscellaneous fittings and hardware shall meet the requirements of AASHTO M 181, and as specified below. Stipulated AASHTO and ASTM identify current reference.
4. Fence Component Options:
   - A. Line post options:
     - (1) Galvanized steel pipe, Schedule 40 - 2" nominal dia. galvanized at the rate of 1.8 oz. per sq. ft.) ASTM A53 Table 2, ASTM A120, and AASHTO M 181.
     - (2) Aluminum coated steel pipe - 2" nominal dia. coated at the rate of 0.40 oz. per sq. ft.) - Spec. Subarticle 966-1.5.
     - (3) Aluminum alloy pipe - 2" nominal dia.) ASTM B 241 or B 221, Alloy 6063, T6.
     - (4) Steel H-Beam - 1 1/4" x 1 1/4" Galv. (1.8 oz./s.f.) AASHTO M 181 and Detail.
     - (5) Aluminum alloy H-Beam - 1 1/4" x 1 1/4" Detail.
     - (6) Steel C - 1 1/4" x 1 1/4" Galv. (1.8 oz/s.f.) AASHTO M 181 and Detail.
     - (7) Steel U.S.S. Sections - Galv. pipe - 1 1/2" nominal dia.) - Spec. Subarticle 966-1.5 and ASTM F1083 Type I industrial fence.
   - B. Corner, end, and pull post options:
     - (1) Galvanized steel pipe, Schedule 40 - 4" nominal dia. galvanized at the rate of 1.8 oz. per sq. ft.) - ASTM A53 Table 2, ASTM A120, and AASHTO M 181.
     - (2) Aluminum coated steel pipe - 4" nominal dia. coated at the rate of 0.40 oz. per sq. ft.) - Spec. Subarticle 966-1.5.
     - (3) Aluminum alloy pipe - 4" nominal dia.) ASTM B 241 or B 221, Alloy 6063, T6.
     - (4) Resistance welded steel pipe - 3" nominal dia.) - Spec. Subarticle 966-1.5 and ASTM F1083 Type I industrial fence.
   - C. Rail options:
     - (1) Galvanized steel pipe, Schedule 40 - 1 1/2" nominal dia. galvanized at the rate of 1.8 oz. per sq. ft.) - ASTM A53 Table 2, ASTM A120, and AASHTO M 181.
     - (2) Aluminum coated steel pipe - 1 1/2" nominal dia.) - ASTM B 241 or B 221, Alloy 6063, T6.
     - (3) Aluminum alloy pipe - 1 1/2" nominal dia.) - Spec. Subarticle 966-1.5.
     - (4) Resistance welded steel pipe - 1 1/2" nominal dia.) - Spec. Subarticle 966-1.5 and ASTM F1083 Type I industrial fence.
   - D. Chain link fabric options:
     - (1) No. 9 gage steel wire (2" mesh) galvanized at the rate of 1.8 oz. per sq. ft. - AASHTO M 181.
     - (2) Polyvinyl Chloride Coated Fabric: See Table Below.
     - (3) Aluminum coated steel wire: AASHTO M 181.
   - E. Tension wire options:
     - (1) No. 7 gage steel wire galvanized at the rate of 1.8 oz. per sq. ft.) AASHTO M 181.
     - (2) Aluminum alloy wire conforming to the requirements of ASTM B 211, Alloy 6052, Temper T81 or T91, with a min. diameter of 0.207" or larger.
     - (3) No. 7 gage aluminum coated steel wire coated at the rate of 0.40 oz. per sq. ft.) AASHTO M 181.
   - F. Tie wire and top ring options:
     - (1) No. 9 gage steel wire galvanized at the rate of 1.8 oz. per sq. ft.
     - (2) Aluminum alloy wire conforming to the requirements of ASTM B 211, Alloy 6052, Temper T81 or T91, with a wire diameter of 0.047" or larger.
     - (3) No. 7 gage aluminum coated steel wire coated at the rate of 0.40 oz. per sq. ft.
5. Unless a specific material is called for in the plans the Contractor may elect to use either a single type of material or a combination of material types from the component options listed above. Considerations of optional materials are restricted as follows: (a) Only one fabric optional material may be used between corner and/or end post assemblies. (b) Only one line post optional material will be used between corner and/or end post assemblies. (c) Pull post assemblies shall be optional materials identical to those of the line post optional material or the corner and end post assembly optional materials, but, pull post assemblies shall be the same optional material between any set of corner and/or end post assemblies.
6. Concrete for items shall be Class I as specified in Section 346 of the Standard Specifications for Road and Bridge Construction published in 345 S.J., 340 O and 340-1 shall not apply. Batches for Class I concrete may be proportioned by volume and/or by weight.
7. Line posts are to be set in concrete as detailed above or by the following methods:
   - (a) In accordance with special details and/or as specifically described in the contract plans and specifications.
   - (b) In accordance with ASTM F567-94 Subsections 4.4 through 4.7 and 4.9 and F.O.D. as approved by the Engineer.
   - (c) In soils that are firm, well-drained and suitable: For full stable embankment (F.S.E.) areas, post holes may be driven in lieu of excavation, when approved by the Engineer. Driving will not be permitted in rock. Driven holes shall be 1" to 2" smaller than the nominal dimension of the post to be set and, for each 1" of fence height above 6' the depth shall be set an additional 6". In depth. Posts shall be protected to prevent damage from driving. Damaged posts shall be removed and replaced as directed by the Engineer without additional cost to the Department.
   - (d) Posts mounted on concrete structures or solid rock shall be mounted in accordance with the base plate details "Fence Mounting On Concrete Endwalls And Retaining Wall", Sheet 5 of 5) or, by embedment in accordance with Section 550 of F.D.O.T. Standard Specifications.

   End, pull and corner post assemblies shall be set in concrete as detailed above for all soil conditions other than solid rock. Posts within assemblies that are located on concrete structures or solid rock shall be set by base plate or by embedment as prescribed under (d) above, for that condition.

   Line and assembly posts set in concrete bases shall be set an additional 3" in depth for each 1'-6" fence height greater than 6'.
8. Pull posts shall be used at breaks in vertical grades of 15° or more, or at approximately 330' centers except that this maximum interval may be modified by the Engineer on curves where the degree of curvature is greater than 3°.
9. Corner posts are to be installed at all horizontal breaks in fence of 15° or more and as required at vertical breaks over 15° as determined by the Engineer.
10. Unless sliding gates or special gates are called for in the plans, all gates shall be chain link swing gates including all hardware requirements described above as approved by the Engineer. Payment shall include the furnishing of all gates, all necessary hardware for installation and any additional length and/or size for gates over the standard. Gates shall be paid for under the contract unit price for Fence Gates, Type B, Each, Pay Item No. 550-70-nnn.
11. Unless otherwise specified in the plans, chain link fabric, tie wires, all attachments fittings and hardware, and Class I concrete to be furnished in the cost for Fencing Type B, 6'-0". The standard 6' high fence shall be paid for under the contract unit price for Fencing Type B, 6'-0", Per Foot, Pay Item No. 550-2. Fence having other height and/or the components and gates and attachments shall be paid for under the contract unit price for Fencing Type B 1—.1, LF, Pay Item No. 550-2-nnn.

    Corner post assemblies shall consist of one corner post, two braces, two truss rods, and all necessary fittings and hardware as detailed above and shall be paid for under the contract unit price for Corner Post Assembly I Type B Fence I, Each, Pay Item No. 550-3-nnn.

    Pull post assemblies shall consist of one pull post, two braces, two truss rods and all necessary fittings and hardware, as detailed above and shall be paid for under the contract unit price for Pull Post Assembly I Type B Fence I, Each, Pay Item No. 550-5-nnn.

    End post assemblies shall consist of one end post, two braces, two truss rod and all necessary fittings and hardware as detailed above and shall be paid for under the contract unit price for End Post Assembly I Type B Fence I, Each, Pay Item No. 550-6-nnn.
12. Line posts are to be installed at spacings not to exceed 10'-0" centers.
13. Fence shall be installed with the bottom of the fabric 2" above the ground line.
14. Gates shall be installed at locations shown in the plans or as directed by the Engineer.
15. Fence shall be erected on the right-of-way line unless otherwise directed by the Engineer.
16. Fence shall be erected to follow the ground line.
17. Fence shall be erected to provide a drive 1'0 over the top of posts and in either multiple or single gate installations.

Attachments to be paid for under the contract unit price for Fencing, Type B 1 With Barb Wire Attachment) LF, Pay Item No. 550-2-nnn.

NOTES

Attachments to be used only when called for in the plans.
Attachments to extend in direction of roadway, Unless otherwise noted for in plans, direction of roadway will be as follows:
(a.) Outward from adjacent business right of way line.
(b.) Outward on residential right of way line.
(c.) Outward from utilities and boundary facilities located within highway right of way.
(d.) Outward from lateral ditches, outfalls, connection basins, canals, borrow areas and similar support facilities.
(e.) Inward on pedestrian ways.

The use of barb wire shall be limited to provide a drive 1'0 over the top of posts and in either multiple or single gate installations.

Attachments to be paid for under the contract unit price for Fencing, Type B 1 With Barb Wire Attachment) LF, Pay Item No. 550-2-nnn.

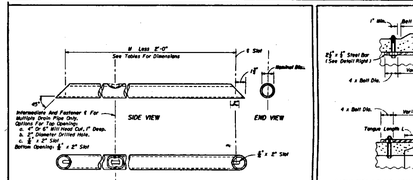
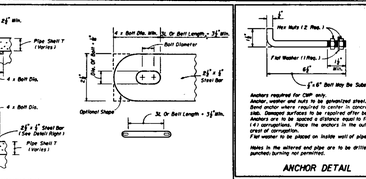
Project No. — Sheet No. 10 — Total Sheets 1 of 6 — 273

F.A.P.A. Approvals



GRATE DETAIL FOR SINGLE & MULTIPLE DRAIN PIPE

See General Notes, Sheet 6.



All bars, bolts, nuts and washers are to be galvanized steel. Bolt diameters shall be 3/4" for 0" to 36" pipe and 1" for 42" to 60" pipe.
Two connectors required per joint, located 60° right and left of bottom center of pipe.
Bolt holes in pipe shell are to be drilled.

SIDE DRAIN MITERED END SECTION DETAILS FOR CONCRETE & CORRUGATED METAL PIPE

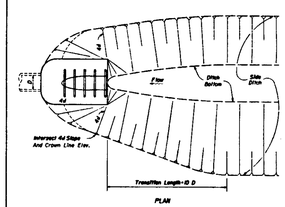
Designed by	Drawn by	Checked by	Approved by

Project No. — Sheet No. 10 — Total Sheets 5 of 6 — 273

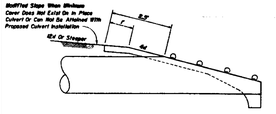
F.A.P.A. Approvals

GENERAL NOTES

1. Unless otherwise designated in the plans, concrete pipe mitered end sections may be used with any type of side drain pipe; corrugated sheet pipe mitered end sections may be used with any type of side drain pipe except aluminum pipe; and, corrugated aluminum mitered end sections may be used with any type of side drain pipe except sheet pipe. When bituminous coated metal pipe is specified for side drain pipe, mitered end sections shall also be of bituminous coated metal. Place the anchors in the outside trough of corrugations.
2. Concrete pipe used in the assembly of mitered end sections shall be of selective lengths to avoid excessive cutting.
3. Corrugated metal pipe galvanizing that is damaged during bending and perforating for mitered end section shall be repaired.
4. That portion of corrugated metal pipe in direct contact with the concrete slab shall be bituminous coated prior to placing of the concrete.
5. Corrugated polyethylene pipe (CPE) for side drain application of 6", 8" or 24" diameter shall utilize either corrugated metal or concrete mitered end sections. When used in conjunction with corrugated metal mitered end sections, connection shall be by either a formed metal band specifically designated to join CPE pipe and metal pipe or other adapter approved by the State Drainage Engineer. When used in conjunction with a concrete mitered end section, connection shall be by concrete jacket constructed in accordance with Index No. 280.
6. Where existing multiple side drain pipes are spaced other than the dimensions shown in this detail, or have non-uniform centers, the mitered end sections will be constructed either separately as single pipe mitered end sections or collectively as multiple pipe end sections as directed by the Engineer, however, mitered end sections will be paid for each, based on each independent pipe end.
7. In addition to the requirements of Section 430-4, side drain culverts shall comply with the bedding and backfill requirements shown on Index No. 280.
8. The reinforced concrete slab shall be constructed for all sizes of side drain pipe and cast in place with Class I concrete.
9. Round pipe size 30" or greater, pipe-arch size 35" x 24" or greater and elliptical pipe 48" x 30" or greater shall be grated unless exempted in the plans. Smaller sizes of pipe shall be grated only when called for in plans. The lower grate on trailing downstream ends on divided highways shall be omitted.
10. Grates are to be fabricated from steel ASTM A 53, Grade B, pipe. The lower grate on all traffic approach ends shall be Schedule 80 and all remaining grates shall be Schedule 40.
    Grates subject to salt free and corrosive free environment may be fabricated from galvanized pipe, with bars welded required during fabrication required as specified in Section 962, Standard Specifications, or fabricated from black pipe, and hot dipped galvanized after fabrication in accordance with ASTM A 123.
    Grates subject to salt water or highly corrosive environment shall be hot dipped galvanized after fabrication in accordance with ASTM A 123.
11. Ditch transitions shall be used on all grades in excess of 3% as directed by the Engineer.
12. The project engineer shall contact the District Drainage Engineer for possible alternate treatment prior to constructing side drain mitered end sections where a minimum spacing of 30' will not result between the toe points of the mitered end sections.
13. The cost of all pipe (s), grates, fasteners, reinforcing, connectors, anchors, concrete, sealants, jackets and coupling bands shall be included in the cost for the mitered end section. Sodding shall be paid for separately under the contract unit price for Sodding, SY, Pay Item No. 570-1-nnn
14. Mitered end sections shall be paid for under the contract unit price for Mitered End Section (SD-1, Each, Pay Item No. 430-984-bxx, based on each independent pipe end.



DITCH TRANSITION



PERMISSIBLE PAVEMENT MODIFICATION FOR CLASS I TURNOUTS

DESIGN NOTES

1. In critical hydraulic locations, grates shall not be used until potential debris transport has been conducted by the drainage engineer and appropriate adjustments made. Ditch grades in excess of 3% or pipe with less than 1.5' of cover and grades in excess of 1% will require such an evaluation (General Note 9).
2. The design engineer shall determine, highly corrosive locations and specify in the plans when the grates shall be hot dipped galvanized after fabrication (General Note 10).
3. The design engineer shall determine and designate in the plans which alternate types of mitered end section will not be permitted. The restriction shall be based on corrosive or structural requirements.

NOTES

1) The Contractor shall arrange the work to minimize the time that the pumping station will not have an odor control system in operation. The existing odor control system shall remain in operation until the construction of the proposed system is completed. The Contractor shall then connect the new system to the opening in the wet well and place the existing system out of operation. The existing system shall remain intact until all performance tests on the new system have been successfully completed.

2) The Contractor is responsible for obtaining all field measurements and verifying the locations, elevations, and dimensions of all existing piping, structures, and other features affecting his work prior to submittal of shop drawings or starting construction.

3) All equipment, piping, structures, etc. indicated for removal shall be removed and either delivered to the Howard F. Curren Treatment Plant or properly disposed by the Contractor. In general, all items constructed of metal or aluminum shall remain the property of the City and shall be delivered to the treatment plant. The existing bleach storage tank and caustic storage tank shall also be delivered to the treatment plant. The Contractor shall dispose all other items.

4) The existing carbon tank contains approximately 2–ft of activated carbon. The Contractor shall be responsible for removing the carbon and properly disposing it. The carbon may be delivered to the treatment plant if no other suitable disposal site can be found.

5) The existing concrete pedestals for the scrubber tower, bleach tank, carbon tank, and blower shall be removed flush with the existing floor. All rebar or anchor bolts cast into the existing floor that are remaining after the removal of the concrete pedestals and other equipment shall be ground back a minimum of 1–inch and the hole filled with epoxy or grout. Areas of the floor that are disturbed by the removal of the concreteb pedestals and other equipment shall be made smooth.

6) The existing air compressor building and the two air compressors inside the building shall be removed. Air piping between the air compressors and the existing odor control system shall also be removed. Air piping that extends into the building and that is connected to the pumping station air system shall be capped at a suitable location inside the pumping station.

7) The Contractor shall submit a detailed layout of the proposed equipment and the containment area for the approval by the Engineer. The equipment shall be arranged to provide maximum access to all components. The dimensions of the proposed containment area shall be sufficient to accommodate all components of new odor control system and provide a minimum 4–ft between the containment walls and each system component. Height of containment curb shall be as required to provide a containment volume that is 110% of the volume of the ~~largest chemical storage vessel~~ Sump of the largest scrubber tower. (Per addendum 2)

8) Soil below the proposed concrete containment area shall be compacted to 95% maximum density per AASHTO T–180.

9) The existing concrete containment curb shall be removed and reconstructed as required to suit the proposed odor control equipment. Width and height of new containment curb shall match the existing curb. New curb shall be constructed of 4000 psi concrete and shall be reinforced with one #4 bar installed parallel to the curb. Curb shall be anchored to the existing concrete slab using #4 dowel @18" O.C. drilled and epoxied into the existing concrete (4–inch minimum embedment). New concrete shall be bonded to existing concrete using a high strength bonding agent.

10) Locations and number of floor drains shown on the plans for the proposed containment area are approximate. Contractor may adjust locations and provide additional drains to suit the layout of the selected equipment and ensure proper drainage. Floor drains and clean–outs shall be constructed of PVC. Floor drain piping shall be schedule 80 PVC and shall have a minimum slope of 1/8" per foot. Drain piping shall be connected to the existing drain piping located inside the wet well as shown on the plans. If the connection requires removing a portion of the existing concrete mower strip or containment curb, the concrete shall be removed and repaired as follows: Existing concrete shall be removed by saw–cutting the perimeter of the area to be removed. Mower strip shall be repaired with 4000 psi concrete reinforced with #4 @ 12" O.C.E.W. Thickness of the new concrete shall match the existing concrete. Containment curb shall be replaced in accordance with note 9.

11) The scrubber tower, blower, and chemical recirculation pumps, for the odor control system shall be securely mounted to concrete house keeping pads. The pads shall be constructed of 4000 psi concrete reinforced with 4"X4"–W6XW6 WWF. The pads shall be a minimum of 6–inches high and shall have sufficient length and width to completely support the proposed equipment. The pads shall be anchored to the concrete floor by providing No. 4 dowels at 12" O.C.E.W. drilled and epoxied or cast into the concrete floor (minimum 4–inches embedment).

12) All ductwork shall be constructed of fiberglass reinforced plastic (FRP). The ductwork and exhaust stack shall be supported and anchored as required to withstand a 120 mph wind load and all other loads that may be imposed on the ductwork. Hangers and supports shall be constructed of either vinylester FRP or 316 stainless steel. All guy wires, fasteners, bolts, nuts, washers, anchors, etc. shall be constructed of 316 stainless steel. The Contractor shall submit shop drawings for the supports and hangers.

13) The existing wet well intake duct transition piece shall be removed and replaced from the connection to the existing above ground ductwork to the first flanged joint below the wet well ceiling. Remaining ductwork through the wet well floor shall remain. New transition piece shall be constructed of FRP. The configuration and dimensions of the new transition piece shall be as required to connect to the remaining ductwork in the wet well and to the new ductwork for the proposed odor control system. The intake duct shall also be equipped with a flange to seal the annular space between the duct and the opening in the wet well ceiling. Contractor shall submit shop drawings for the transition piece before starting construction.

14) The Contractor shall install chemical storage tank fill pipes to allow the tanks to be filled form the location shown on the plans. Fill pipe shall be constructed of CPVC and shall have a minimum diameter of 2–inches. Ball valves and check valves shall be constructed of CPVC and shall be equipped with unions for removal. Anchors, supports, and hangers used to secure the pipe shall be constructed of FRP or stainless steel. Fill pipes shall connect to the top of the storage tanks. Contractor shall submit layout of the fill pipes prior to beginning construction.

15) Contractor shall install a new 2–inch water line and 2–inch backflow preventer assembly to provide make–up water to the new odor control. The new water line shall be connected to the existing 2–inch water line downstream of the existing backflow prevent located on the south side of the pumping station (see sheet 3). Water line shall be constructed of schedule 80 CPVC and shall be installed with a minimum of 30–inches of cover. Grassed areas disturbed by the installation shall be re–sodded. If the installation requires removal of the existing concrete driveway, the concrete shall be removed by saw–cutting along the trench edges. Concrete driveway shall be replaced with 4000 psi concrete reinforced with 4"x4" W6xW6 WWF. Existing turf block driveway shall be removed and replaced in kind. Back flow preventer assembly shall meet City of Tampa Water Department standards. Existing 1–inch water supply shall be removed and capped.

16) During the construction, the Bioxide tank and feed system must remain in operation. If the construction requires relocation of the tank, the Contractor shall coordinate the relocation with Treatment Plant personnel. The relocation and connections for the feed system shall be performed by others.

17) Contractor shall remove and replace the existing emergency eyewash/shower system. Location of new system shall be determined by the Engineer at the time of construction.

18) Contractor to provide 3/4" water supply line and a Walts #8 hose valve/vacuum breaker with 3/4" hose thread for washdown purposes in the new containment area. Water supply shall be connected to the new 2" water line.

ENCLOSURE/CABINET FOR CHEMICAL METERING PUMPS

NOTES

1) These drawings are intended to show the general layout and design of the chemical metering pump enclosures/cabinet. Dimensions of the enclosures/cabinet shall be determined by the Contractor based on final selected equipment. Enclosure/cabinet shall either be designed to house all metering pumps or seperate cabinets shall be provided to house the metering pumps for the sodium hypochlorite supply system and the metering pumps for the sodium hydrocide supply system.

2) Enclosures shall be constructed of chemical resistant FRP with a minimum thickness of 1/4–inch. Enclosures shall be weather proof and shall be designed to support the chemical metering pumps and a windload of 120 mph.

CONCRETE COLUMN SUPPORT

N.T.S.

NOTES

1) Drawings for the aluminum awning are intended to show the general concept and minimum dimension for the structure. The Contractor shall provide final design in accordance with the Contract Specifications and the Southern Building Code. Contractor shall submit design and details of the structure prior to purchasing materials and fabrication.

2) Structural aluminum beams and posts shall be manufactured structural shapes of Alloy 6061–T6, 6063, or other alloy approved by the Aluminum Association for structural purposes.

3) All metal surfaces that contact concrete surfaces shall be coated with 2–coats of coal tar epoxy applied to the metal surface.

4) Fasteners for aluminum structural members and roofing panels shall either be stainless steel or aluminum. Plated or coated steel fasteners shall not be used.

NOTES FOR SHEETS E5 AND E6:

1. ALL MOTOR RATINGS, CONDUIT & CONDUCTOR SIZES, AND RELATED CONTROL EQUIPMENT SHOWN ARE APPROXIMATE. ACTUAL COMPONENTS SHALL BE DETERMINED BY THE ODOR CONTROL EQUIPMENT DESIGNER/SUPPLIER AND ELECTRICAL CONTRACTOR. SUBMIT SHOP DRAWINGS TO THE ENGINEER FOR APPROVAL PRIOR TO FABRICATION.
2. ALL CONDUITS SHALL ENTER BOXES, ENCLOSURES, ETC., FROM THE BOTTOM, IF PRACTICABLE; OTHERWISE, THE HUB AREA SHALL BE PROTECTED FROM STANDING WATER USING ALTERNATE, APPROVED, TECHNIQUES.
3. IF A PROGRAMMABLE LOGIC CONTROLLER (PLC) IS USED IN THE MECHANIZATION OF THIS DESIGN, IT SHALL BE A G.E. FANUC, AS SPECIFIED.
4. ALL ELECTRICAL EQUIPMENT, CONTROLS, AND INSTRUMENTATION SHALL BE AS SHOWN, SPECIFIED OR REQUIRED.
5. TANK LEVEL TRANSMITTERS SHALL BE SUBMERSIBLE PRESSURE SENSOR TYPE AS MANUFACTURED BY DEVAR. DIGITAL PANEL METERS SHALL BE 3.5 DIGIT WITH TRANSMITTER EXCITATION OUTPUT-- NEWPORT 202A-P-E, OR EQUAL. PROVIDE NEMA 4X COVERS. PROVIDE 4-20MA SIGNAL ISOLATORS/AMPLIFIERS FOR SCADA SIGNALS.
6. MODIFY EXISTING ANNUNCIATOR WINDOWS AND ALARM ELECTRONICS TO FACILITATE PROPOSED "ODOR CONTROL STAGE-1 FAULT", "ODOR CONTROL STAGE-2 FAULT", AND "EXHAUST BLOWER FAULT" INDICATION. PROVIDE 4-20MA SIGNALS TO SCADA FOR PH-1, PH-2, ORP-2, NaOH LEVEL, AND NaOCl LEVEL. CITY INSTRUMENTATION PERSONNEL WILL MAKE FINAL SCADA RTU CONNECTIONS.
7. BOND THE PROPOSED CONTROL CABINET SHELTER TO THE CONTROL CABINET USING MINIMUM #4AWG STRANDED CONDUCTORS. ENSURE THAT ALL METAL SHELTER COMPONENTS ARE ADEQUATELY BONDED TOGETHER.

CONSTRUCTION W.O.

SHEET 1 OF 7

C:\ACAD2000\DWGS\P5165-SITE 1=40

336-46

NOTES

1. THIS SET OF DRAWINGS INCLUDES FACSIMILES OF THE "AS-BUILT" DRAWINGS FOR THE ORIGINAL 131ST AVENUE PUMPING STATION THAT HAVE BEEN MODIFIED TO ILLUSTRATE THE WORK OF THIS CONTRACT. NOTES PERTAINING TO THE WORK OF THIS CONTRACT ARE ENCLOSED IN "CLOUDS" ON THESE DRAWINGS. OTHER ITEMS AND DETAILS REFER TO THE ORIGINAL PUMPING STATION AND ARE INCLUDED FOR INFORMATION ONLY.

2. ⚠1 IT IS THE ENGINEER'S INTENT THAT THE EXPANSION JOINT REPLACEMENT AND PUMPING STATION SHUTDOWN ARE SCHEDULED AND ACCOMPLISHED WITHOUT THE NEED FOR BY-PASS PUMPING OR LINESTOPPING. IN ORDER TO ACCOMPLISH THIS, THE CONTRACTOR MAY BE REQUIRED TO REMOVE AND REPLACE THE EXISTING EXPANSION JOINTS UNDER RAW SEWAGE BACKFLOW CONDITIONS DURING WHICH AN UNKNOWN QUANTITY OF THE FORCEMAIN'S CONTENTS WILL FLOW BACK TO THE STATION. THE CITY HAS PERFORMED TRIAL SHUTDOWNS OF THE 131st AVENUE PUMPING STATION AND DETERMINED THAT THE STATION CAN BE SHUT DOWN FOR A DURATION OF UP TO 10 HOURS DURING PERIODS OF LOW FLOW AND NO RAINFALL. DURING THE TRIAL SHUTDOWNS, THE PUMPS WERE TURNED OFF AND THE FORCEMAIN'S CONTENTS WERE ALLOWED TO FLOW BACK THROUGH THE PUMPS, INTO THE WETWELL AND TO SURCHARGE THE INFLUENT GRAVITY SEWERS. AFTER A PERIOD OF 1 TO 2 HOURS, THE BACKFLOW WAS OBSERVED TO DIMINISH TO A MORE MANAGEABLE RATE, HOWEVER, IT MAY NOT BE POSSIBLE TO DRAIN THE FORCEMAIN COMPLETELY AND COMPLETE THE WORK DURING ONE SHUTDOWN. IT IS THE ENGINEER'S INTENT THAT THE CONTRACTOR UNDERTAKE THE REMOVAL AND REPLACEMENT OF THE EXPANSION JOINTS AFTER THE FORCEMAIN HAS BEEN ALLOWED TO PARTIALLY DRAIN. DURING THE REMOVAL AND REPLACEMENT OF THE EXPANSION JOINTS, THE FORCEMAIN'S CONTENTS WILL CONTINUE TO DRAIN INTO THE PUMPING STATION AND THROUGH THE STATION'S FLOOR DRAINS TO THE WETWELL. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO ASSESS THE BACKFLOW CONDITIONS AND DETERMINE THE WORK METHODS AND NUMBER OF PUMPING STATION SHUTDOWNS REQUIRED FOR THE REMOVAL AND REPLACEMENT OF THE EXPANSION JOINTS. THE CONTRACTOR SHALL PROVIDE ANY EQUIPMENT AND TRAINING THAT MAY BE NECESSARY FOR THE SAFETY AND HEALTH OF THE WORKERS THAT ARE EXPOSED TO RAW SEWAGE CONDITIONS. FOLLOWING THE EXPANSION JOINT REPLACEMENT, THE CONTRACTOR SHALL CLEAN AND DISINFECT THE AREAS OF THE PUMPING STATION SUBJECTED TO RAW SEWAGE SPILLS.

3. THE CONTRACTOR SHALL SCHEDULE THE PUMPING STATION SHUTDOWN FOR A PERIOD OF LOW FLOWS (LATE EVENING THROUGH EARLY MORNING) AND NO RAINFALL. THE CONTRACTOR SHALL COORDINATE THE SHUTDOWN WITH SEWER DEPARTMENT PERSONNEL. SEWER DEPARTMENT PERSONNEL WILL SHUT DOWN UPSTREAM PUMPING STATIONS AND MONITOR SEWAGE LEVELS AT THE PUMPING STATIONS AS WELL AS AT MANHOLES OF THE INFLUENT GRAVITY SYSTEM IN ORDER TO AVOID OVERFLOWS.

4. THE EXISTING EXPANSION JOINTS ARE LEAKING AND HAVE CREATED AN UNPLEASANT ENVIRONMENT INSIDE THE PUMPING STATION AND HAVE BECOME A CONTINUING MAINTENANCE PROBLEM. IT IS THE ENGINEER'S INTENT THAT THE EXPANSION JOINTS BE REPLACED BEFORE OTHER WORK IS BEGUN. THE CONTRACTOR SHALL DEVELOP A WORK SCHEDULE THAT WILL PRIORITIZE THE EXPANSION JOINT REPLACEMENT. THE WORK SCHEDULE SHALL BE SUBJECT TO REVIEW AND APPROVAL BY THE ENGINEER.

5. UNDER THE TERMS OF A SEPARATE CONTRACT, THE CITY OF TAMPA HAS BEGUN TO CLEAN UP CONTAMINATED SOILS AT THE 131ST AVE. PUMPING STATION SITE. THE CLEAN-UP OPERATION IS LIMITED TO THE NORTHEAST CORNER OF THE SITE AND SHOULD BE WELL OUT OF THE WAY OF THE PROPOSED WORK OF THIS CONTRACT. THE CONTRACTOR AND SUBCONTRACTORS PERFORMING THE WORK OF THIS CONTRACT (131ST AVE. PUMPING STATION IMPROVEMENTS), SHALL BE AWARE OF THE CLEAN-UP OPERATION AND COORDINATE PARKING, DELIVERIES, LAY-DOWN AREAS, ETC. WITH THE ENGINEER TO ALLOW THE WORK OF THE CLEAN-UP OPERATION TO PROCEED.

(LOCATED ON EAST WALL) N.T.S.

NOTES:

1. REMOVE EXISTING 20A CIRCUIT BREAKER. PROVIDE AND INSTALL 30A, 3P, 600V CIRCUIT BREAKER (FHL36030) FOR VALVE OPERATORS. RUN SEPARATE 10 AWG CONDUCTORS TO EACH VALVE OPERATOR CIRCUIT BREAKER DISCONNECT. LABEL CUBICLE AS SHOWN.
2. 480V, 3P CIRCUIT BREAKER MOUNTED IN A COPPER FREE CAST ALUMINUM NEMA 4X ENCLOSURE W/ EPOXY POWDER COATING INSIDE AND OUTSIDE. CONDUITS SHALL ENTER ALL OUTDOOR ENCLOSURES FROM THE BOTTOM. COORDINATE CIRCUIT BREAKER DISCONNECT RATINGS WITH VALVE OPERATORS SUPPLIED.
3. ALL CONDUITS, FITTINGS, AND TERMINAL BOXES INSTALLED OUTDOORS SHALL BE RIGID ALUMINUM COATED WITH 40mil PVC OUTSIDE AND 2mil URETHANE INSIDE, AS MANUFACTURED BY ROBROY.
4. ALL CONDUIT MOUNTED INDOORS SHALL BE RIGID ALUMINUM, AS SPECIFIED.
5. PROVIDE AND INSTALL MOTORIZED VALVE OPERATORS AS SHOWN, SPECIFIED, AND REQUIRED.
6. A FIBERGLASS OR STAINLESS STEEL CHANNEL ERECTOR SYSTEM SHALL BE USED TO HANG ALL CONDUITS, BOXES, ETC. OUTDOORS. ALUMINUM MAY BE USED INDOORS. USE 316 STAINLESS STEEL MOUNTING HARDWARE.
7. RUN A PROPERLY SIZED BONDING CONDUCTOR IN ALL CONDUITS.
8. ALL ITEMS NOT MARKED "PROP." ARE EXISTING

CONSTRUCTION NOTES

GENERAL

G-1. CONTRACTOR SHALL COORDINATE ALL CONSTRUCTION ACTIVITIES WITH DEPARTMENT PERSONNEL AND PUMPING STATION OPERATIONS.

G-2. EXISTING DIMENSIONS AND ELEVATIONS ARE BASED ON THE BEST INFORMATION AVAILABLE. TRUE DIMENSIONS AND ELEVATIONS SHALL BE DETERMINED IN THE FIELD PRIOR TO LAYOUT AND SHOP DRAWING SUBMITTALS.

G-3. ALL SUBMITTALS AND SHOP DRAWINGS SHALL BE ORIGINALS OR HIGH QUALITY COPIES (EASILY READABLE). NO FAXED SHEETS OR POOR QUALITY COPIES WILL BE ACCEPTED FOR SUBMITTAL REVIEW.

G-4. CONTRACTOR SHALL PROVIDE AND INSTALL A STOP LOG AND STEEL SHEET (AS A BULKHEAD) TO BE USED TO DIVERT THE FLOW FROM WET WELL #2 TO WET WELL #1 IN ORDER TO REMOVE THE EXISTING KNIFE GATE VALVE AND 24"X16" REDUCER UNDER THE EXISTING PUMP #2. THE STOP LOG SHALL BE PLACED IN THE STOP LOG GROOVE IN BETWEEN WET WELL #1 AND WET WELL #2. THE STEEL SHEET SHALL BE PLACED OVER THE BAR SCREEN IN THE CHANNEL JUST UPSTREAM FROM WET WELL #2.

G-5. DIVERTING FLOW FROM WET WELL #2 MAY ONLY BE DONE DURING THE LOW FLOW PERIOD OF THE DAY, BETWEEN 2:00AM AND 7:00AM.

G-6. MECHANICAL AND ELECTRICAL EQUIPMENT TO BE LOCKED OUT SHALL BE LOCKED OUT WITH A MULTIPLE-LOCK MASTER LOCK-OUT DEVICE, WHICH SHALL BE INSTALLED BY CITY PERSONNEL AND LOCKED BY BOTH THE CITY PERSONNEL AND THE CONTRACTOR.

G-7. CONTRACTOR SHALL PROVIDE THE PUMP, PIPING AND RELATED EQUIPMENT FOR PUMPING DOWN WET WELL #2 AFTER THE STOP LOG/BULKHEAD ARE INSTALLED. THE CONTRACTOR SHALL FURNISH SUFFICIENT PUMPING EQUIPMENT AND DISCHARGE PIPING TO HANDLE ANY LEAKAGE AROUND THE STOP LOGS THAT MAY OCCUR.

G-8. CONTRACTOR MAY TEMPORARILY REMOVE SKYLIGHTS OVER THE SCREEN ROOM IN ORDER TO INSTALL STOP LOG AND STEEL PLATE BULKHEAD.

G-9. THE CONTRACTOR IS RESPONSIBLE FOR PROVIDING, INSTALLING, LEVELING AND ALIGNING MOTOR AND PUMP. PROCEDURES FOR INSTALLATION, AS OUTLINED IN THE HYDRAULIC INSTITUTE STANDARDS, MOST CURRENT EDITION, SHALL BE ADHERED TO.

G-10. PROPOSED PUMP SHALL BE A 350 HORSEPOWER, 24-INCH, 600 RPM FAIRBANKS MORSE VERTICAL CLOSE-COUPLED ANGLEFLOW PUMP MODEL#C5741. PUMP SHALL BE RATED FOR 28.4 MGD @ 50.8 FEET TDH. SEE SPECIFICATIONS FOR MOTOR INFORMATION.

G-11. PROPOSED KNIFE GATE VALVE SHALL BE A 24" L&M MODEL 24M145C100-BG4-X PERFORMANCE PLUS KNIFE GATE VALVE, AS MADE BY TYCO VALVE AND CONTROLS.

G-12. PUMP-CHECK VALVE SHALL BE A 30" DEZURIK PEF, ECCENTRIC PLUG VALVE AND SHALL BE PROVIDED WITH A REMOTELY OPERATED PNEUMATIC ACTUATOR THAT SHALL BE PROPERLY SIZED FOR THE EXISTING PUMPING STATION COMPRESSED AIR SYSTEM.

G-13. AIR SUPPLY FOR PNEUMATICALLY ACTUATED PUMP-CHECK VALVE SHALL BE FROM EXISTING STATION AIR. ARRANGEMENT OF PIPING AND CONNECTIONS TO EXISTING PIPES SHALL BE MADE BY THE CONTRACTOR UNDER THE DIRECTION OF THE ENGINEER.

G-14. ANCHOR BOLTS SHALL BE AS PER PUMP MANUFACTURER'S RECOMMENDATIONS. ANCHOR BOLTS SHALL BE DOUBLE NUTTED AND FINISHED WITH NON-SHRINK GROUT. ALL BOLTS SHALL EXTEND BEYOND THE FASTENING NUTS BY A MINIMUM OF 1/2-INCH.

G-15. ALL HARDWARE, UNLESS OTHERWISE NOTED, SHALL BE TYPE 316 STAINLESS STEEL.

G-16. 30"X30"X30" TEE AND 30"X24" STEEL REDUCER SHALL BE FABRICATED TO SUIT THE DIMENSIONS OF THE PROPOSED EQUIPMENT AND SHALL BE A36-STEEL WITH A 150 PSI RATING. STEEL FITTINGS SHALL BE MANUFACTURED BY AN AWWA CERTIFIED FABRICATOR.

G-17. ALL CEMENTITIOUS CONCRETE AND GROUT, UNLESS OTHERWISE SPECIFIED, SHALL BE CLASS "B" 4000 PSI COMPRESSIVE STRENGTH AT 28 DAYS.

G-18. EXPOSED CONCRETE CORNERS SHALL HAVE A 3/4" CHAMFER AND RE-ENTRANT CORNERS SHALL HAVE A 3/4" FLAT FILLET UNLESS OTHERWISE NOTED.

G-19. CONCRETE PEDESTAL SHOP DRAWINGS INCLUDING FLANGE SUPPORT DETAILS SHALL BE SUBMITTED FOR APPROVAL.

G-20. ALL STEEL REINFORCING SHALL BE DETAILED ACCORDING TO THE LATEST "ACI MANUAL OF STANDARD PRACTICE FOR DETAILING REINFORCED CONCRETE STRUCTURES". ACTUAL PLACEMENT OF STEEL REINFORCING SHALL BE SHOWN ON SHOP DRAWINGS. ALL LAPS AND SPLICES SHALL BE AT LEAST 32 BAR DIAMETERS OR 24 INCHES.

G-21. CONTRACTOR SHALL TAKE PRECAUTIONARY MEASURES TO MINIMIZE DAMAGE TO REINFORCING STEEL WHEN PENETRATING CONCRETE FLOOR BEAM FOR ELECTRICAL CONDUIT ROUTING. CONTRACTOR SHALL SUBMIT METHOD OF BEAM PENETRATION FOR APPROVAL.

G-22. CONTRACTOR SHALL SUBMIT SHOP DRAWINGS FOR APPROVAL TO THE ENGINEER FOR THE PROPOSED STOP LOG AND BULKHEAD. SHOP DRAWINGS SHALL INCLUDE MATERIAL(S) TO BE USED TO MINIMIZE LEAKAGE BETWEEN STEEL SHEETS AND EXISTING STRUCTURES.

G-23. CONTRACTOR SHALL SUBMIT SHOP DRAWINGS FOR APPROVAL TO THE ENGINEER FOR THE TRANSFORMER MOUNTING PLATFORM.

DEMOLITION NOTES

D-1. ALL DIMENSIONS ARE APPROXIMATE. TRUE DIMENSIONS SHALL BE DETERMINED IN THE FIELD.

D-2. SALVAGEABLE MATERIAL AS DETERMINED BY DEPARTMENT PERSONNEL SHALL BE DELIVERED TO THE CITY OF TAMPA'S HOWARD F. CURREN AWTP AT 2700 MARITIME BOULEVARD. NON-SALVAGEABLE MATERIALS ARE TO BE REMOVED FROM THE SITE AND PROPERLY DISPOSED OF AT THE CONTRACTOR'S EXPENSE. IN GENERAL, ALL PUMP AND CONTROLS EQUIPMENT SHALL REMAIN PROPERTY OF THE CITY AND SHALL BE DELIVERED TO THE TREATMENT PLANT.

D-3. THE PUMP STATION SITE SHALL BE MAINTAINED IN AS NEAT AND ORDERLY CONDITION AS POSSIBLE DURING CONSTRUCTION OPERATIONS. WALKWAYS AND DRIVEWAYS SHALL BE KEPT CLEAR FOR DEPARTMENT PERSONNEL TO PASS THROUGH.

D-4. CONTRACTOR SHALL CUT ALL EXPOSED REINFORCING STEEL TO A DEPTH OF 1-INCH BELOW THE EXPOSED SURFACE AND GROUT OVER.

D-5. CONTRACTOR SHALL SUBMIT A PLAN FOR APPROVAL THAT WILL PREVENT THE EXPANSION JOINTS IN THE 30"-36" DISCHARGE HEADER FROM EXPANDING AFTER THE EXISTING 30"x30"x30' TEE HAS BEEN REMOVED IN THE PUMP ROOM.

"POSSIBLE" SEQUENCE OF OPERATIONS

S-1. CLOSE EXISTING 16" KNIFE GATE VALVE UNDER PUMP #2 AND TWO 30" PLUG VALVES IN DISCHARGE PIPING HEADER; REMOVE PUMP, MOTOR, PIPE AND FITTINGS (INCLUDING 30"x30"x30" TEE). ALSO, REMOVE EXISTING ELECTRICAL EQUIPMENT, CONDUIT AND WIRING FOR EXISTING PUMP #2.

S-2. RELOCATE STOP LOG AND STEEL PLATE BULKHEAD TO WET WELL #2 CHAMBERS, PUMP OUT WET WELL #2, REMOVE EXISTING 16" KNIFE GATE VALVE AND 24" X 16" SPOOL PIECE, INSTALL NEW 24" SPOOL PIECE AND 24" KNIFE GATE VALVE. ALSO, BEGIN INSTALLING ELECTRICAL EQUIPMENT, CONDUIT, AND WIRING FOR PROPOSED PUMPING EQUIPMENT.

S-3. INSTALL PROPOSED PUMP #2, MOTOR, PUMP CHECK VALVE, PIPE AND FITTINGS (INCLUDING 30"x30"x30" TEE).

S-4. POUR CONCRETE PEDESTALS FOR PROPOSED PUMP AND PIPING. ALSO, TIE-IN ELECTRICAL EQUIPMENT AND CONTROLS.

S-5. PERFORM REQUIRED TESTS ON PROPOSED PUMPING EQUIPMENT.

S-6. PERFORM TRAINING, COMPLETE PUNCHLIST ITEMS.

B069-157

NOTES

GENERAL

G-1. CONTRACTOR SHALL COORDINATE ALL CONSTRUCTION ACTIVITIES WITH DEPARTMENT PERSONNEL AND PUMPING STATION OPERATIONS.

G-2. EXISTING DIMENSIONS AND ELEVATIONS ARE BASED ON THE BEST INFORMATION AVAILABLE. TRUE DIMENSIONS AND ELEVATIONS SHALL BE DETERMINED IN THE FIELD PRIOR TO LAYOUT AND SHOP DRAWING SUBMITTALS.

G-3. ALL SUBMITTALS AND SHOP DRAWINGS SHALL BE ORIGINALS OR HIGH QUALITY COPIES (EASILY READABLE). NO FAXED SHEETS OR POOR QUALITY COPIES WILL BE ACCEPTED FOR SUBMITTAL REVIEW.

G-4. REPLACEMENT OF EXPANSION JOINT AT ELEV. 30.00 SHALL OCCUR BEFORE ANY WORK ASSOCIATED WITH PUMP #3 REPLACEMENT.

G-5. PRIOR TO PUMP #3 DEMOLITION, CITY FORCES WILL CLOSE THE 42" SLUICE GATE IN THE WET WELL AND THE NECESSARY PLUG VALVES INSIDE THE PUMPING STATION TO ISOLATE PUMP #3. THE CITY REQUIRES A MIN. 1 WEEK ADVANCE NOTICE FOR THIS WORK.

G-6. MECHANICAL AND ELECTRICAL EQUIPMENT TO BE LOCKED OUT SHALL BE LOCKED OUT WITH A MULTIPLE-LOCK MASTER LOCK-OUT DEVICE, WHICH SHALL BE INSTALLED BY CITY PERSONNEL AND LOCKED BY BOTH THE CITY PERSONNEL AND THE CONTRACTOR.

G-7. THE CONTRACTOR IS RESPONSIBLE FOR PROVIDING, INSTALLING, LEVELING AND ALIGNING MOTOR AND PUMP. PROCEDURES FOR INSTALLATION, AS OUTLINED IN THE HYDRAULIC INSTITUTE STANDARDS, MOST CURRENT EDITION, SHALL BE ADHERED TO. SEE SPECIFIC PROVISION SP-80. IF CONFLICT BETWEEN THE SPECS AND THE H.I.S. PROCEDURE ARISE, THE MOST STRINGENT STANDARD SHALL BE FOLLOWED.

G-8. PROPOSED PUMP SHALL BE A 350 HORSEPOWER, 24-INCH, 600 RPM FAIRBANKS MORSE VERTICAL CLOSE-COUPLED ANGLEFLOW PUMP MODEL#C5741. PUMP SHALL BE RATED FOR 29.1 MGD @ 51.1 FEET TDH. SEE SPECIFICATIONS FOR MOTOR INFORMATION.

G-9. PROPOSED KNIFE GATE VALVE SHALL BE A 24" L&M MODEL 24M145C100-BG4-X PERFORMANCE PLUS KNIFE GATE VALVE, AS MADE BY TYCO VALVE AND CONTROLS.

G-10. PUMP-CHECK VALVE SHALL BE A 30" DEZURIK PEF, ECCENTRIC PLUG VALVE AND SHALL BE PROVIDED WITH A REMOTELY OPERATED PNEUMATIC ACTUATOR THAT SHALL BE PROPERLY SIZED FOR THE EXISTING PUMPING STATION COMPRESSED AIR SYSTEM.

G-11. AIR SUPPLY FOR PNEUMATICALLY ACTUATED PUMP-CHECK VALVE SHALL BE FROM EXISTING STATION AIR. ARRANGEMENT OF PIPING AND CONNECTIONS TO EXISTING PIPES SHALL BE MADE BY THE CONTRACTOR UNDER THE DIRECTION OF THE ENGINEER.

G-12. ANCHOR BOLTS SHALL BE AS PER PUMP MANUFACTURER'S RECOMMENDATIONS. ANCHOR BOLTS SHALL BE DOUBLE-NUTTED AND FINISHED WITH NON-SHRINK GROUT. ALL BOLTS SHALL EXTEND BEYOND THE FASTENING NUTS BY A MINIMUM OF 1/2-INCH.

G-13. ALL HARDWARE, UNLESS OTHERWISE NOTED, SHALL BE TYPE 316 STAINLESS STEEL.

G-14. 36"X30"X30" REDUCING TEE SHALL BE FABRICATED TO SUIT THE DIMENSIONS OF THE PROPOSED EQUIPMENT AND SHALL BE A36-STEEL WITH A 150 PSI RATING. STEEL FITTINGS SHALL BE MANUFACTURED BY AN AWWA CERTIFIED FABRICATOR.

G-15. ALL CEMENTITIOUS CONCRETE AND GROUT, UNLESS OTHERWISE SPECIFIED, SHALL BE CLASS "B" 4000 PSI COMPRESSIVE STRENGTH AT 28 DAYS.

G-16. EXPOSED CONCRETE CORNERS SHALL HAVE A 3/4" CHAMFER AND RE-ENTRANT CORNERS SHALL HAVE A 3/4" FLAT FILLET UNLESS OTHERWISE NOTED.

G-17. CONCRETE PEDESTAL SHOP DRAWINGS INCLUDING FLANGE SUPPORT DETAILS SHALL BE SUBMITTED FOR APPROVAL.

G-18. ALL STEEL REINFORCING SHALL BE DETAILED ACCORDING TO THE LATEST "ACI MANUAL OF STANDARD PRACTICE FOR DETAILING REINFORCED CONCRETE STRUCTURES". ACTUAL PLACEMENT OF STEEL REINFORCING SHALL BE SHOWN ON SHOP DRAWINGS. ALL LAPS AND SPLICES SHALL BE AT LEAST 32 BAR DIAMETERS OR 24 INCHES.

G-19. CERTAIN PORTIONS OF THIS PROJECT MAY REQUIRE NIGHT TIME WORK.

G-20. ALL NOTES PERTAINING TO PROPOSED WORK INSIDE SCREEN ROOM ARE LOCATED ON PERTINENT SHEETS.

DEMOLITION NOTES

D-1. ALL DIMENSIONS ARE APPROXIMATE. TRUE DIMENSIONS SHALL BE DETERMINED IN THE FIELD.

D-2. SALVAGEABLE MATERIAL AS DETERMINED BY DEPARTMENT PERSONNEL SHALL BE DELIVERED TO THE CITY OF TAMPA'S HOWARD F. CURREN AWTP AT 2700 MARITIME BOULEVARD. NON-SALVAGEABLE MATERIALS ARE TO BE REMOVED FROM THE SITE AND PROPERLY DISPOSED OF AT THE CONTRACTOR'S EXPENSE. IN GENERAL, ALL PUMP AND CONTROLS EQUIPMENT SHALL REMAIN PROPERTY OF THE CITY AND SHALL BE DELIVERED TO THE TREATMENT PLANT.

D-3. ALL ALUMINUM FRAMES AND PLATFORMS ON PUMP No. 3 SHALL BE SALVAGED AND DELIVERED TO THE TREATMENT PLANT.

D-4. THE PUMP STATION SITE SHALL BE MAINTAINED IN AS NEAT AND ORDERLY CONDITION AS POSSIBLE DURING CONSTRUCTION OPERATIONS. WALKWAYS AND DRIVEWAYS SHALL BE KEPT CLEAR FOR DEPARTMENT PERSONNEL TO PASS THROUGH.

D-5. CONTRACTOR SHALL CUT ALL EXPOSED REINFORCING STEEL TO A DEPTH OF 1-INCH BELOW THE EXPOSED SURFACE AND GROUT OVER.

D-6. CONTRACTOR SHALL SUBMIT A PLAN FOR APPROVAL THAT WILL PREVENT THE EXPANSION JOINTS IN THE 30"-36" DISCHARGE HEADER FROM EXPANDING AFTER THE EXISTING 30"x30"x30' TEE HAS BEEN REMOVED IN THE PUMP ROOM.

"POSSIBLE" CONSTRUCTION SEQUENCE *

S-1. CITY FORCES EXERCISE VALVES TO ISOLATE 24" TIED EXPANSION JOINT AT EL. 30.00

S-2. REPLACE 24" TIED EXPANSION JOINT.

S-3. CITY FORCES CLOSE 42" SLUICE GATE IN WET WELL AND EXERCISE VALVES INSIDE PUMPING STATION TO ISOLATE PUMP #3.

S-4. PROCEED WITH DEMOLITION AND INSTALL 24" KNIFE GATE VALVE AS SOON AS POSSIBLE.

S-5. INSTALL PROPOSED PUMP #3, PUMP CHECK VALVE, PIPE AND FITTING (INCLUDING ELECTRICAL WORK).

S-6. PERFORM REQUIRED TESTS ON PROPOSED PUMPING EQUIPMENT.

S-7. PERFORM TRAINING, COMPLETE PUNCHLIST ITEMS.

* DOES NOT INCLUDE WORK IN SCREEN ROOM.

VENTILATION NOTES:

1. *ALL DUCT DIMENSIONS ARE INSIDE DIMENSIONS AND ARE IN INCHES UNLESS OTHERWISE NOTED.*
2. *ALL DUCT SYSTEMS SHALL BE FIBERGLASS REINFORCED PLASTIC (FRP) OR 316 STAINLESS STEEL. EXISTING DUCTS ARE RECTANGULAR AND THE INTENT IS TO REPLACE THE EXISTING DUCTS WITH THE SAME SIZE DUCTS AND CONFIGURATIONS. IF RECTANGULAR DUCTS ARE NOT AVAILABLE, THE CONTRACTOR MAY SUBMIT FOR APPROVAL DRAWINGS FOR CIRCULAR DUCTS THAT WILL ACHIEVE THE DESIRED FLOW RATES. ANY ADDITIONAL WORK OR MATERIALS REQUIRED TO INSTALL CIRCULAR DUCTS SHALL BE IN KIND WITH NO ADDITIONAL COST TO THE CITY.*
3. *CONTRACTOR SHALL FURNISH AND INSTALL DUCT SUPPORTS MADE OF EITHER 316 STAINLESS STEEL OR FRP DUCT SYSTEM SUPPORTS WITH 316 STAINLESS STEEL HARDWARE. SUPPORTS SHALL BE SPACED AS RECOMMENDED BY DUCT SYSTEM MANUFACTURER, HOWEVER, SPACING SHALL NOT EXCEED THE SUPPORT SPACING OF THE EXISTING DUCT SYSTEM.*
4. *CONTRACTOR SHALL SUBMIT DUCT SYSTEMS LAYOUT DRAWINGS TO THE ENGINEER FOR APPROVAL. THE LAYOUT DRAWING SHALL DEPICT THE DUCTS, DUCT SUPPORT LOCATIONS, REGISTERS, VOLUME DAMPERS, PROPOSED HARDWARE AND ALL MATERIALS BEING PROPOSED.*
5. *AIR FLOW RATES INDICATED REPRESENT THE LOW SPEED OPERATION (900 RPM).*

1. CONTRACTOR SHALL PROVIDE ACCESS TO CITY'S PERSONNEL FOR CLEANING OF BAR SCREENS DURING ALL PHASES OF THE PROJECT.

2. CONTRACTOR IS RESPONSIBLE FOR PROVIDING A SAFE, WELL-VENTILATED WORK ENVIRONMENT. O.S.H.A. STANDARD SAFETY EQUIPMENT (SAFETY HARNESSES, GAS MONITORS, LOWER EXPLOSIVE LIMIT DETECTORS, ETC.) SHALL BE UTILIZED WHERE NEEDED. CONTRACTOR MAY USE EXISTING SUPPLY FANS FOR AS LONG AS THEY DO NOT CONFLICT WITH THE PROPOSED WORK.

3. EXISTING COATING SHALL BE COMPLETELY REMOVED BEFORE NEW REPAIR MATERIAL AND COATING ARE INSTALLED. PREPARE SURFACE AS INSTRUCTED BY COATING SYSTEM MATERIAL MANUFACTURER.

4. REMOVE ALL LOOSE AND DETERIORATED CONCRETE TO STRUCTURALLY SOUND CONCRETE. CERTAIN AREAS MAY REQUIRE MECHANICAL REMOVAL METHODS SUCH AS CHIPPING, BRUSHING, ETC.

5. SAND BLASTING OR WATER JETTING WILL BE ALLOWED PROVIDED THE CONTRACTOR TAKES THE NECESSARY MEASURES TO COVER WET WELL OPENINGS TO PREVENT ANY SAND OR DEBRIS FROM ENTERING THE WET WELL. ALSO, ALL ABOVE GROUND EQUIPMENT MUST COMPLY WITH CITY OF TAMPA ORDINANCES ON NOISE POLLUTION. CONTRACTOR SHALL SUBMIT A DETAILED PLAN TO THE ENGINEER FOR APPROVAL SHOWING THE PROPOSED METHOD OF COVERING THE OPENINGS.

6. EXPOSED REINFORCING STEEL SHALL BE CLEANED AND PREPARED THOROUGHLY BY BLAST CLEANING AND COATED WITH A CORROSION INHIBITOR (SIKA ARMATIC 110 EPOCHEM OR APPROVED EQUAL)

7. FILL VOIDS OF DETERIORATED CONCRETE SECTIONS WITH REPAIR MATERIAL (SIKATOP 123 PLUS, SIKAREPAIR 224 OR APPROVED EQUAL) IN ACCORDANCE WITH THE SPECIFICATIONS AND MANUFACTURER'S INSTRUCTIONS. IT IS NOT THE ENGINEER'S INTENT TO RESTORE THE ORIGINAL SURFACE PROFILE OF THE WALL OR CEILING. PROVIDE A MINIMUM OF 1" COVER OVER RESTORED RE-BAR.

8. PROPOSED 125 MIL COATING PER SPECIFICATIONS AND MANUFACTURER'S INSTRUCTIONS. CONTRACTOR SHALL SUBMIT PROPOSED COATING FOR APPROVAL.

EXISTING SCREEN ROOM PLAN VIEW – EL 2.50

SCALE 1/8" = 1'

NOTES:

1. THE SCREEN ROOM AREA IS CLASSIFIED CLASS I, DIVISION 1, GROUP D AREA (HAZARDOUS LOCATION); THEREFORE, NEC CH. 5 APPLIES. REMOVE FROM THE WET WELL AREA ALL ELECTRICAL EQUIPMENT AS SHOWN, SPECIFIED, AND REQUIRED. THIS INCLUDES, BUT IS NOT LIMITED TO: LIGHTING SYSTEMS, POWER RECEPTACLES, CONVENIENCE RECEPTACLES, INTERCOM, SWITCHES, PILOT LIGHTS, AND ALL ASSOCIATED CONDUITS AND SUPPORT SYSTEMS. PATCH/SEAL PENETRATIONS AND DAMAGED CONCRETE WITH APPROVED PRODUCTS AND FINISH TO MATCH SURROUNDING SURFACE.

2. THE EXISTING COMBUSTIBLE GAS DETECTOR, TRANSMITTER AND ASSOCIATED EQUIPMENT AND CONDUIT SHALL BE REUSED.

3. THE EXISTING HIGH LEVEL ALARM FLOATS AND ASSOCIATED EQUIPMENT SHALL BE REUSED.

4. THE EXISTING SCREEN ROOM LIGHTING CONDUIT IN THE STAIRWELL AREA SHALL REMAIN. REMOVE EXISTING LIGHT SWITCH IN THE STAIRWELL AREA.

PROPOSED SCREEN ROOM PLAN VIEW – EL 2.50

SCALE 1/8" = 1'

NOTES:

1. CLASS I DIVISION I, GROUP D, FLUORESCENT FIXTURE W/ (2)–800mA HIGH OUTPUT 4 FT. LAMPS AND LOW TEMPERATURE BALLAST. FIXTURE SHALL BE CONSTRUCTED OF COPPER FREE ALUMINUM ALLOY AND STAINLESS STEEL HARDWARE. 120VAC OPERATION W/ T6 TEMPERATURE CODE. USE 316 STAINLESS STEEL HANGING HARDWARE BASIS OF DESIGN --R-A-L XP800-4-2L-A.

2. PROVIDE: (1) WEATHER-PROOF SNAP SWITCH FOR WET WELL LIGHTS W/ EXTRA POLE FOR VENTILATION CONTROL, (1) NEMA 4X LEL ALARM LIGHT, AND (1) NEMA 4X MOMENTARY PUSHBUTTON FOR LEL ALARM TEST.

3. ALL CONDUITS, FITTINGS, AND TERMINAL BOXES INSTALLED SHALL BE RIGID ALUMINUM COATED WITH 40mil PVC OUTSIDE AND 2mil URETHANE INSIDE, AS MANUFACTURED BY ROBROY. ALL MATERIALS AND INSTALLATION METHODS IN THE WET WELL AREA MUST BE CONSISTENT W/ NEC CH. 5 STANDARDS FOR A CLASS I, DIVISION I, GROUP D AREA.

4. THE CONTRACTOR SHALL TRACE-OUT EXISTING WIRING AND VERIFY PROPER CONNECTIONS TO THE END DEVICES. EXISTING CONDUCTORS IN THE WET WELL SHALL BE REPLACED, UNLESS NOTED OTHERWISE. ALL SPLICES SHALL BE MADE AS SPECIFIED, IN PROPOSED JUNCTION BOXES LOCATED AS CLOSE TO THE EXISTING CONDUIT SEALS AS PRACTICABLE. IF HOME RUN CONDUCTORS ON THE NON-CLASSIFIED SIDE OF THE CONDUIT SEALS ARE FOUND TO BE DETERIORATED, THEY SHALL BE REMOVED, AND NEW CONDUCTORS SHALL BE INSTALLED AFTER RECEIVING WRITTEN APPROVAL FOR EXTRA WORK FROM THE ENGINEER. REPLACE ALL DISTURBED CONDUIT SEALS.

5. PROVIDE AND INSTALL NEW CONDUIT, SUPPORTS, AND SEALS FOR EXISTING HIGH WATER FLOAT SWITCHES. IF CONDUCTORS ARE FOUND TO BE DETERIORATED, THEY SHALL BE REMOVED, AND NEW CONDUCTORS SHALL BE INSTALLED. CONTRACTOR SHALL FIELD VERIFY EXACT LOCATION OF FLOAT SWITCHES.

6. CORE DRILL CONCRETE AS REQUIRED TO INSTALL CONDUITS. FILL ANNULAR SPACE USING APPROVED PRODUCTS AND FINISH TO MATCH EXISTING SURFACE.

7. TOUCH-UP ANY DAMAGED PVC COATING USING MANUFACTURER RECOMMENDED PRODUCTS. MATCH EXISTING SURFACE.

8. THE EXISTING SCREEN ROOM LIGHTING CONDUIT SUPPORTS IN THE STAIRWELL AREA SHALL BE REMOVED AND REPLACED WITH STAINLESS STEEL ONE-HOLE STRAPS.

9. INSTALL NEW BLOWER CONTROL CONDUIT AND CONDUCTORS IN THE STAIRWELL AREA AS SHOWN, SPECIFIED, AND REQUIRED. USE STAINLESS STEEL ONE-HOLE STRAPS TO SUPPORT CONDUIT.

10. THE EXISTING COMBUSTIBLE GAS DETECTOR CONDUIT SUPPORTS SHALL BE REMOVED AND REPLACED WITH STAINLESS STEEL ONE-HOLE STRAPS.

PROJECT RECORD

NOTES:

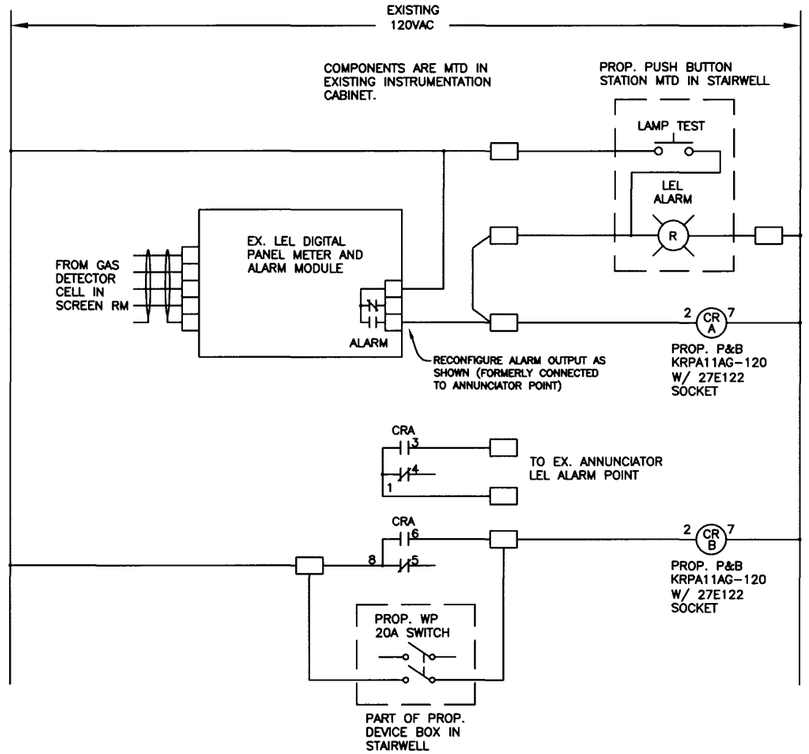
1. THE WET WELL LIGHT SWITCH SHALL CONNECT TO THE EXISTING SUPPLY FAN (S–1, S–2) CONTROLS LOCATED IN THE CONTROL CENTER. FAN OPERATION IS DEPENDENT ON THE EXISTING H/O/A AND SPEED SWITCHES AS FOLLOWS:

AUTO– FAN OPERATES ON LOW SPEED UNTIL THE SCREEN ROOM LIGHTS ARE TURNED ON OR 25% LEL ALARM IS REACHED. SUPPLY FAN WILL THEN RUN AT HIGH SPEED UNTIL LIGHTS ARE TURNED OFF.

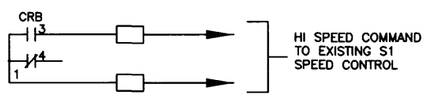
MAN.– FAN OPERATES CONTINUOUSLY ON HIGH SPEED AS SELECTED ON MCC.

OFF – FAN IS TURNED OFF.

2. RUN A PROPERLY SIZED BONDING CONDUCTOR IN ALL CONDUITS.



SUPPLY FAN S1



SUPPLY FAN S2

GENERAL NOTES

1. CONTRACTOR SHALL COORDINATE ALL CONSTRUCTION ACTIVITIES WITH THE WASTEWATER INSPECTOR, WASTEWATER PERSONNEL AND PUMP STATION OPERATOR.
2. NORMAL WORKING HOURS SHALL BE WEEKDAYS 7:30AM TO 4:00PM UNLESS OTHERWISE APPROVED BY THE ENGINEER.
3. CONTRACTOR SHALL VERIFY QUANTITIES OF ALL NECESSARY SUPPORTS, GRATING, RAILING, LADDERS AND HARDWARE.
4. DIMENSIONS SHOWN ARE NOT NECESSARILY ACCURATE TO THE DEGREE REQUIRED FOR FABRICATION. EXISTING DIMENSIONS AND VIEWS ARE SHOWN BASED ON THE BEST INFORMATION AVAILABLE. CONTRACTOR SHALL FIELD VERIFY ALL PERTINENT DIMENSIONS AND REFLECT THEM ON DETAILED SHOP DRAWINGS FOR APPROVAL BEFORE ANY FABRICATION.
5. SHOP DRAWINGS SHALL BE SUBMITTED AND APPROVED BY THE CITY FOR ALL PROPOSED ITEMS. ALL SUBMITTALS AND SHOP DRAWINGS SHALL BE ORIGINALS OR HIGH QUALITY COPIES (CLEARLY LEGIBLE). NO FAXED SHEETS OR POOR QUALITY COPIES WILL BE ACCEPTED FOR SUBMITTAL REVIEW.
6. DURING CONSTRUCTION, CONTRACTOR SHALL MAINTAIN A CLEAR PATH TO EXISTING PUMPING STATION EQUIPMENT FOR CITY STAFF TO ACCESS AND MAINTAIN THE EXISTING PUMPING STATION.
7. OSHA STANDARD SAFETY EQUIPMENT SUCH AS SAFETY HARNESS,ESS, GAS MONITORS, LOWER EXPLOSIVE LIMIT (LEL) DETECTORS, BREATHING APPARATUS, ETC. SHALL BE UTILIZED WHERE THE WORK DICTATES THEIR USE.
8. ALL COMPONENTS OF THE PLATFORM (EXCEPT CONNECTING HARDWARE) SHALL BE FIBERGLASS. THE FIBERGLASS SHALL BE CAPABLE OF WITHSTANDING UV RAYS, CAUSTIC SODA, SODIUM HYPOCHLORITE, HYDROGEN SULFIDE AND CHLORINE. AT MINIMUM THE COMPONENTS SHALL BE EXTREN 625 VINYL ESTER OR APPROVED EQUAL.
9. GRATING SHALL BE PULTRUDED FIBERGLASS AND CAPABLE OF WITHSTANDING UV RAYS, CAUSTIC SODA, SODIUM HYPOCHLORITE, HYDROGEN SULFIDE AND CHLORINE. GRATING SHALL HAVE A NON-SLIP SURFACE AND SECURED USING STAINLESS STEEL CLIPS.
10. PLATFORM SHALL MEET OSHA STANDARDS AND ANY PERTINENT BUILDING CODES.
11. ALL HARDWARE SHALL BE 316 STAINLESS STEEL.
12. ALL CONNECTIONS SHALL BE FIXED AND RIGID.
13. PLATFORM SHALL BE DESIGNED TO CARRY A MINIMUM OF 40 PSF UNIFORM LOAD AND A 300 LB CONCENTRATED LOAD WITH APPROPRIATE SAFETY FACTORS AND HAVE A MAXIMUM DEFLECTION OF 1/4".
14. PLATFORM SHALL BE DESIGNED TO CARRY A MINIMUM 1000 LB LATERAL LOAD AT THE TOP OF THE PLATFORM
15. VERTICAL SUPPORT MEMBERS SHALL BE PLACED IN A MANNER THAT MINIMIZES INTERFERENCES WITH MAINTENANCE ACTIVITY AND WITHIN THE WASHDOWN TROUGH AREA, AS DETERMINED BY THE ENGINEER.
16. PLATFORM SHALL ALLOW EASY ACCESS TO BOTH UPPER AND LOWER ACCESS PORTS AS DEPICTED ON PLANS.
17. PLATFORM SHALL HAVE TWO (2) LADDERS AS DEPICTED ON PLANS.
18. PLATFORM GRATING SHALL BE 14'-6" ABOVE WASHDOWN AREA GRADE.

NOTES

GENERAL NOTES

G-1. CONTRACTOR SHALL COORDINATE ALL CONSTRUCTION ACTIVITIES WITH DEPARTMENT PERSONNEL AND PUMPING STATION OPERATIONS.

G-2. EXISTING DIMENSIONS AND ELEVATIONS ARE BASED ON THE BEST INFORMATION AVAILABLE. TRUE DIMENSIONS AND ELEVATIONS SHALL BE DETERMINED IN THE FIELD PRIOR TO LAYOUT AND SHOP DRAWING SUBMITTALS.

G-3. ALL SUBMITTALS AND SHOP DRAWINGS SHALL BE ORIGINALS OR HIGH QUALITY COPIES (EASILY READABLE). NO FAXED SHEETS OR POOR QUALITY COPIES WILL BE ACCEPTED FOR SUBMITTAL REVIEW.

G-4. PRIOR TO PUMP #1 DEMOLITION, CITY FORCES WILL CLOSE THE NECESSARY PLUG VALVES INSIDE THE PUMPING STATION TO ISOLATE THE DISCHARGE SIDE OF PUMP #1. THE CITY REQUIRES A MIN. 1 WEEK ADVANCE NOTICE FOR THIS WORK.

G-5. CONTRACTOR SHALL INSTALL TWO STOP LOGS AND A 42" INFLATABLE PLUG IN WET WELL IN ORDER TO ISOLATE SUCTION SIDE OF PUMP #1. SEE WET WELL DETAILS ON SHEET 10.

G-6. MECHANICAL AND ELECTRICAL EQUIPMENT TO BE LOCKED OUT SHALL BE LOCKED OUT WITH A MULTIPLE-LOCK MASTER LOCK-OUT DEVICE, WHICH SHALL BE INSTALLED BY CITY PERSONNEL AND LOCKED BY BOTH THE CITY PERSONNEL AND THE CONTRACTOR.

G-7. THE CONTRACTOR IS RESPONSIBLE FOR PROVIDING, INSTALLING, LEVELING AND ALIGNING MOTOR AND PUMP. PROCEDURES FOR INSTALLATION, AS OUTLINED IN THE HYDRAULIC INSTITUTE STANDARDS, MOST CURRENT EDITION, SHALL BE ADHERED TO. SEE SPECIFIC PROVISION SP-80. IF CONFLICT BETWEEN THE SPECS AND THE H.I.S. PROCEDURE ARISE, THE MOST STRINGENT STANDARD SHALL BE FOLLOWED.

G-8. PROPOSED PUMP SHALL BE A 400 HORSEPOWER, 24-INCH, 600 RPM FAIRBANKS MORSE VERTICAL CLOSE-COUPLED ANGLEFLOW PUMP MODEL #C5741. PUMP SHALL BE RATED FOR 29.3 MGD @ 62.0 FEET TDH. SEE SPECIFICATIONS FOR MOTOR INFORMATION.

G-9. PROPOSED KNIFE GATE VALVE SHALL BE A MODEL 145, "PERFORMANCE PLUS" KNIFE GATE, AS MADE BY TYCO VALVE AND CONTROLS; SEE SPECIFICATIONS FOR DETAILS. KNIFE GATE VALVE SHALL BE EQUIPPED WITH ELECTRIC POWERED ACTUATOR, AS MADE BY ROTORK, LIMITORQUE, OR EQUAL; SEE SPECIFICATIONS FOR DETAILS.

G-10. EXISTING 30" PUMP CHECK VALVE AND PNEUMATIC ACTUATOR SHALL BE REMOVED AND PLACED IN SAFE STORAGE DURING DEMOLITION ACTIVITIES. PUMP CHECK VALVE ASSEMBLY SHALL BE RE-INSTALLED IN NEW LOCATION WITH PROPOSED PUMP #1, PIPE AND FITTINGS. CONTRACTOR SHALL BE RESPONSIBLE FOR RE-CONNECTING PUMP CHECK VALVE ACTUATOR TO PNEUMATIC AIR SUPPLY, POWER AND CONTROLS SOURCES. SEE ELECTRICAL SHEETS FOR DETAILS.

G-11. AIR SUPPLY FOR PNEUMATICALLY ACTUATED PUMP-CHECK VALVE SHALL BE FROM EXISTING STATION AIR. ARRANGEMENT OF PIPING AND CONNECTIONS TO EXISTING PIPES SHALL BE MADE BY THE CONTRACTOR UNDER THE DIRECTION OF THE ENGINEER.

G-12. ANCHOR BOLTS SHALL BE AS PER PUMP MANUFACTURER'S RECOMMENDATIONS. ANCHOR BOLTS SHALL BE DOUBLE-NUTTED AND FINISHED WITH NON-SHRINK GROUT. ALL BOLTS SHALL EXTEND BEYOND THE FASTENING NUTS BY A MINIMUM OF 1/2-INCH.

G-13. ALL HARDWARE, UNLESS OTHERWISE NOTED, SHALL BE TYPE 316 STAINLESS STEEL.

G-14. PROP. 30"x 30"x 24" REDUCING TEE SHALL BE FABRICATED TO SUIT THE DIMENSIONS OF THE PROPOSED EQUIPMENT AND SHALL BE A36-STEEL WITH A 150 PSI RATING. STEEL FITTINGS SHALL BE MANUFACTURED BY AN AWWA CERTIFIED FABRICATOR.

G-15. ALL CEMENTITIOUS CONCRETE AND GROUT, UNLESS OTHERWISE SPECIFIED, SHALL BE CLASS "B" 4000 PSI COMPRESSIVE STRENGTH AT 28 DAYS.

G-16. EXPOSED CONCRETE CORNERS SHALL HAVE A 3/4" CHAMFER AND RE-ENTRANT CORNERS SHALL HAVE A 3/4" FLAT FILLET UNLESS OTHERWISE NOTED.

G-17. CONCRETE PEDESTAL SHOP DRAWINGS INCLUDING FLANGE SUPPORT DETAILS SHALL BE SUBMITTED FOR APPROVAL.

G-18. ALL STEEL REINFORCING SHALL BE DETAILED ACCORDING TO THE LATEST "ACI MANUAL OF STANDARD PRACTICE FOR DETAILING REINFORCED CONCRETE STRUCTURES". ACTUAL PLACEMENT OF STEEL REINFORCING SHALL BE SHOWN ON SHOP DRAWINGS. ALL LAPS AND SPLICES SHALL BE AT LEAST 32 BAR DIAMETERS OR 24 INCHES.

G-19. CERTAIN PORTIONS OF THIS PROJECT MAY REQUIRE NIGHT TIME WORK.

G-20. ALL NOTES PERTAINING TO PROPOSED WORK INSIDE SCREEN ROOM ARE LOCATED ON PERTINENT SHEETS.

G-21. PROP. FLOW METER SHALL BE A 24" ABB ELECTROMAGNETIC FLOW METER, WATERMASTER SERIES, AS MADE BY ABB. SEE SPECIFICATIONS FOR DETAILS.

G-22. ALL DUCTILE IRON PIPE AND FITTINGS SHALL BE LINED WITH PROTECTO 401 CERAMIC EPOXY (40 MILS DFT), OR EQUAL. ALL STEEL PIPE AND FITTINGS SHALL BE LINED WITH 40 MILS (DFT) OF "SG-14" GLASS LINING (PORCELAIN ENAMEL), AS MADE BY U.S. PIPE, OR EQUAL.

G-23. THE PUMPING STATION SHALL REMAIN IN OPERATION DURING THE ENTIRE PUMP No.1 REPLACEMENT PROJECT. THE CONTRACTOR SHALL PLAN HIS WORK ACCORDINGLY.

G-24. ALL WORK SHALL BE PERFORMED IN ACCORDANCE WITH THE FLORIDA BUILDING CODE 5th EDITION 2014, AND CHAPTER 5 OF THE CITY OF TAMPA CODE.

G-25. CONTRACTOR SHALL REMOVE EX. WET WELL #1 (42") SLUICE GATE AND ENTIRE ELECTRIC ACTUATOR ASSEMBLY.

G-26. CONFIGURATION FOR THREE PROPOSED KNIFE GATE VALVE ACTUATORS SHALL BE AS INDICATED IN THE PLANS.

G-27. ALL ELECTRICAL WORK SHALL BE PERFORMED IN ACCORDANCE WITH THE FLORIDA BUILDING CODE 5TH EDITION 2014, CHAPTER 5 OF THE CITY OF TAMPA CODE AND THE NATIONAL FIRE PROTECTION ASSOCIATION (NFPA) SERIES 70/NATIONAL ELECTRICAL CODE (NEC) 2011 EDITION.

DEMOLITION NOTES

D-1. ALL DIMENSIONS ARE APPROXIMATE. TRUE DIMENSIONS SHALL BE DETERMINED IN THE FIELD.

D-2. SALVAGEABLE MATERIAL, AS DETERMINED BY DEPARTMENT PERSONNEL, SHALL BE DELIVERED TO THE CITY OF TAMPA'S HOWARD F. CURREN AWTP AT 2700 MARITIME BOULEVARD. NON-SALVAGEABLE MATERIALS ARE TO BE REMOVED FROM THE SITE AND PROPERLY DISPOSED OF AT THE CONTRACTOR'S EXPENSE. IN GENERAL, ALL PUMP AND CONTROLS EQUIPMENT SHALL REMAIN PROPERTY OF THE CITY AND SHALL BE DELIVERED TO THE TREATMENT PLANT.

D-3. ALL ALUMINUM FRAMES AND PLATFORMS ON PUMP #1 SHALL BE SALVAGED AND DELIVERED TO THE TREATMENT PLANT.

D-4. THE PUMP STATION SITE SHALL BE MAINTAINED IN AS NEAT AND ORDERLY CONDITION AS POSSIBLE DURING CONSTRUCTION OPERATIONS. WALKWAYS AND DRIVEWAYS SHALL BE KEPT CLEAR FOR DEPARTMENT PERSONNEL TO PASS THROUGH.

D-5. CONTRACTOR SHALL CUT ALL EXPOSED REINFORCING STEEL TO A DEPTH OF 1-INCH BELOW THE EXPOSED SURFACE AND GROUT OVER.

D-6. CONTRACTOR SHALL SUBMIT A PLAN FOR APPROVAL THAT WILL PREVENT THE EXPANSION JOINTS IN THE 30"-36" DISCHARGE HEADER FROM EXPANDING AFTER THE EXISTING 30"x 30"x 36' TEE HAS BEEN REMOVED IN THE PUMP ROOM.

"POSSIBLE" CONSTRUCTION SEQUENCE

S-1. CITY FORCES CLOSE EX. 30" & 24" PLUG VALVES IN PUMP ROOM TO ISOLATE DISCHARGE SIDE OF PUMP #1. CONTRACTOR TO INSTALL STOP LOGS AND 42" PLUG IN SCREEN ROOM TO ISOLATE SUCTION SIDE OF PUMP #1.

S-2. PROCEED WITH DEMOLITION AND INSTALL 24" KNIFE GATE VALVE AS SOON AS POSSIBLE.

S-3. INSTALL PROPOSED PUMP #1, PUMP CHECK VALVE, FLOW METER, PIPE AND FITTINGS (INCLUDING ELECTRICAL WORK).

S-4. PERFORM REQUIRED TESTS ON PROPOSED PUMPING EQUIPMENT.

S-5. PERFORM TRAINING, COMPLETE PUNCH LIST ITEMS.

NOTES:

1. CITY WILL FURNISH THE CONTRACTOR WITH TWO STAINLESS STEEL STOP LOGS.
2. CONTRACTOR TO INSTALL STOP LOGS IN THE WET WELL #1 INLET CHANNEL AND IN BETWEEN WET WELLS PRIOR TO REMOVING EXISTING PUMP #1 IN PUMP ROOM AND INSTALLING 24" KNIFE GATE VALVE.
3. AFTER STOP LOGS HAVE BEEN INSTALLED, CONTRACTOR SHALL INSTALL HYDRAULIC SUMP PUMP IN THE ISOLATED WET WELL #1 IN ORDER TO PUMP WET WELL DOWN AND CATCH ANY WASTEWATER BYPASSING THE STOP LOGS.
4. AFTER WET WELL IS PUMPED DOWN, CONTRACTOR SHALL INSTALL, AND MAINTAIN A 42" INFLATABLE PLUG IN THE PUMP #1 INFLUENT PIPE.
5. INFLATABLE PLUG, HYDRAULIC PUMP AND STOP LOGS MAY BE REMOVED AFTER 24" SPOOL PIECE AND KNIFE GATE VALVE ARE SUCCESSFULLY INSTALLED IN THE PUMP ROOM.
6. OSHA STANDARD SAFETY EQUIPMENT SUCH AS SAFETY HARNESSES, GAS MONITORS, LOWER EXPLOSIVE LIMIT (LEL) DETECTORS, ETC. SHALL BE UTILIZED WHERE THE WORK DICTATES THEIR USE, AND SHALL BE SOLE RESPONSIBILITY OF THE CONTRACTOR.

SCALE : 3/16" = 1'-0"

KEYED NOTES:

1. EXISTING PUMP STATION BUILDING.
2. EXISTING SEWAGE PUMPS CONTROL CENTER. REFER ALSO TO ELEVATION ON SHEET E4.
3. EXISTING CUBICLE NO. 3 CONTAINING EXISTING PUMP NO. 1 MOTOR STARTER. EXISTING STARTER TO BE REMOVED. REFER TO SHEETS E4 AND E5 FOR OTHER WORK REQUIRED.
4. EXISTING CUBICLE NO. 4 CONTAINING PUMP NO. 1 AND PUMP NO. 2 CONTROLS. (PUMP NO. 1 CONTROLS ABOVE CUBICLE 4A, PUMP NO. 2 CONTROLS BELOW, CUBICLE 4B). REFER TO SHEET E4 FOR WORK REQUIRED.
5. EXISTING LIQUID LEVEL CONTROL (LLC) PANEL. REFER TO SHEET E4 MODIFICATIONS REQUIRED TO ACCOMMODATE NEW FLOW METER TO BE INSTALLED AT ELEVATION 15.00'. REFER TO SHEET E2 FOR NEW FLOW METER LOCATION.
6. EXISTING MOTOR CONTROL CENTER, AUTOMATIC TRANSFER SWITCH AND ANNUNCIATOR LINEUP. REFER TO SHEETS E2 AND E16 FOR ELEVATION AND WORK REQUIRED.
7. EXISTING 120/208V PANEL. CONTRACTOR TO PROVIDE AND INSTALL THREE (3) NEW, 120V, SINGLE-POLE CIRCUIT BREAKERS. ONE CIRCUIT FOR NEW FLOW METER 120V POWER, ONE CIRCUIT FOR NEW ANNUNCIATOR PLC 120V POWER, ONE FOR SIGNAL ISOLATORS/CONVERTERS 120V POWER. (1)
8. EXISTING PLC CONTROL CABINET. CONTRACTOR TO PROVIDE NEW 3/4" CONDUIT WITH ONE (1) 2/C #16 TWISTED SHIELD CABLE (BELDEN 8719) TO NEW FLOW METER TRANSMITTER TO BE INSTALLED IN LIQUID LEVEL CONTROL PANEL. REFER TO NOTE #9 ON SHEET E2. PROVIDE NEW CONDUIT/CONDUCTORS, C3, C4, C7, C9 AND C10.
9. NEW CONDUIT AND CONDUCTORS TO BE INSTALLED TO NEW PUMP NO. 1 AT ELEVATION 15.00'. REFER TO SHEET E2 FOR CONTINUATION.
10. EXISTING CONDUIT. CONDUIT CURRENTLY CONTAINS ONE MANUFACTURER SUPPLIED FLOW METER TRANSMITTER CABLE. CONTRACTOR TO INSTALL NEW FLOW METER TRANSMITTER CABLE (FROM FLOW METER IN NOTE #8 ON SHEET E2) IN EXISTING CONDUIT.
11. EXISTING SEWAGE PUMP NO. 3 (AT ELEVATION 15.00'). NO WORK REQUIRED.
12. EXISTING SEWAGE PUMP NO. 2 (AT ELEVATION 15.00'). NO WORK REQUIRED.
13. EXISTING SEWAGE PUMP NO. 1 (AT ELEVATION 41.25') TO BE REMOVED AND REPLACED. REFER ALSO TO CIVIL SHEETS AND SHEET E2.
14. PROPOSED LOCATION OF NEW 400 HP VFD FOR PUMP NO. 1 (AT ELEVATION 41.25'). REFER TO SHEET E6 FOR ELEVATION.
15. EXISTING ANNUNCIATOR PANEL TO BE REMOVED. REFER ALSO TO SHEET E16 FOR WORK REQUIRED.
16. EXISTING GENERATOR. NO WORK REQUIRED.
17. PROVIDE AND INSTALL NEW 3/4" CONDUIT WITH 3-#12 + 1-#12 GND DOWN TO ELEVATION 15.00' FOR NEW KNIFE GATE VALVE ACTUATORS. REFER ALSO TO SHEET E2.

(1) NOTE:
REFER ALSO TO SHEET E4 FOR OTHER CONDUIT/CONDUCTORS REQUIRED.

GENERAL NOTES:

1. NOT ALL CONDUITS/CONDUCTORS SHOWN FOR CLARITY. REFER ALSO TO SHEETS E1 AND E3.

KEYED NOTES:

1. EXISTING SEWAGE PUMP NO. 3. NO WORK REQUIRED.
2. EXISTING SEWAGE PUMP NO. 2. NO WORK REQUIRED.
3. NEW SEWAGE PUMP NO. 1 (TO BE INSTALLED AT ELEVATION 15.00') REFER ALSO TO CIVIL SHEETS.
4. EXISTING KNIFE GATE VALVE. REFER ALSO TO CIVIL SHEETS.
5. NEW KNIFE GATE VALVE ACTUATOR. REFER ALSO TO CIVIL SHEETS.
6. PROVIDE AND INSTALL NEW 600V, 30A, 3-POLE MANUAL SWITCH IN NEMA 4 DIE CAST ZINC ALLOY, SQUARE-D 2510KW2CH OR EQUAL. FIELD LOCATE BASED ON ACTUATOR SELECTED. MOUNT WITH 1-5/8" X 1-5/8" STAINLESS STEEL UNISTRUT. PROVIDE 3/4" WATERTIGHT, NON-METALLIC FLEXIBLE CONDUIT CONNECTION TO ACTUATOR WITH 3-#12 + 1-#12 GND.
7. PROVIDE AND INSTALL NEW 6" X 6" X 4" NEMA 4X STAINLESS STEEL JUNCTION BOX AT EL 15.00' FOR ACTUATOR FEEDER CIRCUIT. FIELD LOCATE.
8. NEW 24" ABB METER AND ASSOCIATED FLOW METER ELEMENT.
9. EXISTING 3/4" CONDUIT. CONDUIT CONTINUES UP TO JUNCTION BOX AT ELEVATION 26.50'. AN EXISTING CONDUIT IS INSTALLED FROM THE JUNCTION BOX TO THE LIQUID LEVEL CONTROL PANEL. CONTRACTOR TO PROVIDE AND INSTALL NEW FLOW METER SIGNAL CABLE FROM FLOW METER ELEMENT (NOTE #8) TO THE NEW FLOW METER TRANSMITTER TO BE INSTALLED IN THE EXISTING LIQUID LEVEL CONTROL PANEL. REFER ALSO TO SHEET E1.
10. PROPOSED LOCATION OF NEW 400 HP VFD FOR PUMP NO. 1 (AT ELEVATION 41.25' ABOVE). REFER TO ALSO TO SHEET E1.
11. EXISTING 20" EXHAUST DUCTWORK DIRECTLY BELOW 41.25' SLAB. LOCATION SHOWN IS APPROXIMATE.
12. COORDINATE FLOOR PENETRATIONS AND NEW VFD CONDUIT INSTALLATION WITH VFD MANUFACTURER'S CONDUIT ENTRY WINDOW AND EXISTING 20" EXHAUST DUCTWORK DIRECTLY BELOW 41.25' SLAB.
13. CONTRACTOR SHALL REMOVE EXISTING VIBRATION EQUIPMENT AND PROVIDE AND INSTALL NEW SENSORS AND INSTALL ASSOCIATED CONDUCTORS UP TO ELEVATION 41.25'. REFER TO SHEET E1 FOR NEW CTC EQUIPMENT LOCATION. EXISTING CONDUCTORS CURRENTLY USED FOR VIBRATION EQUIPMENT 120V AC POWER, PUMP AND MOTOR VIBRATION ALARMS, AS WELL AS, FOR PUMP AND MOTOR VIBRATION & TEMPERATURE 4-20mA SIGNALS SHALL BE DISCONNECTED AT THE EXISTING TERMINAL BOX AT ELEVATION 15.00' AND ABANDONED.
14. CONTRACTOR SHALL RELOCATE CTC EQUIPMENT FROM PROPOSED LOCATION ON ELEVATION 15.00' TO ELEVATION 41.25'. REFER TO SHEET E1 FOR PROPOSED CTC EQUIPMENT LOCATION. PROVIDE AND INSTALL NEW SENSORS AND INSTALL ASSOCIATED CONDUCTORS UP TO PROPOSED CTC EQUIPMENT AT ELEVATION 41.25'. CONDUCTORS CURRENTLY USED FOR VIBRATION EQUIPMENT 120V AC POWER, PUMP AND MOTOR VIBRATION ALARMS, AS WELL AS, FOR PUMP AND MOTOR VIBRATION & TEMPERATURE 4-20mA SIGNALS SHALL BE DISCONNECTED AT THE EXISTING TERMINAL BOX AT ELEVATION 15.00' AND ABANDONED. 1

SEWAGE PUMPS CONTROL CENTER FRONT ELEVATION

SCALE : 1/2" = 1'-0"

GENERAL NOTES:

1. ALL DIN-RAIL SHALL BE ALUMINUM.
2. PROVIDE AND INSTALL ALL ASSOCIATED END BARRIERS, TERMINAL JUMPERS AND ACCESSORIES AS REQUIRED FOR TERMINAL BLOCKS.

KEYED NOTES:

(1) EXISTING PLC CONTROL CABINET. REFER TO SHEET E1 FOR CONDUIT AND CONDUCTORS REQUIRED.

(2) EXISTING LIQUID LEVEL CONTROLS (LLC) CUBICLE. REFER TO DETAIL ON SHEET E6 FOR OTHER WORK REQUIRED.

(3) EXISTING ABB FLOW METER TRANSMITTER LOCATED ON BACKPLATE OF LLC (BEHIND LLC DOOR).

(4) PROVIDE AND INSTALL NEW ABB FLOW METER TRANSMITTER. PROVIDE AND INSTALL 2-#12 + 1-#12 GND TO 120/208V PANELBOARD FOR FLOW METER TRANSMITTER 120V POWER (P40). PROVIDE AND INSTALL 2/C #16 TWISTED SHIELDED (BELDEN 8719) FROM NEW FLOW METER TRANSMITTER TO EXISTING PLC. TRANSMITTER CABLE BY MANUFACTURER.

(5) EXISTING SEWAGE PUMP NO. 1 CUBICLE (SECTION 3). REFER TO SHEET E5 FOR WORK REQUIRED.

(6) EXISTING CUBICLE 4A FOR PUMP NO. 1 CONTROLS. CONTRACTOR SHALL REMOVE ALL INTERIOR COMPONENTS MADE OBSOLETE BY THE INSTALLATION OF THE NEW PUMP NO. 1 VFD. REFER TO CONDUIT AND CABLE SCHEDULE ON SHEET E21. REFER ALSO TO SHEETS E8, E9, E10 AND E11 FOR NEW VFD CONTROLS. PROVIDE AND INSTALL NEW 600V, 20A TERMINAL BLOCKS (ALLEN-BRADLEY 1492-W3) FOR NEW CONDUCTORS TO BE INSTALLED FROM VFD. REFER ALSO TO GENERAL NOTES. NOTE: NEW CONTROLS FOR PUMP NO. 1 SHALL BE MOUNTED IN THE PROPOSED FREE-STANDING VFD CABINET LOCATED TO THE EAST.

(7) EXISTING CUBICLE 4B FOR PUMP NO. 2 CONTROLS. REFER TO SHEETS E13, E14 AND E15 FOR REPLACEMENT OF EXISTING CONTROLS.

(8) EXISTING DEVICES TO BE REMOVED AND REPLACED WITH NEW. REFER TO DETAIL ON SHEET E6 FOR WORK REQUIRED.

(9) REMOVE EXISTING DEVICES AND PROVIDE AND INSTALL 1/4" ALUMINUM PLATE OVER EXISTING CUT-OUTS. PAINT TO MATCH EXISTING SURFACE.

(10) EXISTING SECTION 5 CONTAINING EXISTING PUMP NO. 2 VFD.

(11) EXISTING DEVICES TO BE REPLACED. REFER TO SHEETS E13, E14 AND E15 FOR NEW PUSHBUTTONS, PILOT LIGHTS, ETC. REQUIRED.

(12) APPROXIMATE LOCATION FOR EXISTING GAUGE PRESSURE TRANSMITTERS FOR WEST AND EAST WET WELL LEVELS. CONTRACTOR TO FIELD VERIFY LOCATION AND TYPE.

(13) PROVIDE AND INSTALL FOUR (4): 4-20mA SIGNAL ISOLATOR/CONVERTERS. MOORE INDUSTRIES ECT/4-20mA/2X4-20mA/117AC/DIN, OR EQUAL. IF INSTRUMENT REQUIRES LOOP POWER, CONTRACTOR SHALL INSTALL ECT/4-20mA/2X4-20mA/117AC/TX/DIN, OR EQUAL. EACH ISOLATOR/CONVERTER SHALL BE PROVIDED WITH A 120V, 1 AMPERE THERMAL CIRCUIT BREAKER. THERMAL CIRCUIT BREAKERS SHALL BE PHOENIX CONTACT TCP TYPE. PROVIDE WITH SCREW TYPE CONNECTION, FUSE BASE TERMINAL BLOCK, PHOENIX CONTACT TYPE UK 6-FSI/C. ALL COMPONENTS SHALL BE MOUNTED TO LIQUID LEVEL CONTROLS (LLC) CUBICLE BACKPANEL WITH 35mm ALUMINUM DIN-RAIL. PROVIDE NEW TERMINAL BLOCKS AS REQUIRED. LOCATION SHOWN FOR NEW COMPONENTS IS APPROXIMATE. CONTRACTOR SHALL RELOCATE DEVICES, AND/OR RELOCATE EXISTING DEVICES, AS NECESSARY.

(14) REMOVE EXISTING TELEMETRY CABINET, THEN PROVIDE AND INSTALL NEW ACE3600 CABINET. MOUNT CABINET TO WALL WITH 1-5/8" X 1-5/8" STAINLESS STEEL UNISTRUT. REFER TO SHEET E22 FOR ACE3600 CABINET DETAILS.

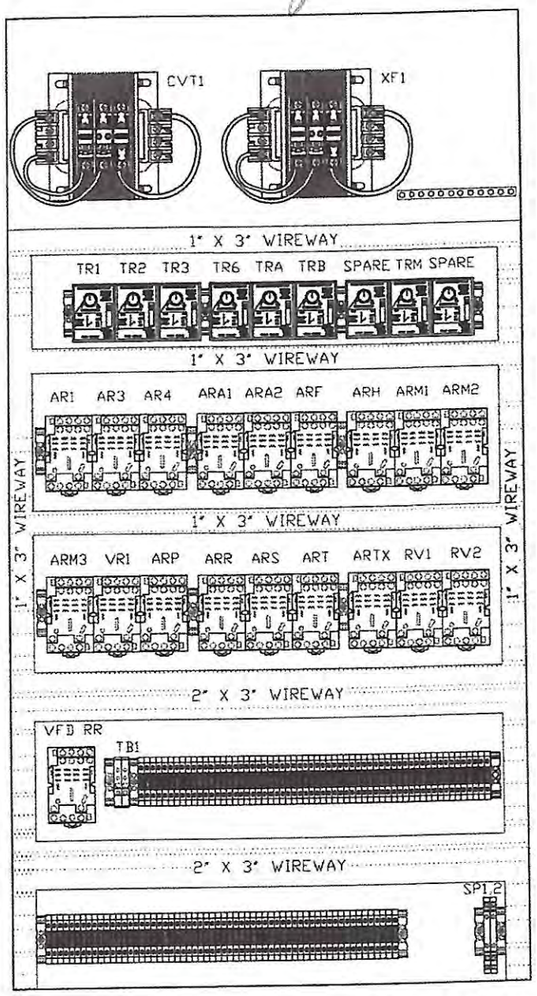
PUMP NO. 1 CONTROLS PARTS SCHEDULE

(SCHEMATICS ON SHEETS E10 - E11)



GENERAL NOTES:

1. SCOPE OF WORK REQUIRES THE REMOVAL OF ALL EXISTING TRANSFORMERS, RELAYS, WIREWAY, ETC CURRENTLY USED FOR PUMP NO. 1 SPEED CONTROLS. THE EXISTING COMPONENTS FOR THE PUMP NO. 1 SPEED CONTROLS ARE LOCATED IN CUBICLE 4A OF THE PUMP CONTROL CENTER. CONTRACTOR SHALL PROVIDE NEW BACKPANEL AND COMPONENTS AS SHOWN AND FOLLOW THE SCHEMATIC DIAGRAMS ON SHEETS E10 AND E11. THE NEW CONTROL PANEL SHALL BE INSTALLED IN THE PROPOSED VFD CABINET LOCATED TO THE EAST. ALL PILOT DEVICES AND VFM HMI SHALL BE MOUNTED ON THE VFD DOOR AS SHOWN ON SHEET E6.
2. PROVIDE TERMINAL BLOCKS, SQUARE D TYPE 3004362 AS REQUIRED.
3. PROVIDE TERMINAL JUMPERS, PHOENIX CONTACT 0203519 AS REQUIRED.
4. PROVIDE END CLAMPS, PHOENIX CONTACT 0800886 AS REQUIRED.
5. PROVIDE TERMINAL END COVERS, PHOENIX CONTACT 3003020 AS REQUIRED.
6. PROVIDE PRIMARY FUSES, BUSSMAN FNQR-3 AS REQUIRED.
7. PROVIDE SECONDARY FUSES, BUSSMAN FNQ-7 AS REQUIRED.
8. ALL DIN RAIL SHALL BE ALUMINUM.
9. MOTOR SPACE HEATER RELAY (VFD RR) SHALL BE LOCATED IN THE VFD ENCLOSURE AS SHOWN.

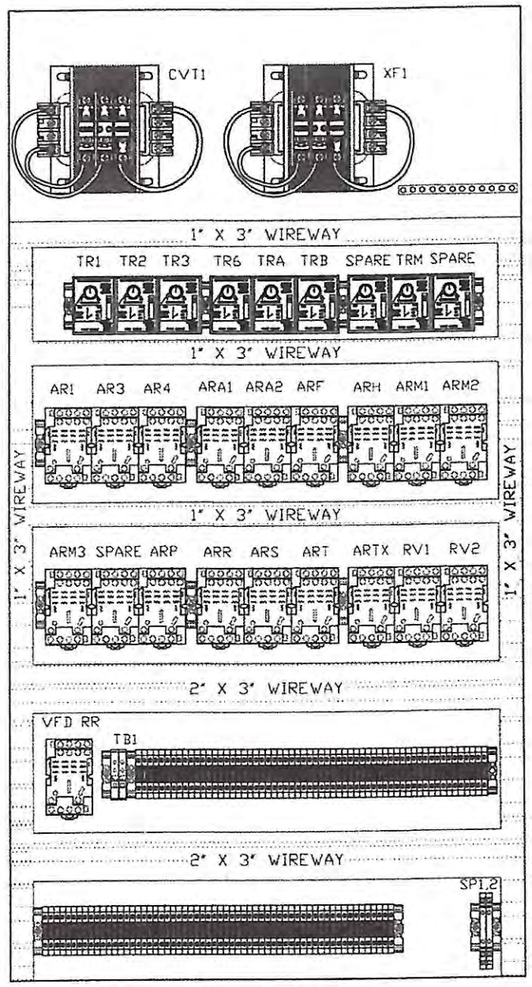
SECTION 4B, PUMP NO. 2 CONTROLS PARTS SCHEDULE

(SCHEMATICS ON SHEETS E14 - E15)



DETAIL 1, PUMP NO. 2
PROPOSED CONTROLS LAYOUT

NOTE: CONTROLS SHALL BE PLACED IN THE ORDER AS SHOWN

GENERAL NOTES:

1. SCOPE OF WORK REQUIRES THE REMOVAL OF ALL EXISTING TRANSFORMERS, RELAYS, WIREWAY, ETC. CURRENTLY USED FOR PUMP NO. 2 VFD CONTROLS. THE EXISTING COMPONENTS FOR THE PUMP NO. 2 VFD CONTROLS ARE LOCATED IN CUBICLE 4B OF THE PUMP CONTROL CENTER. CONTRACTOR SHALL PROVIDE NEW BACKPANEL AND COMPONENTS AS SHOWN. ALL CONTROL CONDUCTORS INTERIOR TO THE CUBICLE AND INSTALLED TO THE PUMP NO. 2 VFD (LOCATED IN ADJACENT SECTION 5) SHALL BE NEW. CONDUCTORS CURRENTLY INSTALLED TO FIELD DEVICES (LIMIT SWITCHES, VIBRATION TRANSMITTER POWER/RELAY CONTACTS, E-STOP AT MOTOR, ETC.) SHALL BE REUSED. NEW PILOT LIGHTS, SELECTOR SWITCHES, ETC. SHALL BE PROVIDED AND INSTALLED ON THE FRONT DOOR OF SECTION 5.
2. PROVIDE TERMINAL BLOCKS, SQUARE D TYPE 3004362 AS REQUIRED.
3. PROVIDE TERMINAL JUMPERS, PHOENIX CONTACT 0203519 AS REQUIRED.
4. PROVIDE END CLAMPS, PHOENIX CONTACT 0800886 AS REQUIRED.
5. PROVIDE TERMINAL END COVERS, PHOENIX CONTACT 3003020 AS REQUIRED.
6. PROVIDE PRIMARY FUSES, BUSSMAN FNQR-3 AS REQUIRED.
7. PROVIDE SECONDARY FUSES, BUSSMAN FNQ-7 AS REQUIRED.
8. ALL DIN RAIL SHALL BE ALUMINUM.
9. MOTOR SPACE HEATER RELAY (VFD RR) SHALL BE LOCATED IN THIS CUBICLE AS SHOWN.

MOTOR CONTROL CENTER FRONT ELEVATION

SCALE : 1/2" = 1'-0"

A
E1 | E16

KEYED NOTES:

1. EXISTING MOTOR CONTROL CENTER AND AUTOMATIC TRANSFER SWITCH LINEUP.
2. EXISTING ANNUNCIATOR NO. 1 TO BE REMOVED. CONTRACTOR SHALL PROVIDE AND INSTALL 1/4" ALUMINUM PLATE OVER EXISTING ANNUNCIATOR CUT-OUT. PAINT TO MATCH EXISTING SURFACE. CONTRACTOR TO PROVIDE AND INSTALL NEW MAPLE SYSTEMS HMI, GE PLC, ETC. TO SERVE AS NEW ANNUNCIATOR SYSTEM. REFER TO DETAILS ON SHEET E16.
3. CONTRACTOR SHALL REUSE TWO (2) OF THE EXISTING PUSH BUTTONS FOR INPUTS TO ANNUNCIATOR PLC. REFER TO SHEET E17 FOR DETAILS.
4. EXISTING ANNUNCIATOR NO. 2 TO BE REMOVED. CONTRACTOR SHALL PROVIDE AND INSTALL 1/4" ALUMINUM PLATE OVER EXISTING ANNUNCIATOR CUT-OUT. PAINT TO MATCH EXISTING SURFACE.
5. CONTRACTOR TO PROVIDE AND INSTALL 50-#14 + 2-#12 GND IN 1-1/2" CONDUIT TO NEW ANNUNCIATOR PLC (C6). PROVIDE AND INSTALL NEW 600V, 20A TERMINAL BLOCKS (ALLEN-BRADLEY 1492-W3) FOR NEW CONDUCTORS TO BE INSTALLED TO NEW ANNUNCIATOR PLC AND TO TERMINATE EXISTING CONDUCTORS (TO BE REUSED) FROM PUMP CONTROL CENTER. REFER ALSO TO GENERAL NOTES.
6. PROVIDE AND INSTALL 2-#12 + 1-#12 GND IN 3/4" C. TO 120/208V PANELBOARD FOR ANNUNCIATOR PLC 120V POWER (P30).
7. CONTRACTOR TO REMOVE EXISTING 480V, 100A, 3-POLE ODOR CONTROL CIRCUIT BREAKER AND INSTALL NEW 480V, 15A, 3-POLE CIRCUIT BREAKER FOR NEW KNIFE GATE VALVE ACTUATORS.
8. PROVIDE AND INSTALL NEW 3/4" CONDUIT WITH 3-#12 + 1-#12 GND DOWN TO ELEVATION 15.00' FOR NEW KNIFE GATE VALVE ACTUATORS (P20). CONTRACTOR TO FIELD ROUTE AS REQUIRED. REFER ALSO TO SHEET E2.
9. PROVIDE AND INSTALL NEW 3/4" CONDUIT WITH 2/C-#22 TWISTED SHIELDED CABLE (BELDEN 3106A) TO EXISTING SCADA PLC (C7). REFER ALSO TO SHEET E1.
10. NEW ANNUNCIATOR PLC SHALL BE INSTALLED BEHIND EXISTING DOOR.
11. CONTRACTOR TO PROVIDE AND INSTALL 22-#14 + 2-#12 GND IN 1-1/4" CONDUIT TO PUMP CONTROL CENTER CUBICLE 4A (C8).

GENERAL NOTES:

1. ALL DIN-RAIL SHALL BE ALUMINUM.
2. PROVIDE AND INSTALL ALL ASSOCIATED END BARRIERS, TERMINAL JUMPERS AND ACCESSORIES AS REQUIRED FOR TERMINAL BLOCKS.

1. CONTRACTOR SHALL PROVIDE AND INSTALL 1/4" ALUMINUM PLATE OVER EXISTING ANNUCIATOR CUT-OUT. PAINT TO MATCH EXISTING SURFACE.
2. PROVIDE AND INSTALL HUMAN MACHINE INTERFACE (HMI). MAPLE SYSTEMS HMI5150P. REFER TO SHEET E20 FOR PROPOSED ANNUNCIATOR SCREENS.
3. CONTRACTOR SHALL REMOVE EXISTING PUSH BUTTONS CURRENTLY UTILIZED FOR 'TEST' AND 'RESET'. PROVIDE APPROPRIATE PLUG FOR HOLE CREATED AFTER REMOVING EXISTING PUSH BUTTON. PAINT TO MATCH EXISTING SURFACE.
4. PROVIDE AND INSTALL NEW ALUMINUM BACKPLATE.
5. PROVIDE AND INSTALL PLC RACK. PLC RACK TO CONSIST OF : ONE (1) – GE RX3i CPU : IC695CPE305-ABAG; ONE (1) – SERIAL COMMUNICATION MODULE: GE IC695CMM004; THREE (3) DC INPUT MODULES: GE IC694MDL241; ONE (1) A/C RELAY MODULE: GE IC694MDL916; ONE (1) 120V POWER SUPPLY: GE IC695PSA140; ONE (1) 12-SLOT BACK PLANE: GE IC695CHS012.
6. PROVIDE AND INSTALL INCOMING 120V POWER SURGE PROTECTION DEVICES. PHOENIX CONTACT #2858357.
7. PROVIDE AND INSTALL 120V CIRCUIT BREAKER. 15 AMPERE SQUARE-D QOU115.
8. PROVIDE AND INSTALL 120VAC-24VDC POWER SUPPLY 'PS1' WITH 5 AMPERE OUTPUT. PHOENIX CONTACT #2866750.
9. PROVIDE AND INSTALL 2"X3" PANDUIT (OR EQUAL) WIRING SYSTEM WITH COVERS (TYPICAL).
10. PROVIDE AND INSTALL 120V, THERMAL CIRCUIT BREAKERS. REFER TO ANNUNCIATOR PLC WIRING DIAGRAM ON SHEET E15 FOR QUANTITIES AND SIZES. ALL THERMAL CIRCUIT BREAKERS SHALL BE PHOENIX CONTACT TCP TYPE.
11. PROVIDE AND INSTALL FUSE TERMINAL BLOCKS FOR DC POWER. PHOENIX CONTACT UK 5-HESI.
12. PROVIDE AND INSTALL MULTI-LEVEL TERMINAL BLOCKS. PHOENIX CONTACT #3044636.
13. PROVIDE AND INSTALL 700VA UPS. APC BR700G.
14. PROVIDE AND INSTALL ALARM HORN, WP, FEDERAL SIGNAL MODEL #350WB IN RED WP BACK BOX. HORN TO BE ON PANEL EXTERIOR.
15. PROVIDE AND INSTALL DUPLEX SERVICE RECEPTACLE. HUBBELL CRF20I OR EQUAL.
16. PROVIDE AND INSTALL SQUARE-D 8501 R SERIES (OR EQUAL) SPDT RELAYS WITH 120V COILS. PROVIDE RELAY BASE AND HOLD DOWN SPRING FOR RELAY.
17. PROVIDE AND INSTALL 24V DC LED CABINET LIGHT HOFFMAN CAT # LED24V15. PROVIDE BRACKET TO MOUNT FIXTURE TO BACKPANEL.
18. PROVIDE AND INSTALL REMOTE DOOR SWITCH SWITCH AND ASSOCIATED DOOR SWITCH CABLE FOR 24V DC LED CABINET LIGHT. HOFFMAN CAT # ALFSWD.
19. PROVIDE AND INSTALL SURGE PROTECTION DEVICES FOR 24V DC DISCRETE INPUT CIRCUITS. PHOENIX CONTACT #2794699.
20. CONTRACTOR SHALL REUSE EXISTING PUSH BUTTON 'ACKNOWLEDGE' FOR INPUTS TO ANNUNCIATOR PLC.
21. CONTRACTOR SHALL REUSE EXISTING PUSH BUTTON 'SILENCE' FOR INPUTS TO ANNUNCIATOR PLC.
22. ALUMINUM DIN RAIL (TYPICAL)

GENERAL NOTES :

1. PROVIDE AND INSTALL ALL ASSOCIATED END BARRIERS, TERMINAL JUMPERS AND ACCESSORIES AS REQUIRED FOR TERMINAL BLOCKS, FUSE HOLDERS AND SURGE PROTECTION DEVICES SHOWN AS REQUIRED.

CONDUIT AND CABLE SCHEDULE

CONDUIT No.	SIZE	NUMER OF CONDUCTORS/SIZE	FROM	TO	REMARKS
P10	4"	3-500kcmil + 1-2/0 GND	PUMP CONTROL CENTER SECTION #3	PUMP NO. 1 VFD	POWER LEADS. PROVIDE NEW CONDUIT/CONDUCTORS (TO EXISTING PULL BOX)
P11	4"	3-500kcmil + 1-2/0 GND	PUMP CONTROL CENTER SECTION #3	PUMP NO. 1 VFD	POWER LEADS. PROVIDE NEW CONDUIT/CONDUCTORS (TO EXISTING PULL BOX)
P12	4"	3-500kcmil + 1-2/0 GND	PUMP NO. 1 VFD	PUMP MOTOR NO. 1	POWER LEADS. PROVIDE NEW CONDUIT/CONDUCTORS. PROVIDE ALUMINUM CORE, LIQUID TIGHT, FLEXIBLE CONNECTION TO MOTOR
P13	4"	3-500kcmil + 1-2/0 GND	PUMP NO. 1 VFD	PUMP MOTOR NO. 1	POWER LEADS. PROVIDE NEW CONDUIT/CONDUCTORS. PROVIDE ALUMINUM CORE, LIQUID TIGHT, FLEXIBLE CONNECTION TO MOTOR
P20	3/4"	3-#12 + 1-#12 GND	MOTOR CONTROL CENTER, 1B	NEW JB AT ELEV 15.00'	KNIFE GATE VALVE ACTUATORS - 480V FEEDER. PROVIDE NEW CONDUIT/CONDUCTORS. FIELD ROUTE DOWN TO ELEVATION 15.00'.
P21	3/4"	3-#12 + 1-#12 GND	NEW JB AT ELEV 15.00'	NEW PUMP NO. 1 ACTUATOR	480V FEEDER. PROVDE NEW CONDUIT/CONDUCTORS.
P22	3/4"	3-#12 + 1-#12 GND	NEW JB AT ELEV 15.00'	NEW PUMP NO. 2 ACTUATOR	480V FEEDER. PROVIDE NEW CONDUIT/CONDUCTORS.
P23	3/4"	3-#12 + 1-#12 GND	NEW JB AT ELEV 15.00'	NEW PUMP NO. 3 ACTUATOR	480V FEEDER. PROVIDE NEW CONDUIT/CONDUCTORS.
P30	3/4"	2-#12 + 1-#12 GND	EXISTING 120/208V PANELBOARD	NEW ANNUNCIATOR PLC	ANNUNCIATOR PLC 120V POWER. PROVIDE NEW CONDUIT/CONDUCTORS.
P40	3/4"	2-#12 + 1-#12 GND	EXISTING 120/208V PANELBOARD	LIQUID LEVEL CONTROLS	NEW FLOW METER TRANSMITTER, BARGRAPH INDICATORS AND DIGITAL PANEL METERS 120V POWER PROVIDE NEW CONDUIT/CONDUCTORS.
P50	3/4"	2-#10 + 1-#10 GND	PUMP NO. 1 VFD	PUMP MOTOR NO. 1	MOTOR SPACE HEATER 120V POWER. PROVIDE NEW CONDUIT/CONDUCTORS. PROVIDE NON-METALLIC, FLEXIBLE CONNECTION TO MOTOR
P60	3/4"	6-#12 + 1-#12 GND	PUMP NO. 1 VFD	VIBRATION TRANS ELEV 41.25'	VIBRATION TRANSMITTER 120V POWER AND ALARM RELAY OUTPUTS. PROVIDE NEW CONDUIT/CONDUCTORS FROM NEW TRANSMITTER AT ELEVATION 41.25'.
P61	3/4"	6-#12 + 1-#12 GND	PUMP NO. 2 VFD	VIBRATION TRANS ELEV 41.25'	VIBRATION TRANSMITTER 120V POWER AND ALARM RELAY OUTPUTS. PROVIDE NEW CONDUIT/CONDUCTORS FROM NEW TRANSMITTER AT ELEVATION 41.25'.
P62	3/4"	6-#12 + 1-#12 GND	PUMP NO. 3 VFD	VIBRATION TRANS ELEV 41.25'	VIBRATION TRANSMITTER 120V POWER AND ALARM RELAY OUTPUTS. PROVIDE NEW CONDUIT/CONDUCTORS FROM NEW TRANSMITTER AT ELEVATION 41.25'.
1 P70	3/4"	6-#12 + 1-#12 GND	PUMP NO. 1 VFD	ROBERTSHAW VIBRASWITCH	VIBRASWITCH 120V POWER, RESET AND ALARM RELAY OUTPUT (VIA TERMINAL BOX AT PUMP MOTOR NO.). PROVIDE NEW CONDUIT/CONDUCTORS.
P80	3/4"	2-#12 + 1-#12 GND	PUMP NO. 1 VFD	MOTOR NO. 1 THERMAL SWITCH	THERMAL SWITCH CONTACT (VIA TERMINAL BOX AT PUMP MOTOR NO 1). PROVIDE NEW CONDUIT/CONDUCTORS.
P90	3/4"	2-#12 + 1-#12 GND	EXISTING 120/208V PANELBOARD	LIQUID LEVEL CONTROLS	NEW SIGNAL ISOLATORS/CONVERTERS 120V POWER PROVIDE NEW CONDUIT/CONDUCTORS.
1 C1	1-1/2"	36-#14 + 2-#12 GND	PUMP CONTROL CENTER CUBICLE 4A	PUMP NO. 1 VFD	PROVIDE NEW CONDUIT/CONDUCTORS. COUNT INCLUDES SPARES.
C2	2"	50-#12 + 2-#12 GND	PUMP NO. 1 VFD	T.B. AT PUMP MOTOR NO. 1	PROVIDE NEW CONDUIT/CONDUCTORS. COUNT INCLUDES SPARES.
C3	1-1/4"	FOUR - 2/C #16 TW-SH	PUMP 1 VIB/TEMP TRANS ELEV 41.25'	EXISTING SCADA PLC	FOUR (4): 2/C-#16 (BELDEN 8719 EACH) FOR PUMP AND MOTOR VIBRATION & TEMPERATURE ANALOG SIGNALS VIA NEW TERMINAL BLOCKS IN SECTION 3.
1 C4	EX	2-#14 + 1-#14 GND	LIQUID LEVEL CONTROLS (LLC)	PUMP NO. 1 VFD	VFD START AND PUMP READY SIGNALS TO/FROM LLC. PROVIDE NEW CONDUCTORS AND UTILIZE EXISTING RACEWAY FROM LLC TO SECTION 3.
C5	EX	SUPPLIED BY MANUFACTURER	LIQUID LEVEL CONTROLS (LLC)	NEW FM TRANSMITTER	MANUFACTURER SUPPLIED CABLE TO FLOW METER IN EX CONDUIT 2/C #16 (BELDEN 8719) FROM TRANSMITTER TO SCADA PLC
C6	1-1/2"	50-#14 + 2-#12 GND	EXISTING ANNUNCIATOR NO. 2	NEW ANNUNCIATOR PLC	PROVIDE NEW CONDUIT/CONDUCTORS. CONDUCTOR COUNT INCLUDES SPARES.
C7	3/4"	ONE - 2/C #22 TW-SH W/GND	EXISTING SCADA PLC	NEW ANNUNCIATOR PLC	2/C #22 (BELDEN 3106A) FOR NEW ANNUNCIATOR PLC COMMUNICATIONS TO EXISTING SCADA PLC. PROVIDE NEW CONDUIT/CONDUCTORS
C8	1-1/4"	22-#14 + 2-#12 GND	PUMP CONTROL CENTER CUBICLE 4A	NEW ANNUCIATOR PLC	PROVIDE NEW CONDUIT/CONDUCTORS. COUNT INCLUDES SPARES.
C9	EX	2-#14 + 1-#14 GND	PUMP CONTROL CENTER CUBICLE 4A	EXISTING SCADA PLC	VFD SIGNALS TO EXISTING SCADA PLC. PROVIDE NEW CONDUCTORS AND UTILIZE EXISTING RACEWAY FROM SECTION 3 TO SCADA PLC.
C10	1"	THREE - 2/C #16 TW-SH	PUMP NO. 1 VFD	EXISITNG SCADA PLC	THREE (4): 2/C-#16 (BELDEN 8719 EACH) FOR VFD SPEED CONTROL, SPEED REFERENCE (ONE SPARE) ANALOG SIGNALS VIA NEW TERMINAL BLOCKS IN SECTION 3
1 C11	1-1/4"	FOUR - 2/C #16 TW-SH	PUMP 2 VIB/TEMP TRANS ELEV 41.25'	EXISTING SCADA PLC	FOUR (4): 2/C-#16 (BELDEN 8719 EACH) FOR PUMP AND MOTOR VIBRATION & TEMPERATURE ANALOG SIGNALS VIA NEW TERMINAL BLOCKS IN SECTION 3
C12	1-1/4"	FOUR - 2/C #16 TW-SH	PUMP 3 VIB/TEMP TRANS ELEV 41.25'	EXISTING SCADA PLC	FOUR (4): 2/C-#16 (BELDEN 8719 EACH) FOR PUMP AND MOTOR VIBRATION & TEMPERATURE ANALOG SIGNALS VIA NEW TERMINAL BLOCKS IN SECTION 3
C13	3/4"	6-#14 + 1-#12 GND	PUMP CONTROL CENTER CUBICLE 4A	NEW ACE3600 CABINET	PUMP NO. 1 FAULT, RUNNING AND NOT READY SIGNALS
C14	3/4"	6-#14 + 1-#12 GND	PUMP CONTROL CENTER CUBICLE 4B	NEW ACE3600 CABINET	PUMP NO. 2 FAULT, RUNNING AND NOT READY SIGNALS
C15	3/4"	6-#14 + 1-#12 GND	PUMP CONTROL CENTER CUBICLE 7	NEW ACE3600 CABINET	PUMP NO. 3 FAULT, RUNNING AND NOT READY SIGNALS
C16	3/4"	6-#14 + 1-#12 GND	NEW ACE3600 CABINET	NEW ANNUNCIATOR PLC	PUMP NO. 1, PUMP NO. 2 AND PUMP NO. 3 FAULT SIGNALS.
C17	1-1/4"	FOUR - 2/C #16 TW-SH	LIQUID LEVEL CONTROLS	EXISTING SCADA PLC	FOUR (4): 2/C-#16 (BELDEN 8719 EACH) FOR WET WELL WEST AND WET WELL EAST LEVEL, FLOW METER NO. 1 AND FLOW METER NO. 2 4-20mA ANALOG SIGNALS.
C18	1-1/4"	FOUR - 2/C #16 TW-SH	LIQUID LEVEL CONTROLS	NEW ACE3600 CABINET	FOUR (4): 2/C-#16 (BELDEN 8719 EACH) FOR WET WELL WEST AND WET WELL EAST LEVEL; FLOW METER NO. 1 AND FLOW METER NO. 2 4-20mA ANALOG SIGNALS.
C19	1-1/2"	32-#14 + 1-#12 GND	NEW ACE3600 CABINET	EXISTING SCADA PLC	WET WELL HIGH, DRY WELL HIGH, PUMP NO. 1 RUNNING, PUMP NO. 1 READY, PUMP NO. 2 RUNNING, PUMP NO. 2 READY, PUMP NO. 3 RUNNING, PUMP NO. 3 READY, TECO POWER, MAIN CIRCUIT BREAKER, GEN RUNNING, GEN FIRE ALARM AND LOW PSI SIGNALS. COUNT INCLUDES SPARES.
C20	3/4"	6-#14 + 1-#12 GND	LIQUID LEVEL CONTROLS	NEW ACE3600 CABINET	WET WELL HIGH, DRY WELL HIGH AND LOW PSI SIGNALS. COUNT INCLUDES SPARES. CONTRACTOR TO FIELD VERIFY ORIGIN OF RELAY CONTACTS.
C21	3/4"	6-#14 + 1-#12 GND	MCC/ATS	NEW ACE3600 CABINET	TECO POWER AVAILABLE AND MAIN CIRCUIT BREAKER OPEN SIGNALS. COUNT INCLUDES SPARES. CONTRACTOR TO FIELD VERIFY ORIGIN OF RELAY CONTACTS.
C22	3/4"	6-#14 + 1-#12 GND	GENERATOR CONTROL PANEL	NEW ACE3600 CABINET	GENERATOR RUNNING AND GENERATOR FIRE ALARM SIGNALS. COUNT INCLUDES SPARES. CONTRACTOR TO FIELD VERIFY ORIGIN OF RELAY CONTACTS.

KEYED NOTES:

1. PROVIDE AND INSTALL 48"H X 36"W X 10"D NEMA 4X 316 SS ENCLOSURE WITH 3-POINT PADLOCKABLE LATCHING SYSTEM AND DOOR STOP KIT. HAMMOND HW483610SS16HK.
2. PROVIDE AND INSTALL BACKPANEL. HAMMOND 18P4533.
3. PROVIDE AND INSTALL GROUND BAR SYSTEM PANDUIT UGB2/0-414-12
4. PROVIDE AND INSTALL ONE (1) MOTOROLA ACE3600 PLC-3640 CPU, PART#: V446; ONE (1) AC POWER SUPPLY 100-240V, PART#: V261; ONE (1) ACE MIXED I/O MODULE-16DI, 4DO(EE), (4)±20mA ANALOG IN, PART#: V245 WITH 24VDC PLUG-IN; TWO (2) BLANK I/O MODULES PART#: V20; ONE (1) 40 WIRE CABLE WITH TB HOLDER 3M, PART#: V358; ONE (1) 20 PIN TB HOLDER KIT, PART#: V158, ONE (1) 40 PIN TB HOLDER KIT, PART#: V153; ONE (1) ACE3600 3-SLOT FRAME, PART#: V103; ONE (1) METAL CHASSIS, PART#: V214; ONE (1) MOTOROLA XPR5350 RADIO; ONE (1) 10Ah 12V DC BATTERY AND CABLES, PART#: V328
5. PROVIDE AND INSTALL TWO (2)-MIXED I/O AUXILIARY INTERFACES. WILKERSON BOARD, PART#: SIB V245/V453.
6. PROVIDE AND INSTALL 120V AC SURGE PROTECTION DEVICE. PHOENIX CONTACT #2905228.
7. PROVIDE AND INSTALL 120V, 15 AMPERE, SINGLE-POLE CIRCUIT BREAKER. SQUARE D QOU-115.
8. PROVIDE AND INSTALL TERMINAL BLOCKS. 30 AMPERE RATING, PHOENIX CONTACT UK5N TYPE.
9. PROVIDE AND INSTALL 120V, 1 AMPERE THERMAL CIRCUIT BREAKER. THERMAL CIRCUIT BREAKERS SHALL BE PHOENIX CONTACT TCP TYPE. PROVIDE WITH SCREW TYPE CONNECTION, FUSE BASE TERMINAL BLOCK, PHOENIX CONTACT TYPE UK 6-FSI/C.
10. PROVIDE AND INSTALL 120VAC-24VDC POWER SUPPLY WITH 5 AMPERE OUTPUT. PHOENIX CONTACT #2866750.
11. PROVIDE AND INSTALL FUSED TERMINAL BLOCK, PHOENIX CONTACT UK 5-HESI TYPE. PROVIDE 5 A FUSE WITH TERMINAL BLOCK.
12. PROVIDE AND INSTALL 3PDT RELAYS WITH 24V DC COILS AND 10 AMPERE CONTACTS. POTTER AND BRUMFIELD KRPA-14AG-24, 8 PIN PLUG-IN TYPE. PROVIDE SOCKET AND HOLD DOWN SPRING FOR EACH RELAY.
13. EXISTING CISCO RV042 WAN ISP ROUTER TO BE RELOCATED FROM THE MOSCAD L RTU TO BE REPLACED UNDER THIS REVISION.
14. EXISTING ARRIS DG1670 CABLE MODEM TO BE RELOCATED FROM THE MOSCAD L RTU TO BE REPLACED UNDER THIS REVISION.
15. PROVIDE AND INSTALL GFI RECEPTACLE, HUBBELL, GFR5352IA OR EQUAL FOR CABLE MODEM AND CISCO RV042 ROUTER.
16. PROVIDE AND INSTALL 300 MHZ TO 1.2 GHZ COAXIAL RF SURGE PROTECTOR. IPOLYPHASER IUSX-NFF. (VERIFY COAXIAL CABLE CONNECTION REQUIREMENTS PRIOR TO ORDERING)
17. PROVIDE AND INSTALL 2" X X 5" L X 1/4" COPPER GROUNDING PLATE (CUSTOM).
18. PROVIDE AND INSTALL SINGLE BARREL ONE-HOLE COPPER GROUNDING LUG. PANDUIT HLT-25-X
19. PROVIDE AND INSTALL 1"X3" PANDUIT (OR EQUAL) WIRING SYSTEM WITH COVERS (TYPICAL).
20. PROVIDE AND INSTALL 120V AC LED CABINET LIGHT WITH INTEGRAL LIGHT SWITCH. HAMMOND FLK7LED.
21. PROVIDE AND INSTALL TERMINAL BLOCKS FOR 4-20mA SIGNALS AND SHIELDS. PHOENIX CONTACT UK5N TYPE.

GENERAL NOTES:

1. PROVIDE AND INSTALL ALL ASSOCIATED END BARRIERS, TERMINAL JUMPERS AND SPACERS AS REQUIRED FOR TERMINAL BLOCKS, FUSE HOLDERS AND DEVICES SHOWN OR REQUIRED.
2. PROVIDE AND INSTALL 35mm ALUMINUM DIN RAIL (AUTOMATION DIRECT DN-R35SAL1) QUANTITY AS REQUIRED.
3. PROVIDE AND INSTALL CORROSION INHIBITOR, HOFFMAN # AHCI10E.

GENERAL NOTES

G-1. CONTRACTOR SHALL COORDINATE ALL CONSTRUCTION ACTIVITIES WITH CONTRACT ADMINISTRATOR DEPARTMENT, WASTEWATER PERSONNEL AND PUMPING STATION OPERATIONS.

G-2. EXISTING DIMENSIONS AND ELEVATIONS ARE BASED ON THE BEST INFORMATION AVAILABLE. TRUE DIMENSIONS AND ELEVATIONS SHALL BE DETERMINED IN THE FIELD BY THE CONTRACTOR PRIOR TO LAYOUT AND SHOP DRAWING SUBMITTALS.

G-3. ALL SUBMITTALS AND SHOP DRAWINGS SHALL BE ORIGINALS OR HIGH-QUALITY COPIES (EASILY READABLE). NO FAXED SHEETS OR POOR QUALITY COPIES WILL BE ACCEPTED FOR SUBMITTAL REVIEW.

G-4. MECHANICAL AND ELECTRICAL EQUIPMENT TO BE LOCKED OUT SHALL BE LOCKED OUT WITH A MULTIPLE-LOCK MASTER LOCK-OUT DEVICE, WHICH SHALL BE INSTALLED BY CITY PERSONNEL AND LOCKED BY BOTH THE CITY PERSONNEL AND CONTRACTOR.

G-5. THE CONTRACTOR IS RESPONSIBLE FOR PROVIDING, INSTALLING, LEVELING AND ALIGNING EQUIPMENT, GATES, AND VALVES.

G-6. PROPOSED SLIDE GATE VALVE SHALL BE A STAINLESS-STEEL SLIDE GATE, AS MADE BY RODNEY HUNT OR EQUAL; SEE SPECIFICATIONS FOR DETAILS. SLIDE GATE VALVE SHALL BE EQUIPPED WITH ELECTRIC POWERED ACTUATOR, AS MADE BY ROTORK, LIMITORQUE, OR EQUAL; SEE SPECIFICATIONS FOR DETAILS.

G-7 PROPOSED AUTOMATIC BAR SCREEN AND WASHER COMPACTOR SHALL BE STAINLESS STEEL AS MADE BY HYDRODYNE INC. OR EQUAL, SEE SPECS FOR DETAILS.

G-8. ANCHOR BOLTS SHALL BE AS PER SCREEN MANUFACTURER'S RECOMMENDATIONS. ANCHOR BOLTS SHALL BE DOUBLE-NUTTED AND FINISHED WITH NON-SHRINK GROUT. ALL BOLTS SHALL EXTEND BEYOND THE FASTENING NUTS BY A MINIMUM OF 1/2-INCH.

G-9. ALL STEEL AND HARDWARE, UNLESS OTHERWISE NOTED, SHALL BE TYPE 316 STAINLESS STEEL.

G-10. ALL CEMENTITIOUS CONCRETE AND GROUT, UNLESS OTHERWISE SPECIFIED, SHALL BE CLASS "B" 4000 PSI COMPRESSIVE STRENGTH AT 28 DAYS.

G-11. EXPOSED CONCRETE CORNERS SHALL HAVE A 3/4" CHAMFER AND RE-ENTRANT CORNERS SHALL HAVE A 3/4" FLAT FILLET UNLESS OTHERWISE NOTED.

G-12. CONCRETE PEDESTAL SHOP DRAWINGS INCLUDING FLANGE SUPPORT DETAILS SHALL BE SUBMITTED FOR APPROVAL.

G-13. ALL STEEL REINFORCING SHALL BE DETAILED ACCORDING TO THE LATEST "ACI MANUAL OF STANDARD PRACTICE FOR DETAILING REINFORCED CONCRETE STRUCTURES". ACTUAL PLACEMENT OF STEEL REINFORCING SHALL BE SHOWN ON SHOP DRAWINGS. ALL LAPS AND SPLICES SHALL BE AT LEAST 32 BAR DIAMETERS OR 24 INCHES.

G-14. CERTAIN PORTIONS OF THIS PROJECT MAY REQUIRE NIGHT TIME WORK.

G-15. ALL NOTES PERTAINING TO PROPOSED WORK INSIDE SCREEN ROOM ARE LOCATED ON PERTINENT SHEETS.

G-16. ALL WORK SHALL BE PERFORMED IN ACCORDANCE WITH THE FLORIDA BUILDING CODE 6TH EDITION 2017, AND CHAPTER 5 OF THE CITY OF TAMPA CODE.

G-17. CONTRACTOR SHALL REMOVE EXISTING WET WELL STOP LOGS FOR THE REPLACEMENT WITH SLIDE GATE.

G-18. CONFIGURATION FOR THE PROPOSED SLIDE GATE VALVE ACTUATORS SHALL BE AS INDICATED IN THE PLANS.

G-19. ALL ELECTRICAL WORK SHALL BE PERFORMED IN ACCORDANCE WITH THE FLORIDA BUILDING CODE 6TH EDITION 2017, CHAPTER 5 OF THE CITY OF TAMPA CODE AND THE NATIONAL FIRE PROTECTION ASSOCIATION (NFPA) SERIES 70/NATIONAL ELECTRICAL CODE (NEC) 2014 EDITION.

G-20. CONTRACTOR SHALL OBTAIN A TEMPORARY TRAFFIC CONTROL PERMIT FOR THE ROAD CLOSURE INCLUDING A CERTIFIED MOT.

DEMOLITION NOTES

D-1. ALL DIMENSIONS ARE APPROXIMATE. TRUE DIMENSIONS SHALL BE DETERMINED IN THE FIELD.

D-2. SALVAGEABLE MATERIAL, AS DETERMINED BY DEPARTMENT PERSONNEL, SHALL BE DELIVERED TO THE CITY OF TAMPA'S HOWARD F. CURREN AWTP AT 2700 MARITIME BOULEVARD. NON-SALVAGEABLE MATERIALS ARE TO BE REMOVED FROM THE SITE AND PROPERLY DISPOSED OF AT THE CONTRACTOR'S EXPENSE. IN GENERAL, ALL PUMPS AND CONTROLS EQUIPMENT SHALL REMAIN PROPERTY OF THE CITY AND SHALL BE DELIVERED TO THE TREATMENT PLANT.

D-3. EXISTING MANUALLY RAKED BAR SCREEN SHALL BE SALVAGED AND DELIVERED TO THE TREATMENT PLANT.

D-4. THE PUMP STATION SITE SHALL BE MAINTAINED IN AS NEAT AND ORDERLY CONDITION AS POSSIBLE DURING CONSTRUCTION OPERATIONS. WALKWAYS AND DRIVEWAYS SHALL BE KEPT CLEAR FOR DEPARTMENT PERSONNEL TO PASS THROUGH.

D-5. CONTRACTOR SHALL CUT ALL EXPOSED REINFORCING STEEL TO A DEPTH OF 1-INCH BELOW THE EXPOSED SURFACE AND GROUT OVER.

D-6. CONTRACTOR SHALL PREVENT DUST NUISANCE FROM THE OPERATIONS. CONTRACTOR SHALL SPRINKLE RUBBISH AND DEBRIS WITH WATER TO KEEP DUST TO A MINIMUM.

D-7. CONTRACTOR SHALL CLEAN AND REMOVE ALL DEBRIS FROM EXISTING WET WELL PRIOR TO CONCRETE RESTORATION.

"POSSIBLE" CONSTRUCTION SEQUENCE

S-1. CONTRACTOR SETS UP MOT AND INSTALLS BYPASS PUMPING SYSTEM. TEST BYPASS SYSTEM WHILE PUMP STATION IS TURNED OFF. ALL BYPASS PUMPS MUST OPERATE DURING TEST PERIOD. TESTING WILL REQUIRE 24 HOUR TROUBLE FREE OPERATION BEFORE SETTING PIPE PLUGS.

S-2. CONTRACTOR INSTALLS (2) PIPE PLUGS IN 60" INFLUENT PIPE AND BEGINS BYPASS PUMPING.

S-3. CONTRACTOR CLEANS AND REPAIRS CONCRETE AND LINER WITHIN WET WELL.

S-4. INSTALL PROPOSED SCREEN, SLIDE GATE, CONVEYOR, AND LOADOUT AREA.

S-5. PERFORM REQUIRED TESTS ON PROPOSED SCREENING SYSTEM.

S-6 REMOVE BYPASS SYSTEM AND MOT.

S-7. PERFORM TRAINING, COMPLETE PUNCH LIST ITEMS.

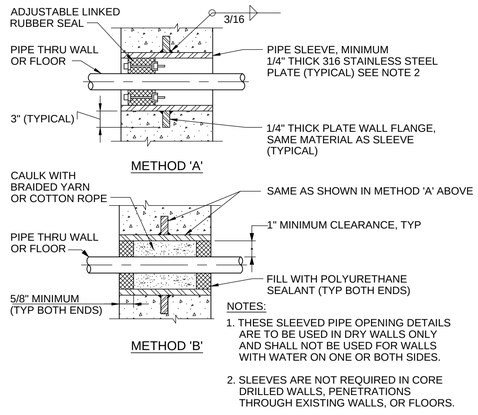
NOTES:

1. WHERE SUBMERGED, PIPE CLAMP, ANCHORS, SHIELD, NUTS AND LOCKWASHER TO BE TYPE 316 STAINLESS STEEL.
2. WHEN USED WITH PVC OR FIBERGLASS PIPE, PROVIDE STEEL SHIELD WITH LOOSE FIT AROUND PIPE AT CLAMP. WRAP COPPER TUBING WITH 2" WIDE STRIP OF RUBBER AT CLAMP.
3. FOR FLANGED PIPING, INCREASE 'B' DIMENSION AS REQUIRED.

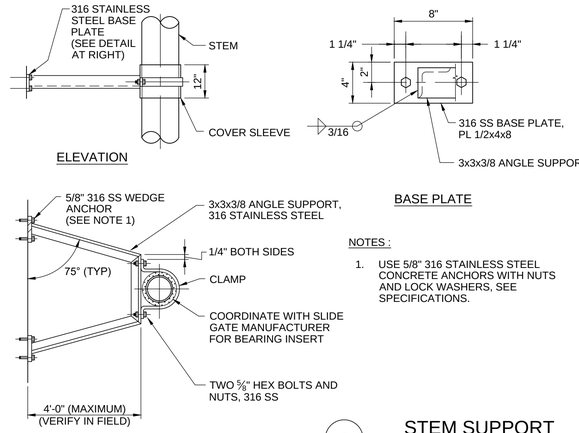
A PIPE CLAMP FOR INDIVIDUAL PIPES
(FOR PIPE 8" DIAMETER AND SMALLER)



NOTES:

1. THESE SLEEVED PIPE OPENING DETAILS ARE TO BE USED IN DRY WALLS ONLY AND SHALL NOT BE USED FOR WALLS WITH WATER ON ONE OR BOTH SIDES.
2. SLEEVES ARE NOT REQUIRED IN CORE DRILLED WALLS, PENETRATIONS THROUGH EXISTING WALLS, OR FLOORS.

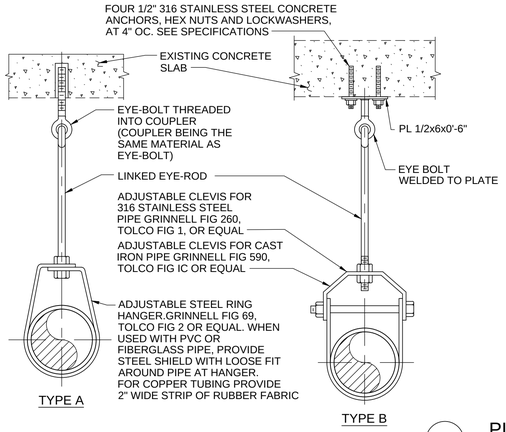
B SLEEVED PIPE OPENING



NOTES :

1. USE 5/8" 316 STAINLESS STEEL CONCRETE ANCHORS WITH NUTS AND LOCK WASHERS, SEE SPECIFICATIONS.

C STEM SUPPORT

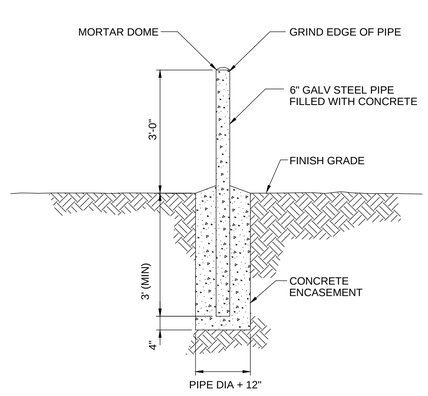


PIPE HANGER RODS AND SUPPORT SPACING					
PIPE DIAMETER (INCHES)	ROD DIAMETER (INCHES)	MAX SUPPORT SPACING (FEET)		WEIGHT LIMIT (LBS)	
		STEEL PIPE	CI PIPE	TYPE A	TYPE B
1 & SMALLER	3/8	6	10	300	610
1 1/4 TO 2	3/8	10	10	300	610
2 1/2 TO 3 1/2	1/2	12	10	525	1130
4 TO 5	5/8	14	10	650	1430
6, 8	3/4	17	10	1000	1940
10, 12	7/8	18	---	---	3600
14, 16	1	20	---	---	3800

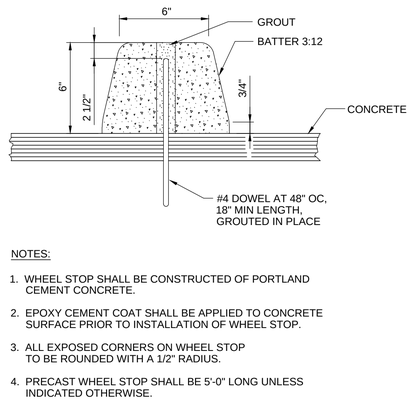
NOTES:

1. DESIGN IS FOR STATIC LOAD, ONLY.
2. FOR ADDITIONAL REQUIREMENTS SEE SPECIFICATION SECTION 'PIPE SUPPORTS'.
3. ALL HANGER COMPONENTS SHALL BE 316 STAINLESS STEEL.

D PIPE HANGER FOR EXISTING CONCRETE
(FOR PIPE 16" DIAMETER AND SMALLER)



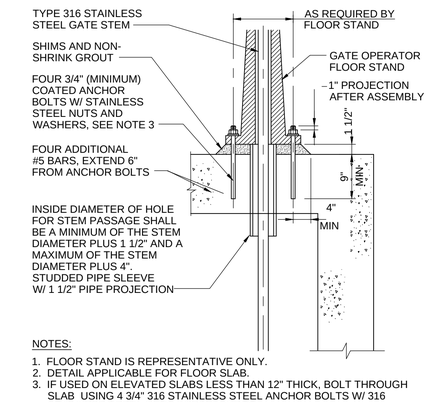
E GUARD POST



NOTES:

1. WHEEL STOP SHALL BE CONSTRUCTED OF PORTLAND CEMENT CONCRETE.
2. EPOXY CEMENT COAT SHALL BE APPLIED TO CONCRETE SURFACE PRIOR TO INSTALLATION OF WHEEL STOP.
3. ALL EXPOSED CORNERS ON WHEEL STOP TO BE ROUNDED WITH A 1/2" RADIUS.
4. PRECAST WHEEL STOP SHALL BE 5'-0" LONG UNLESS INDICATED OTHERWISE.

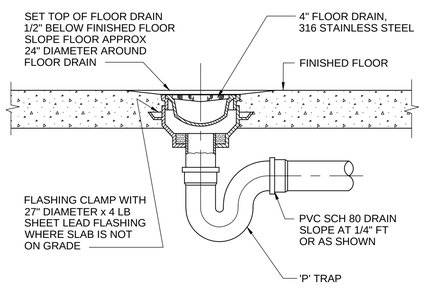
F PRECAST WHEEL STOP



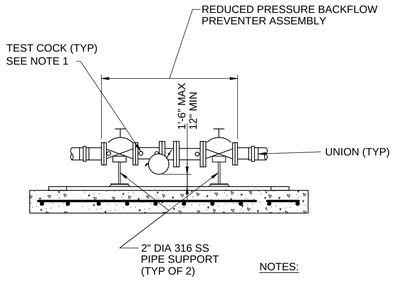
NOTES:

1. FLOOR STAND IS REPRESENTATIVE ONLY.
2. DETAIL APPLICABLE FOR FLOOR SLAB.
3. IF USED ON ELEVATED SLABS LESS THAN 12" THICK, BOLT THROUGH SLAB USING 4 3/4" 316 STAINLESS STEEL ANCHOR BOLTS W/ 316 STAINLESS STEEL NUTS AND WASHERS.

G FLOOR STAND INSTALLATION



H FLOOR DRAIN



NOTES:

1. TEST COCKS AND SHUT-OFF MUST BE SUPPLIED AS SHOWN.
2. DISCHARGE PORT MUST BE KEPT CLEAR OF OBSTRUCTION AT ALL TIMES.

DESCRIPTION:
MECHANICAL
STANDARD DETAILS

DATE: AUGUST 2018
GSP JOB No. 4291800
SHEET: M-7 9 OF 27

GENERAL

1. CODES:

   A. GOVERNING BUILDING CODE FOR DESIGN OF BUILDING STRUCTURE IS 2017 FLORIDA BUILDING CODE.

   B. REFERENCES TO NATIONAL STANDARDS/CODES SHALL BE TO EDITION ADOPTED BY GOVERNING BUILDING CODE REFERENCED HEREIN. WHERE BUILDING CODE DOES NOT REFERENCE STANDARDS, LATEST EDITION OF STANDARD PUBLISHED PRIOR TO DATE OF BUILDING CODE ADOPTION.

   C. REVIEW(ED) INDICATES REVIEW(ED) AND COMMENTED BY ARCHITECT/ENGINEER IN WRITING.

2. CONTRACT DOCUMENTS:

   A. FOLLOWING NOTES ARE APPLICABLE TO CONTRACT DOCUMENTS. IN INSTANCE OF A DISCREPANCY, MOST STRINGENT REQUIREMENT SHALL APPLY, EXCEPT WHERE CLARIFIED BY ARCHITECT/ENGINEER.

   B. USE STRUCTURAL DRAWINGS IN CONJUNCTION WITH COMPLETED CONTRACT DOCUMENTS, INCLUDING SPECIFICATIONS. COORDINATE REQUIREMENTS OF TRADES INTO SHOP DRAWINGS AND CONSTRUCTION.

   C. CONSTRUCT WORK NOT FULLY INDICATED OR SPECIFIED IN CONTRACT DOCUMENTS IN SAME MANNER AS INDICATED OR SPECIFIED IN SIMILAR CONDITIONS.

   D. REPORT ANY DISCREPANCY BETWEEN DISCIPLINE DRAWINGS TO ARCHITECT/ENGINEER PRIOR TO FABRICATIONS/ERECTION OF ANY MEMBERS.

   E. USE ONLY DIMENSIONS INDICATED ON DRAWINGS. DO NOT SCALE DRAWINGS OR USE ANY DIMENSIONS TAKEN FROM ELECTRONIC DRAWING FILES.

   F. ENGAGE A SPECIALTY ENGINEER TO DESIGN, DETAIL AND SUBMIT SIGNED AND SEALED DRAWINGS FOR REVIEW AND COMMENT OF POINTS OF ATTACHMENT AND IMPACT ON PRIMARY STRUCTURE AND FOR PRE-ENGINEERED/PRE-FABRICATED ELEMENTS AND OTHER ELEMENTS INDICATED ON CONTRACT DOCUMENTS. A SPECIALTY ENGINEER IS A QUALIFIED LICENSED STRUCTURAL ENGINEER REGISTERED IN STATE WHERE PROJECT IS LOCATED AND AS REQUIRED BY LOCAL JURISDICTION.

      A LIST OF SPECIALTY ENGINEERED ITEMS INCLUDES, BUT IS NOT LIMITED TO:

      1) SHORING, RESHORING AND BACKSHORING;
      2) TEMPORARY BRACING, CONSTRUCTION LOADINGS, AND TEMPORARY SUPPORT STRUCTURES;
      3) STRUCTURAL STEEL CONNECTIONS;

      ATTACHMENTS OF ITEMS SUPPORTED BY STRUCTURE NOT SPECIFICALLY AND COMPLETELY DETAILED IN CONTRACT DOCUMENTS ARE RESPONSIBILITY OF CONTRACTOR. SOME SPECIALTY ITEMS MAY HAVE POINTS OF ATTACHMENT IDENTIFIED ON DOCUMENTS.
      CONTRACTOR IS SOLELY RESPONSIBLE FOR CONSTRUCTION MEANS AND METHODS, SITE SAFETY, AND PERMITS. COMPLY WITH LAWS, ORDINANCES, RULES, REGULATIONS AND LAWFUL ORDERS OF ANY PUBLIC AUTHORITY BEARING UPON PERFORMANCE OF WORK.

   G. STRUCTURE HAS BEEN DESIGNED IN ITS COMPLETED FORM FOR IMPOSED LOADS AS REQUIRED BY CODE AND AS INDICATED. NO PROVISIONS HAVE BEEN MADE NOR IS ARCHITECT/ENGINEER RESPONSIBLE FOR ANY TEMPORARY CONSTRUCTION STAGING AND LOADINGS ON STRUCTURE, INCLUDING SLAB ON GRADE.

   H. WHERE NOT INDICATED ON STRUCTURAL DOCUMENT, COORDINATE, BUT NOT LIMITED TO FOLLOWING WITH OTHER DISCIPLINE DRAWINGS AND RESPECTIVE SUBCONTRACTORS:

      1) ELEVATIONS AND SLOPES;
      2) SIZE, LOCATION AND EXTENT OF CURBS, FLOOR DEPRESSIONS AND TOPPING SLABS;
      3) SIZE AND LOCATION OF DRAINS, TRENCHES, SLAB OPENING AND WALL OPENINGS;
      4) SIZE AND LOCATIONS OF RECESSES AND REVEALS IN CONCRETE WORK;
      5) SIZE, TYPE AND LOCATION OF NON-LOADING BEARING PARTITIONS;
      6) SIZE AND LOCATIONS OF SLEEVES AND HANGERS;
      7) ELEMENTS EMBEDDED IN STRUCTURE OF PENETRATING STRUCTURE;
      8) ATTACHMENTS OF NON-STRUCTURAL ITEMS AND ELEMENTS TO STRUCTURE, WHETHER SPECIFICALLY DETAILED OR NOT;
      9) SITE AND SUBGRADE DRAINAGE SYSTEMS;
      10) WATERPROOFING AND DAMP PROOFING;
      11) REQUIRE FIRE RATINGS AND FIRE PROOFING.

      WHERE INDICATED, OPENING SIZES AND LOCATIONS FOR PIPES, DUCTS, ETC. ARE FOR GENERAL INFORMATION ONLY. VERIFY WITH OTHER DISCIPLINE DRAWING AND RESPECTIVE SUBCONTRACTORS. REPORT ANY DISCREPANCIES TO ARCHITECT/ENGINEER IN WRITING PRIOR TO IMPLEMENTING WORK. REFER TO DETAILS FOR RESTRICTIONS AND PARAMETERS.

   I. DETAILS, SECTIONS AND NOTES DESIGNATED AS "TYPICAL ARE INTENDED TO SHOW INTENT AND ALSO APPLY TO SIMILAR CONDITIONS, UNO.

EXISTING CONSTRUCTION

1. REFERENCE DOCUMENTS

   A. EXISTING CONSTRUCTION INDICATED ON DRAWINGS IS FOR REFERENCE ONLY. VERIFY EXISTING DIMENSIONS AND CONDITIONS PRIOR TO ORDERING MATERIAL AND STARTING WORK. BRING DISCREPANCIES BETWEEN EXISTING CONDITIONS AND ASSUMED EXISTING CONDITIONS INDICATED ON CONTRACT DOCUMENTS TO IMMEDIATE ATTENTION OF ARCHITECT/ENGINEER.

   B. EXISTING CONSTRUCTION HAS NOT BEEN VERIFIED FOR CONFORMANCE WITH REQUIREMENTS OF APPLICABLE BUILDING CODE EXCEPT FOR AREAS DIRECTLY AFFECTED BY MODIFICATIONS INDICATED HEREIN.

   C. REPRESENTATION OF EXISTING STRUCTURAL FRAMING IS BASED UPON EXISTING DRAWINGS PREPARED BY GREELEY AND HANSEN ENGINEERS, DATED AUGUST 1972.

   G. SHORE AND TEMPORARILY BRACE EXISTING CONSTRUCTION AS NECESSARY TO ACCOMMODATE REMOVAL OF EXISTING CONSTRUCTION;

   H. PREVENT UNDERCUTTING OF EXISTING FOUNDATION AND SLAB ON GRADE ELEMENTS DURING INSTALLATION OF NEW CONSTRUCTION;

   I. PROVIDE MEANS AND METHODS OF DEMOLITION AND INSTALLATION OF NEW WORK;

   J. PROVIDE ERECTION PROCEDURES, SEQUENCING, SHORING, AND TEMPORARY BRACING TO FACILITATE INSTALLATION OF NEW WORK;

   K. PROVIDE REVIEW OF TEMPORARY CONSTRUCTION LOADS IMPOSED ON NEW OR EXISTING CONSTRUCTION;

   L. VERIFY ACCESSIBILITY TO BUILDING AND MAXIMUM WORKABLE MEMBER LENGTHS BEFORE COMMENCING WITH FABRICATION. IF NEW BEAMS CANNOT BE SHIPPED AND INSTALLED AS SINGLE CONTINUOUS MEMBERS, PROVIDE COMPLETE PENETRATION WELDING OF FLANGES AND PARTIAL PENETRATION WELDING OF WEBS OF NEW BEAMS SPLICES.

   M. ENSURE STRUCTURAL INTEGRITY OF EXISTING CONSTRUCTION IS NOT COMPROMISED DURING CONSTRUCTION PROCESS. MONITOR AND SURVEY EXISTING STRUCTURE FOR MOVEMENT. MAINTAIN EXISTING CONDITION. DAMAGE TO EXISTING STRUCTURE AS A RESULT OF CONTRACTOR'S WORK SHALL BE REPAIRED TO AS GOOD OR BETTER CONDITION THAN PRIOR TO BEGINNING OF CONTRACTOR'S WORK;

   N. NOTIFY ARCHITECT/ENGINEER IF ANY EXISTING CONSTRUCTION NOT DESIGNATED FOR REMOVAL INTERFERES WITH INSTALLATION OF NEW WORK AND OBTAINING DIRECTION FROM ARCHITECT/ENGINEER PRIOR TO REMOVAL OF INTERFERING CONSTRUCTION; AND

   O. PROVIDE SPECIALTY ENGINEERING FOR DESIGN OF ANY SHORING AND TEMPORARY BRACING, TEMPORARY LOADS IMPOSED ON WORK AND FOR REMEDIAL REPAIR DETAILS OF DAMAGE TO EXISTING CONSTRUCTION THAT OCCURRED DURING CONSTRUCTION.

2. EXISTING CONCRETE

   A. PERFORM DRILLING INTO EXISTING CONCRETE IN A MANNER WHICH AVOIDS DAMAGE TO EXISTING REINFORCEMENT. DRILL A PILOT HOLE OR PERFORM NON-DESTRUCTIVE TESTING PRIOR TO ATTACHING TO ANY EXISTING CONCRETE TO DETERMINE LOCATION OF REINFORCING AND COORDINATE ATTACHMENT WITH ARCHITECT/ENGINEER. RESTORE ABANDONED PILOT HOLES WITH APPROVED PATCHING COMPOUND.

   B. WHERE EXISTING CONCRETE REINFORCEMENT IS TO BE REUSED IN PLACE, REMOVE SURROUNDING CONCRETE IN A MANNER WHICH MINIMIZES DAMAGE TO REINFORCEMENT. REPLACE DAMAGED REINFORCEMENT UTILIZING A METHOD APPROVED BY ARCHITECT/ENGINEER.

   C. THOROUGHLY CLEAN FACE OF CONCRETE SURFACES CUT FROM EXISTING CONCRETE. ALLOW SURFACE TO COMPLETELY DRY, COAT WITH APPROVED BONDING AGENT AND FINISH WITH APPROVED PATCHING COMPOUND. CUT OFF AND GRIND FLUSH EXPOSED REINFORCEMENT TO NEW CONCRETE SURFACE AND FINISH WITH EPOXY PAINT.

DESIGN CRITERIA

1. LOADS:

   A. DEAD LOAD:

      1. ACTUAL WEIGHT OF MATERIALS
      2. BUILDING SYSTEMS ALLOWANCE – 10 PSF (IN ADDITION TO BUILDING SYSTEM LOADS INDICATED ON DOCUMENTS)

   B. LIVE LOADS - FLOOR LIVE LOADS HAVE BEEN REDUCED IN ACCORDANCE WITH REFERENCED BUILDING CODE AND ARE AS FOLLOWS:

OCCUPANCY OR USE	UNIFORM LOAD PSF
HEAVY STORAGE	250
ROOF LOADS:	20

   C. HANDRAILS: DESIGN HANDRAIL ASSEMBLIES AND GUARDS FOR 50 PFL OR A CONCENTRATED LOAD OF 200 POUNDS AT ANY POINT APPLIED IN ANY DIRECTION AT TOP AND TO TRANSFER THIS LOAD THROUGH SUPPORTS TO STRUCTURE. THESE LOADS NEED NOT BE ASSUMED TO ACT CONCURRENTLY.

   D. INTERMEDIATE RAILS, BALUSTERS AND PANEL FILLERS: 50 PLF UNIFORM LOAD OF 200 LBS CONCENTRATED LOAD APPLIED AT TOP IN ANY DIRECTION. UNIFORM AND CONCENTRATED LOADS DO NOT ACT CONCURRENTLY.

2. LATERAL FORCE RESISTING SYSTEM:

   A. ABILITY OF STRUCTURAL FRAME TO RESIST LATERAL LOADS AND PROVIDE STABILITY UNDER GRAVITY LOADS DERIVES FROM COMPLETE INSTALLATION OF LATERAL FORCE RESISTING SYSTEM AND DIAPHRAGMS DESCRIBED HEREIN.

      1. LATERAL FORCE RESISTING SYSTEM: DIAPHRAGMS:
         a. ROOF
      2. FOUNDATION ELEMENTS:
         a. TIE BEAMS BETWEEN FOUNDATION ELEMENTS.

3. MAIN WIND FORCE RESISTING SYSTEM:

BASIC 3 SECOND GUST WIND SPEED	V = 150 MPH
EXPOSURE CATEGORY	= B
WIND IMPORTANCE CATEGORY	I_W = 1.15
INTERNAL PRESSURE COEFFICIENT	GC_{pi} = +/-0.18

CAST-IN-PLACE CONCRETE

1. GENERAL

   A. CONCRETE DESIGN IS IN CONFORMANCE WITH ACI 350 "CODE REQUIREMENTS FOR ENVIRONMENTAL ENGINEERING CONCRETE STRUCTURES".

   B. CONCRETE WORK SHALL CONFORM TO ACI 301 "SPECIFICATIONS FOR STRUCTURAL CONCRETE FOR BUILDINGS" AND AS INDICATED HEREIN.

   C. CONCRETE DURABILITY REQUIREMENTS:

CONCRETE ELEMENT	EXPOSURE CLASSES *	CEMENT TYPE	REQUIRED CEMENTITIOUS MATERIAL REPLACEMENT (BY CEMENT WEIGHT %)**	MAXIMUM W/C RATIO
INTERIOR SLABS ON GRADE	C1	II	25-50%	0.4
ELEVATED SLABS	C1	II	0-25%	0.4
EXTERIOR SLABS ON GRADE	C1	II	50%	0.4

   * CONCRETE ELEMENTS ARE CONSIDERED TO BE IN EXPOSURE CLASSES F0, S1 AND P1, PER ACI 318.
   ** OVERALL REPLACEMENT LIMITS. SEE SPECIFICATION CEMENTITIOUS MATERIAL COMPONENT LIMITS.

   D. CONCRETE COMPRESSIVE STRENGTHS

      1. PROVIDE NORMAL WEIGHT CONCRETE (147-153 PCF) WITH MINIMUM DESIGNATED 28-DAY COMPRESSIVE STRENGTH FOR FOLLOWING ELEMENTS, UNO ON DOCUMENTS:

ALL CONCRETE	5000 PSI

   E. CONCRETE REINFORCEMENT

      1. FOLLOWING STANDARDS SHALL APPLY TO REINFORCING STEEL:
         DEFORMED BARS: ASTM A615
         WELDED WIRE REINFORCEMENT: ASTM A185

      2. PROVIDE WELDED WIRE REINFORCEMENT IN FLAT SHEETS (ROLLS NOT PERMITTED).

   F. PROVIDE CHAMFERS AT ALL EXPOSED CONCRETE CORNERS.

   G. SUBMIT CONCRETE MIX DESIGNS TO OWNER'S TESTING AGENCY FOR REVIEW AND COMMENT PRIOR TO SUBMISSION TO ARCHITECT/ENGINEER.

   H. COORDINATE SAMPLING, TESTING AND INSPECTION OF CONCRETE AND REINFORCEMENT WITH TESTING AGENCY.

2. DETAILING:

   A. DETAIL REINFORCEMENT AND ACCESSORIES IN ACCORDANCE WITH ACI 315 AND ACI 318, UNO ON DOCUMENTS.

   B. PROVIDE CLEAR COVER FOR CAST-IN-PLACE REINFORCEMENT TO MEET REQUIREMENT OF ACI 350.

   C. FABRICATE AND PLACE REINFORCEMENT IN ACCORDANCE WITH CRSI 63 AND 65, UNO ON DOCUMENTS.

      1. DEVELOPMENT LENGTH AND LAP SPLICES FOR REINFORCEMENT SHALL CONFORM TO ACI 318, CHAPTER 12, UNO ON DOCUMENTS. USE CLASS B TENSION LAP SPLICES UNO ON DOCUMENTS OR REVIEWED BY ARCHITECT/ENGINEER.

      2. SPLICE REINFORCING BARS ONLY AS INDICATED ON DRAWINGS EXCEPT LAP SPLICE REINFORCING BARS DESIGNATED AS "CONT" WITH CLASS B LAP SPLICES. LAP SPLICE CONTINUOUS REINFORCING BARS AT SUPPORT FOR BOTTOM BARS AND AT MIDSPAN FOR TOP AND SIDE BARS.

      3. HOOK UNSCHEDULED TOP AND SIDE REINFORCING BARS AT DISCONTINUOUS ENDS.

      4. PROVIDE A MINIMUM OF TWO BOTTOM BARS CONTINUOUS THROUGH SUPPORT.

   D. MATCH DOWELS WITH SIZE AND SPACING/NUMBER OF MAIN REINFORCING, UNO.

3. CONCRETE PLACEMENT

   A. LOCATE HORIZONTAL JOINTS IN CONCRETE ONLY WHERE THEY NORMALLY OCCUR OR WHERE INDICATED. LOCATE VERTICAL JOINTS IN MIDDLE THIRD OF SPANS OF SLABS, BEAMS OR GIRDERS (NON-POST TENSIONED), UNLESS A BEAM INTERSECTS A GIRDER AT MIDDLE LOCATION, IN WHICH CASE OFFSET JOINTS IN GIRDERS TWICE WIDTH OF BEAM. LOCATE VERTICAL JOINTS WITHIN END THIRD OF SPANS OF POST TENSIONED CONTINUOUS SLABS, BEAMS OR GIRDERS WHERE TENDON PROFILE IS AT OR NEAR CENTROID OF CONCRETE CROSS SECTION.

   B. ROUGHEN SURFACE OF CONSTRUCTION JOINTS SO THAT AGGREGATE SHALL BE EXPOSED UNIFORMLY, LEAVING NO LAITANCE, LOOSENED PARTICLES OR DAMAGED CONCRETE.

   C. PLACING REINFORCEMENT:

      1. REINFORCEMENT AT TIME CONCRETE IS PLACED, SHALL BE FREE OF MUD, OIL, OR OTHER MATERIALS THAT MAY ADVERSELY AFFECT OR REDUCE BOND.

      2. EXTEND WELDED WIRE REINFORCEMENT CONTINUOUS ACROSS BEAMS, GIRDERS AND WALLS.

      3. LAP WELDED WIRE REINFORCEMENT AT LEAST 2 MESHES PLUS END EXTENSION OF WIRES AND TIE SECURELY.

      4. OFFSET VERTICAL BARS IN COLUMNS AT LEAST ONE BAR DIAMETER AT LAP SPLICES.

      5. WHERE PARALLEL REINFORCEMENT IS PLACED IN TWO OR MORE LAYERS IN BEAMS OR JOISTS, PLACE REINFORCING STEEL IN UPPER LAYER DIRECTLY ABOVE THOSE IN BOTTOM LAYER WITH CLEAR DISTANCE BETWEEN LAYERS EQUAL TO GREATER OF ONE BAR DIAMETER OR ONE INCH.

      6. WORKING DOWELS INTO WET CONCRETE IS NOT PERMITTED.

      7. PROVIDE PLASTIC TIPPED BAR SUPPORTS IN CONTACT WITH EXPOSED SURFACES.

      8. DO NOT TACK WELD REINFORCING BARS.

   D. CONDUIT, SLEEVES AND OPENINGS

      1. DO NOT PLACE CONDUITS, DUCTS, PIPES, OR OPENINGS, ETC. IN SLABS UNLESS SPECIFICALLY INDICATED ON DRAWINGS OR REVIEWED BY ARCHITECT/ENGINEER. PROVIDE A DRAWING INDICATING SIZE AND LOCATION OF SUCH ITEMS FOR REVIEW.

      2. PLACEMENT OF SLEEVES OR OPENINGS THROUGH GRADE BEAMS, FLOOR BEAMS, COLUMNS OR JOISTS IS NOT PERMITTED, UNO ON DOCUMENTS OR REVIEWED BY ARCHITECT / ENGINEER. SLEEVES OR OPENINGS 12-INCH SQUARE OR SMALLER MAY BE PLACED IN WALLS AND ONE-WAY SLABS.

      3. CORING OF ELEVATED CONCRETE IS NOT PERMITTED UNLESS REVIEWED BY ARCHITECT/ ENGINEER AND REINFORCEMENT IS LOCATED AND AVOIDED.

4. CURING:

   A. WET CURE CONCRETE IN ACCORDANCE WITH SPECIFICATIONS UNLESS INDICATED OTHERWISE IN DOCUMENTS.

   A. CONCRETE WORK SHALL CONFORM TO ACI 117, UNO.

5. REMOVAL OF FORMWORK:

   A. EXCEPT AS HEREIN SPECIFIED, REMOVE FORMWORK AND RESHORE IN ACCORDANCE WITH ACI 301 AND RECOMMENDATIONS OF ACI 347 TO ENSURE COMPLETE SAFETY OF FORMWORK AND STRUCTURE.

   B. FORMWORK FOR COLUMNS, WALLS, SIDES OF BEAMS AND OTHER PARTS NOT SUPPORTING WEIGHT OF CONCRETE MAY BE REMOVED AFTER CONCRETE HAS HARDENED SUFFICIENTLY TO RESIST DAMAGE FROM FORMWORK REMOVAL OPERATIONS.

   C. RETAIN FORMS AND SHORING FOR ALL HORIZONTAL WORK UNTIL CONCRETE HAS ACHIEVED AT LEAST 75% OF ITS DESIGNATED 28-DAY COMPRESSIVE STRENGTH AND WILL SAFELY SUPPORT ITS OWN WEIGHT AND UNTIL COLUMNS ABOVE HAVE BEEN CAST AND HARDENED. RESHORE OR BACKSHORE AS HEREIN SPECIFIED.

6. SHORING:

   D. NO CONSTRUCTION LOADS OR LIVE LOADS ARE PERMITTED ON FLOOR DURING STRIPPING AND UNTIL RESHORING IS COMPLETE.

   E. BEGIN RESHORING AFTER FORMS AND SHORES HAVE BEEN REMOVED FROM A LARGE ENOUGH AREA SUCH THAT FLOOR DEFLECTS AND SUPPORTS ITS OWN WEIGHT. COMPLETE RESHORING NO LATER THAN END OF WORKING DAY ON WHICH STRIPPING OCCURS.

   F. PLACE RESHORES SNUG AGAINST SOFFIT OF FLOOR ABOVE. DO NOT TIGHTEN RESHORES AS TO PRELOAD FLOOR BELOW.

   G. LOCATE SHORES AND RESHORES ONLY ABOVE WHERE RESHORES ARE LOCATED BELOW. SPECIALTY ENGINEER IS RESPONSIBLE FOR REVIEW OF TRANSMISSION OF OFFSET LOADS THROUGH FLOOR FRAMING WHERE SHORES OR RESHORES ARE NOT ALIGNED WITH RESHORES BELOW,

   H. EXTEND RESHORING OVER A SUFFICIENT NUMBER OF FLOORS TO DISTRIBUTE WEIGHT OF NEWLY PLACED CONCRETE, FORMWORK AND CONSTRUCTION LIVE LOADS IN SUCH A MANNER THAT SPECIFIED DESIGN LIVE LOADS (TAKING INTO ACCOUNT APPLICABLE LIVE LOAD REDUCTION) OF FLOORS BELOW ARE NOT EXCEEDED. CONTRACTOR'S SPECIALTY ENGINEER SHALL DETERMINE NUMBER OF FLOORS REQUIRED TO SUPPORT WET CONCRETE.

   I. FINISH SURFACES TO FOLLOWING TOLERANCES, ACCORDING TO ASTM E 1155, FOR A RANDOMLY TRAFFICKED FLOOR SURFACE:
      1. SPECIFIED OVERALL VALUES OF FLATNESS, F(F) 25; AND OF LEVELNESS, F(L) 20; WITH MINIMUM LOCAL VALUES OF FLATNESS, F(F) 17; AND OF LEVELNESS, F(L) 15.

POST-INSTALLED ANCHORAGE SYSTEMS

1. GENERAL:

   A. PROVIDE ANCHORAGE SYSTEMS OF DIAMETER AND EMBEDMENT WHERE INDICATED ON DOCUMENTS.

   B. ANCHORAGE SYSTEMS NOT INDICATED ON DOCUMENTS MAY ONLY BE PROVIDED WHERE SPECIFICALLY REQUESTED IN WRITING BY SUBCONTRACTOR AND ONLY AFTER REVIEW AND COMMENT BY ARCHITECT/ENGINEER.

   C. DESIGN OF ANCHORAGE SYSTEMS IS BASED ON HILTI, INC (USA).

   D. PROPOSED SUBSTITUTIONS OF ANCHORAGE SYSTEMS SHALL BE EQUIVALENT. PROVIDE MANUFACTURER'S PUBLISHED LITERATURE AND ANCHORAGE DESIGN PROGRAM FOR REVIEW AND COMMENT BY ARCHITECT/ENGINEER.

   E. PROVIDE ANCHORAGE SYSTEMS AS A COMPLETE SYSTEM AS SUPPLIED BY DESIGNATED MANUFACTURER. COMPLETE SYSTEM INCLUDES, BUT IS NOT LIMITED TO: INSTALLATION EQUIPMENT, ADHESIVE, ANCHORS, ANCHOR RODS, DEFORMED REINFORCING BARS, OR OTHER MANUFACTURER'S REQUIRED COMPONENTS, ETC.

   F. PROVIDE ANCHORAGE SYSTEM IN ACCORDANCE WITH MANUFACTURER'S PRINTED INSTALLATION INSTRUCTIONS, INCLUDING BUT NOT LIMITED TO: DRILLING HOLES USING MANUFACTURER'S RECOMMENDED BIT AND EQUIPMENT (CORED HOLES NOT ALLOWED), CLEANING OF BORE HOLE, ICC EVALUATION SERVICE REPORT, ETC. MAKE AVAILABLE MANUFACTURER'S PRINTED INSTALLATION INSTRUCTIONS AT SITE.

   G. DO NOT MIX ANCHORAGE SYSTEM COMPONENTS FROM DIFFERENT MANUFACTURERS.

   H. SUBSTITUTION OF POST-INSTALLED ANCHORAGE SYSTEM FOR CAST-IN ANCHORS INDICATED ON DOCUMENTS ARE NOT PERMITTED EXCEPT IN CASES OF ERROR IN INSTALLATION AND ONLY AFTER REVIEW AND COMMENT BY ARCHITECT/ENGINEER.

   I. PERSONNEL CERTIFIED BY ACI/CRSI ADHESIVE ANCHOR INSTALLER PROGRAM ARE REQUIRED TO PERFORM INSTALLATION OF ANCHORAGE SYSTEM IN A HORIZONTAL OR UPWARDLY INCLINED ORIENTATION AND WHERE SUPPORTING SUSTAINED TENSION LOADS.

   J. DO NOT INSTALL ANCHORAGE SYSTEM IN CONCRETE UNTIL IT HAS ACHIEVED A MINIMUM COMPRESSIVE STRENGTH OF 2,500 PSI AND HAS A MINIMUM AGE OF 21 DAYS.

   K. DO NOT DAMAGE OR DISTURB EXISTING CONCRETE REINFORCEMENT. DRILL PILOT HOLE OR UTILIZE NON-DESTRUCTIVE METHODS TO LOCATE AND AVOID EXISTING REINFORCEMENT PRIOR TO DRILLING.

   L. POST-INSTALLED ANCHORAGE SYSTEMS MAY NOT BE USED IN SUBMERGED CONDITIONS OR WHERE ANCHOR WILL BE SUBMERGED IN-SERVICE, UNO ON DOCUMENTS.

   M. POST-INSTALLED ANCHORAGE SYSTEMS ARE NOT PERMITTED IN PLASTIC HINGE ZONES INDICATED ON DOCUMENTS.

2. CRITERIA:

   A. TEST AND EVALUATE ANCHORAGE SYSTEMS FOR RELIABILITY PER ACI 355.2 AND ACI 355.4 REQUIREMENTS AND RATE AS CATEGORIES 1, 2 OR 3.

   B. PROVIDE ICC EVALUATED ANCHORAGE SYSTEMS. SUBMIT CURRENT AND VALID EVALUATION REPORT INDICATING CONFORMANCE WITH CURRENT APPLICABLE ICC EVALUATION SERVICES ACCEPTANCE CRITERIA SHOWING ANCHOR RELIABILITY CATEGORY AND LOAD CAPACITIES IN ACCORDANCE WITH ACI 318, APPENDIX D, AND SUITABILITY FOR PROPOSED INSTALLATION. ARCHITECT/ENGINEER RESERVES RIGHT TO REJECT ANY ANCHORAGE SYSTEM WITHOUT SUITABLE DOCUMENTATION. INSTALL PER MANUFACTURER'S WRITTEN INSTRUCTIONS AND ANY MODIFICATIONS/RESTRICTIONS NOTED IN EVALUATION REPORT.

   C. ANCHORAGE SYSTEM CAPACITIES ARE BASED ON CRACKED CONCRETE USING DESIGN PROCEDURES IN ACI 318 APPENDIX D UNLESS IT CAN BE SHOWN THAT CONCRETE WILL NOT CRACK AT LOCATION OF INSTALLATION. ATTACHMENT TO WALLS AND COLUMNS MAY BE ASSUMED TO BE UNCRACKED CONCRETE.

   D. PROVIDE ADHESIVE ANCHORAGE SYSTEMS WITH FOLLOWING MINIMUM BOND STRESS VALUES:
      1. EXPOSED APPLICATIONS – 200 PSI
      2. UNEXPOSED APPLICATIONS – 300 PSI

   E. PROVIDE ANCHORS MEETING DUCTILITY REQUIREMENTS OF ACI 318.

3. MECHANICAL ANCHORAGE SYSTEM:

   A. ANCHORAGE SYSTEMS IN NORMAL OR LIGHTWEIGHT WEIGHT REINFORCED CONCRETE SHALL UTILIZE CARBON STEEL HILTI KWIK BOLT 3 EXPANSION ANCHORS OR EQUIVALENT, UNO ON DOCUMENTS. WHEN INDICATED ON DOCUMENTS, UTILIZE STAINLESS STEEL ANCHOR BODY, NUT, WASHER AND EXPANSION SLEEVE.

      1. PROVIDE HEX NUTS CONFORMING TO ASTM A 563 GRADE DH FOR CARBON STEEL ANCHOR RODS AND ASTM F 594 FOR STAINLESS STEEL ANCHOR RODS.
      2. PROVIDE WASHERS CONFORMING TO ASTM F 436 FOR CARBON STEEL ANCHOR RODS AND ASTM A240 FOR STAINLESS STEEL ANCHOR RODS.

4. ADHESIVE ANCHORAGE SYSTEMS:

   A. IN NORMAL WEIGHT REINFORCED CONCRETE, USE HILTI HIT-RE 500-SD OR HILTI HIT-HY 200 ADHESIVE.

   B. PROVIDE HILTI HIT-Z ANCHOR RODS OR CARBON STEEL CONTINUOUSLY THREADED ANCHOR RODS CONFORMING TO ASTM A 193 GRADE B7, UNO ON DOCUMENTS. WHEN INDICATED ON DOCUMENTS, CONTINUOUSLY THREADED ANCHOR RODS SHALL CONFORM TO ASTM F 593.

- USE REPAIR MATERIALS PER MANUFACTURERS INSTRUCTIONS
- PROVIDE TEMPORARY SHORING DURING BEAM REPAIR UNTIL BEAM REPAIR IS COMPLETE AND REPAIR MATERIAL IS CURED A MINIMUM OF SEVEN (7) DAYS. COORDINATE LOCATION AND DESIGN OF SHORING WITH OWNER'S OPERATIONAL REQUIREMENTS. SHORING DRAWINGS SHALL BE SIGNED AND SEALED BY ENGINEER LICENSED IN FLORIDA.
- PREVENT VEHICULAR TRAFFIC FROM LOADING BEAM UNTIL REPAIR MATERIAL HAS ATTAINED A MINIMUM STRENGTH OF 3000 PSI AND REPAIR MATERIAL IS CURED A MINIMUM OF SEVEN (7) DAYS.
- PROVIDE TESTING AGENCY TO PERFORM TESTING OF REPAIR MATERIAL ACCORDING TO ASTM C39
- ARRANGE TO HAVE A REPRESENTATIVE OF REPAIR MATERIAL MFR VERIFY INSTALLATION AND PREPARATION ACCORDING TO MANUFACTURERS POINTED INSTRUCTIONS.

A GENERAL NOTES

- EXPOSED SURFACES OF WORK ELEMENTS MUST BE THOROUGHLY CLEANED PRIOR TO APPLYING REPAIR.
- TAKE EXTREME CARE WHEN REMOVING EXISTING SPALLED CONCRETE SO AS NOT TO DAMAGE EXISTING REINFORCING STEEL. COMPLETELY CLEAN EXPOSED EXISTING REINFORCING STEEL TO REMOVE RUST. NOTIFY ENGINEER IF CORRODED REBAR HAS LOST CROSS-SECTIONAL AREA.
- PROVIDE EPOXY MODIFIED CEMENTITIOUS CORROSION INHIBITING BONDING AGENT EQUIVALENT TO SIKA CRETE 211 SCC PLUS PER MANUFACTURER'S APPLICATION REQUIREMENTS.
- POWER DRIVEN HAND TOOLS USED FOR REMOVAL OF UNSOUND CONCRETE ARE SUBJECT TO THE FOLLOWING RESTRICITONS:
  - A. PNEUMATIC HAMMERS HEAVIER THAN 35 LB. CLASS SHALL NOT BE USED.
  - B. CHIPPING HAMMERS OF THE 15 LB. CLASS SHALL BE USED TO REMOVE CONCRETE FROM BEHIND REINFORCING STEEL.

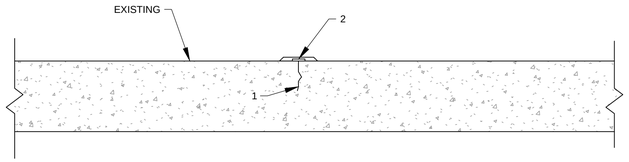
B CONCRETE WALL REPAIR NOTES

- SOUND TEST AND MARK CONCRETE AREA TO BE REMOVED.
- REMOVE ALL UNSOUND DETERIOTED CONCRETE
- COAT REINFORCING WITH TWO COATS OF SIKAARMATED 110 EPOCEM
- FORM/POUR REPAIR OPTION - SIKACRETE 211SCC PLUS FROM 1" - 8" PER LIFT.
- HAND APPLIED REPAIR OPTION - SIKAQUICK VOH - FROM $\frac{3}{8}$" - 3" PER LIFT.

F CONCRETE BEAM REPAIR NOTES

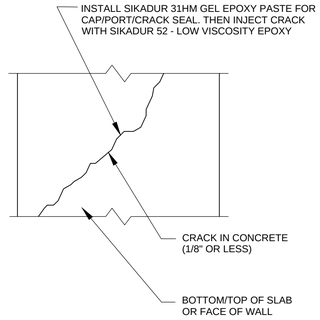
- REMOVE UNATTACHED PVC LINER AND COAT WITH 125 MILS OF C.P.P. AND OVERLAP PVC LINER BY 3"
- MAY REQUIRED ADDITIONAL ANCHORS AT THE EDGE OF EXISTING PVC LINER.

G WET WELL REPAIRS

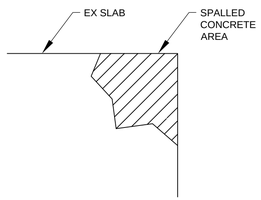


1. ROUT ALL CRACKS TO A MINIMUM OF 1/4" WIDE BY 1/4" DEEP.
2. APPLY A 6" WIDE LAYER OF SIKAFLEX 2c EURETHANE WITH A 4" NAP ROLLER. WHILE THE PRODUCT IS STILL WET, INSTALL A LAYER OF SIKA FLEXITAPE AND APPLY A SECOND LAYER OF SIKAFLEX 2c EURETHANE.

C CRACK TREATMENT
NTS



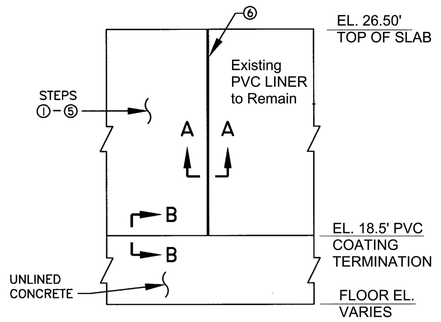
D HAIRLINE CRACK REPAIR
NTS



NOTES:

1. THIS SURFACE MUST BE MECHANICALLY PREPARED. AREA TO BE REPAIRED MUST BE CLEAN, SOUND AND FREE OF CONTAMINANTS, ALL LOOSE AND DETERIORATED CONCRETE MUST BE REMOVED.
2. CLEAN ALL EXPOSED REBAR AND COAT WITH SIKA ARMATED 110.
3. RECAST TO ORIGINAL SURFACE PROFILE USING SIKAQUICK VOH.
4. FINISH WITH MEDIUM BROOM FINISH.

E CONCRETE REPAIR
NTS



① REMOVE FAILING PVC LINER UNTIL SOUND LINER IS OBSERVED.

② HYDROBLAST* UNLINED DETERIORATED CONCRETE TO STRUCTURALLY SOUND CONCRETE

③ EXPOSED REINFORCING STEEL SHALL BE CLEANED, PREPARED AND COATED WITH CORROSION INHIBITOR.

④ FILL VOIDS OF DETERIORATED CONCRETE SECTIONS WITH REPAIR MATERIAL IN ACCORDANCE WITH THE SPECIFICATIONS AND MANUFACTURER'S INSTRUCTIONS.

⑤ SAW CUT COATING TERMINATION AND COAT 125 MILS MDFT COATING, SEE SPECIFICATIONS.

⑥ MECHANICALLY ANCHOR 2" WIDE SS316 (3/8" THK.) STRIP AT EX. LINER/NEW COATING INTERFACE. FASTEN WITH 3/8" SS316 HILTI WEDGE ANCHORS AT 2' O.C.

*CONTRACTOR MAY UTILIZE SAND BLASTING IN LIEU OF HYDROBLASTING, WITH 100% CONTAINMENT OF SAND, DEBRIS, AND AEROSOL DRIFT.

GENERAL NOTES

THE WORK CONSIST OF FURNISHING ALL LABOR, MATERIALS, EQUIPMENT, AND TECHNICAL SUPERVISION TO INSTALL THE ELECTRICAL COMPONENTS AS INDICATED AND SHOWN. THE WORK INCLUDES, BUT IS NOT LIMITED TO, THE FOLLOWING:

1. CONTRACTOR SHALL SUBMIT SHOP DRAWINGS FOR APPROVAL PRIOR TO PURCHASING EQUIPMENT OR COMMENCING CONSTRUCTION.
2. ALL WIRING SHALL BE IDENTIFIED WITH NUMBERS AT ALL TERMINALS AND ON WIRING DIAGRAMS.
3. FIELD VERIFY ALL EQUIPMENT LOCATIONS AND CONNECTIONS PRIOR TO COMMENCING CONSTRUCTION.
4. ALL NEW EQUIPMENT SHALL BE PERMANENTLY IDENTIFIED WITH A BLACK ON WHITE LAMACOID TAG ENGRAVED WITH MINIMUM 3/16 INCH LETTERING.
5. ALL CONDUCTOR LENGTHS SHALL BE CONTINUOUS. NO SPLICES OR CONDUCTOR TERMINATIONS SHALL BE PERMITTED UNLESS SPECIFICALLY DESIGNATED IN THE DRAWINGS.
6. ALL EXISTING INSTALLATIONS DENOTED ON THE DRAWINGS ARE FOR THE CONTRACTORS REFERENCE ONLY.
7. INSTALL CIRCUIT BREAKERS, CONDUIT, CONDUCTORS, MANUAL SWITCH, I/O MODULES, SURGE PROTECTION DEVICES AS INDICATED TO ACCOMMODATE THE NEW BAR SCREEN CONTROL PANEL AND NEW SLIDE GATE ACTUATOR AS SHOWN AND SPECIFIED.
8. ALL ELECTRICAL WORK SHALL BE PERFORMED IN ACCORDANCE WITH THE FLORIDA BUILDING CODE (FBC) 6TH EDITION 2017, THE NATIONAL ELECTRICAL CODE (NEC) 2014 AND CHAPTER 5 OF THE CITY OF TAMPA CODE.
9. TEST AND START–UP REPORTS FOR THE BAR SCREEN AND SLIDE GATE ACTUATOR SHALL BE INCLUDED IN THE OPERATION AND MAINTENANCE (O&M) MANUALS PROVIDED UNDER THIS CONTRACT. ALL CIRCUIT BREAKER SETTINGS SHALL BE TABULATED AND INCLUDED IN THE O&M MANUAL.

KEYED NOTES:

1. PROPOSED LOCATION FOR RELOCATED BIOXODE TANK. CONTRACTOR TO PROVIDE NEW CONDUIT AND CONDUCTORS TO ACCOMMODATE THE NEW BIOXODE TANK LOCATION. FIELD ROUTE NEW CONDUIT AS REQUIRED. INSTALL NEW CONDUIT TO AVOID TRIPPING HAZARDS. REFER ALSO TO KEYED NOTE #3 ON SHEET E-2.
2. PROPOSED BAR SCREEN.
3. PROPOSED COMPACTOR.
4. PROPOSED STAND FOR SLIDE GATE ELECTRIC ACTUATOR.
5. PROVIDE AND INSTALL NEW 600V, 30A, 3-POLE MANUAL DISCONNECT SWITCH, SELECTOR SWITCH AND ASSOCIATED JUNCTION BOXES. REFER TO DETAIL ON SHEET E-10.
6. PROVIDE AND INSTALL 3-#10 + 1-#10 GND IN 3/4"C. FROM MANUAL SWITCH TO EXISTING MCC (REFER TO KEYED NOTE #10 ON SHEET E-5 FOR MCC LOCATION). FIELD ROUTE CONDUIT AS REQUIRED. REFER TO SHEET E-5 FOR CONTINUATION.
7. PROVIDE AND INSTALL 2-#14 + 1-#14 GND IN 3/4"C. FROM 24V DC JUNCTION BOX TO NEW BAR SCREEN CONTROL PANEL (REFER TO KEYED NOTE #8 BELOW FOR BAR SCREEN CONTROL PANEL LOCATION) FOR AUTO OPEN ON HIGH LEVEL BYPASS CONDUCTORS. FIELD ROUTE CONDUIT AS REQUIRED.
8. PROVIDE AND INSTALL NEW 3/4" CONDUIT WITH 12-#14 + 1-#14 GND FROM NEW SLIDE GATE OPERATOR TO ANNUNCIATOR CONTROL PANEL FOR SLIDE GATE INPUT/OUTPUTS (4-#14 OPEN, CLOSE, STOP, COMMAND COMMANDS, 2-#14 VALVE UNDER REMOTE CONTROL INDICATION, 2-#14 VALVE OPEN INDICATION, 2-#14 VALVE CLOSED INDICATION). FIELD ROUTE CONDUIT AS REQUIRED. REFER TO SHEET E-5 FOR EXISTING ANNUCIATOR CONTROL PANEL LOCATION. REFER TO SHEET E-5 FOR CONDUIT CONTINUATION.
9. PROVIDE AND INSTALL NEW BAR SCREEN CONTROL PANEL. MOUNT WITH TWO (2) 6" SQUARE ALUMINUM POSTS. PROVIDE FULL FILLET WELD TO 12" X 12" X 3/4" ALUMINUM BASE PLATES. SECURE BASE PLATES TO CONCRETE SLAB WITH FOUR (4) STAINLESS STEEL 1/2" DIA. X 8" BOLTS & STAINLESS STEEL HEX NUTS WITH LOCKWASHER. DRILL CONCRETE & EMBED BOLTS AND ANCHORS IN EPOXY. COAT BOTTOM OF BASE PLATE WITH ASPHALT PAINT. PROVIDE NEOPRENE GASKET BETWEEN ALL STAINLESS STEEL AND ALUMINUM COMPONENTS.
10. PROVIDE AND INSTALL 3-#10 + 1-#10 GND IN 3/4"C. FROM BAR SCREEN CONTROL PANEL TO EXISTING MCC (REFER TO KEYED NOTE #10 ON SHEET E-5 FOR MCC LOCATION). FIELD ROUTE CONDUIT AS REQUIRED. REFER TO SHEET E-5 FOR CONTINUATION.
11. PROVIDE AND INSTALL NEW 1" CONDUIT WITH 26-#14 + 1-#14 GND FROM NEW BAR SCREEN CONTROL PANEL TO EXISTING ANNUNCIATOR CONTROL PANEL FOR BAR SCREEN INPUT/OUTPUTS. REFER TO SHEET E-9 FOR CONTACT DEVELOPMENT. REFER TO SHEET E-5 FOR CONDUIT CONTINUATION AND EXISTING ANNUNCIATOR CONTROL PANEL LOCATION. FIELD ROUTE CONDUIT AS REQUIRED.
12. REFER TO KEYED NOTE #7 ABOVE.

GENERAL NOTES:

1. FOR HAZARDOUS AREA IDENTIFICATION REFER TO SHEET E-4.
2. CONTRACTOR SHALL COORDINATE WITH BAR SCREEN SUPPLIER FOR REQUIREMENTS FOR THE BAR SCREEN LOCAL CONTROL STATION AND THE COMPACTOR LOCAL CONTROL STATION INSTALLATION, INCLUDING PROPOSED LOCATION, REQUIRED CONDUIT AND CONDUCTORS.
3. CONTRACTOR SHALL COORDINATE WITH BAR SCREEN SUPPLIER FOR REQUIREMENTS FOR: ALL BAR SCREEN EQUIPMENT MOTOR WIRING, MOTOR THERMOSTATS, SOLENOID VALVES, HIGH LEVEL FLOAT SWITCH, ULTRASONIC LEVEL TRANSDUCERS AND ALL OTHER ANCILLARY EQUIPMENT FOR A FULLY COMPLETE AND FUNCTIONING SYSTEM, ALL CONDUCTORS, CONNECTIONS, LOCATIONS, ETC. SHALL BE PER THE BAR SCREEN SUPPLIERS SPECIFICATIONS.
4. THE BAR SCREEN CONTROL PANEL SHALL BE INSTALLED OUTSIDE OF THE AREA CLASSIFIED AS CLASS I, DIV 2. THE BAR SCREEN LOCAL CONTROL STATION AND THE COMPACTOR LOCAL CONTROL STATION SHALL BE INSTALLED WITHIN THE AREA CLASSIFIED AS CLASS I, DIV 2. REFER TO SHEET E-4 FOR HAZARDOUS AREA IDENTIFICATION.
5. ALL INSTALLATIONS WITHIN THE CLASSIFIED AREA SHALL COMPLY WITH ARTICLE 502 OF THE 2014 NATIONAL ELECTRICAL CODE.

EXISTING ANNUNCIATOR CONTROL PANEL
INTERIOR DETAIL

SCALE : N.T.S.

A
E-5 | E-6

KEYED NOTES:

1. INTERIOR OF EXISTING ANNUNCIATOR CONTROL PANEL. CONTRACTOR TO MAKE MODIFICATIONS TO EXISTING CONTROL PANEL AS NOTED BELOW.
2. EXISTING PLC RACK CONSISTING OF: ONE (1) – GE RX3i CPU : IC695CPE305–ABAG; ONE (1) – SERIAL COMMUNICATION MODULE: GE IC695CMM004; THREE (3) DC INPUT MODULES: GE IC694MDL241; ONE (1) A/C RELAY MODULE: GE IC694MDL916; ONE (1) 120V POWER SUPPLY: GE IC695PSA140; ONE (1) 12–SLOT BACK PLANE: GE IC695CHS012.
3. EXISTING DC INPUT MODULE (GE IC694MDL241) CURRENTLY LOCATED IN SLOT 6. CONTRACTOR SHALL UTILIZE SPARE INPUTS FOR NEW INPUTS REQUIRED UNDER THIS CONTRACT. REFER TO SHEET E–7 FOR DETAILS.
4. EXISTING A/C RELAY MODULE (GE IC694MDL930) CURRENTLY LOCATED IN SLOT 7. CONTRACTOR SHALL UTILIZE SPARE OUTPUTS (AND ASSOCIATED RELAYS) FOR NEW OUTPUTS REQUIRED UNDER THIS CONTRACT. REFER TO SHEET E–7 FOR DETAILS.
5. CONTRACTOR TO PROVIDE AND INSTALL TWO (2) NEW DC INPUT MODULES (EACH GE IC694MDL241). INSTALL IN SLOTS 8 AND 9 RESPECTIVELY. REFER TO SHEET E–7 FOR DETAILS.
6. EXISTING MULTI–LEVEL TERMINAL BLOCKS. CONTRACTOR SHARE UTILIZE SPARE TERMINAL BLOCKS AS REQUIRED.
7. EXISTING SURGE PROTECTION DEVICES FOR 24V DC DISCRETE INPUT CIRCUITS. CONTRACTOR SHARE UTILIZE SPARE SURGE PROTECTION DEVICES AS REQUIRED.
8. CONTRACTOR TO PROVIDE AND INSTALL THIRTY TWO (32) NEW SURGE PROTECTION DEVICES FOR 24V DC DISCRETE INPUT MODULE TO BE INSTALLED ~~IN SLOT 8 AND SLOT 9~~. PHOENIX CONTACT #2794699. PROVIDE AND INSTALL ADDITIONAL DIN–RAIL, END BARRIERS, ACCESSORIES AS REQUIRED TO ACCOMMODATE NEW SURGE PROTECTION DEVICES AS REQUIRED.
9. EXISTING SQUARE–D 8501 R SERIES SPDT RELAYS WITH 120V COILS. CONTRACTOR SHARE UTILIZE SPARE INTERPOSING RELAYS CR2, CR3 AND CR4 AS REQUIRED. REFER TO SHEET E–7 FOR DETAILS.

Per Change ORder #5 & RFI #8, Slot's 8 & 9 as shown on diagram did not exisit in Panel. Contractor had to install slot 8, as referenced here, on the right inside wall of the panel. See next page for Full I/O detail of Slots 8 & 9

ACTUATOR DISCONNECT DETAIL

SCALE : N.T.S.

1 | E-3 | E-10

KEYED NOTES:

1. EXISTING SLAB, ELEVATION 41.25'.
2. PROPOSED SLIDE GATE ELECTRICAL OPERATOR AND ASSOCIATED STAND. REFER ALSO TO CIVIL/MECHANICAL DRAWINGS.
3. PROVIDE AND INSTALL 4" SQUARE ALUMINUM POST WITH 3/4" WALL THICKNESS. WELD 1/4" CAP TO TOP OF POST.
4. PROVIDE AND INSTALL 1-5/8" X 1-5/8" 316 STAINLESS STEEL UNISTRUT. ALL MOUNTING HARDWARE SHALL BE 316 STAINLESS STEEL. UNISTRUT BOLTS SHALL BE INSTALLED THROUGH POST. INSTALL NEOPRENE GASKETS WHERE STAINLESS STEEL COMES IN CONTACT WITH ALUMINUM. PROVIDE END CAPS ON ALL UNISTRUT ENDS.
5. PROVIDE AND INSTALL 8" X 8" X 1/2" ALUMINUM BASE PLATE. SECURE BASE PLATE TO CONCRETE W/(4) STAINLESS STEEL 1/2" DIA. X 8" BOLTS & STAINLESS STEEL HEX NUTS WITH LOCKWASHER. DRILL CONCRETE & EMBED BOLTS AND ANCHORS IN EPOXY. COAT BOTTOM OF BASE PLATE WITH ASPHALT PAINT. PROVIDE NEOPRENE GASKET BETWEEN ALL STAINLESS STEEL AND ALUMINUM COMPONENTS.
6. PROVIDE AND INSTALL NEW 600V, 30A, 3-POLE MANUAL SWITCH IN NEMA 4 DIE CAST ZINC ALLOY, SQUARE-D 2510KW2CH TO SERVE AS ACTUATOR 480V DISCONNECTING MEANS.
7. PROVIDE AND INSTALL A NEMA 4X TWO-POSITION SELECTOR SWITCH (MAINTAINED CONTACTS) IN A NEMA 4X STAINLESS STEEL ENCLOSURE. ALLEN BRADLEY, SQUARE D OR EQUAL. SELECTOR SWITCH TO BE UTILIZED TO BYPASS AUTO OPEN SLIDE GATE ON HIGH LEVEL WHEN DESIRED.
8. PROVIDE AND INSTALL 4" X 4" X 3" 316 STAINLESS STEEL JUNCTION BOX WITH STAINLESS STEEL HINGES AND QUARTER TURN LATCH, HAMMOND EJ443S16. JUNCTION BOX TO SERVE AS RACEWAY FOR ACTUATOR 480V CONDUCTORS (NO TERMINATIONS).
9. PROVIDE AND INSTALL 4" X 4" X 3" 316 STAINLESS STEEL JUNCTION BOX WITH STAINLESS STEEL HINGES AND QUARTER TURN LATCH, HAMMOND EJ443S16. JUNCTION BOX TO SERVE AS RACEWAY FOR ACTUATOR 24V DC CONTROL CONDUCTORS (NO TERMINATIONS).
10. PROVIDE AND INSTALL NEW 3/4" RIGID ALUMINUM CONDUIT WITH 6-#10 + 1-#10 GND FOR SLIDE GATE ACTUATOR 480V, 3ø FEEDER.
11. PROVIDE AND INSTALL NEW 3/4" RIGID ALUMINUM CONDUIT WITH 3-#10 + 1-#10 GND TO EXISTING MCC FOR SLIDE GATE ACTUATOR 480V, 3ø FEEDER. REFER TO SHEET E-5 FOR EXISTING MCC LOCATION.
12. PROVIDE AND INSTALL NEW 3/4" RIGID ALUMINUM CONDUIT WITH 3-#14 + 1-#14 GND FOR SLIDE GATE ACTUATOR AUTO CLOSE BYPASS SELECTION.
13. PROVIDE AND INSTALL NEW 3/4" RIGID ALUMINUM CONDUIT WITH 2-#14 + 1-#14 GND TO NEW BAR SCREEN CONTROL PANEL (REFER TO SHEET E-3 FOR CONTROL PANEL LOCATION) FOR SLIDE GATE ACTUATOR AUTO CLOSE BYPASS SELECTION.
14. PROVIDE AND INSTALL NEW 3/4" RIGID ALUMINUM CONDUIT WITH 12-#14 + 1-#14 GND TO EXISTING ANNUNCIATOR CONTROL PANEL FOR NEW SLIDE GATE OPERATOR INPUT/OUTPUTS (4-#14 OPEN, CLOSE, STOP COMMANDS AND COMMAND; 2-#14 VALVE UNDER REMOTE CONTROL INDICATION; 2-#14 VALVE OPEN INDICATION; 2-#14 VALVE CLOSED INDICATION; 2-#14 AUTO CLOSE HIGH LEVEL BYPASS). REFER TO SHEET E-5 FOR EXISTING ANNUNCIATOR CONTROL PANEL LOCATION.
15. PROVIDE AND INSTALL NEW 3/4" LIQUIDTIGHT FLEXIBLE NONMETALLIC CONDUIT WITH 3-#10 + 1-#10 GND FOR SLIDE GATE ACTUATOR 480V, 3ø FEEDER.
16. PROVIDE AND INSTALL NEW 3/4" LIQUIDTIGHT FLEXIBLE NONMETALLIC CONDUIT WITH 12-#14 + 1-#14 GND FOR SLIDE GATE ACTUATOR 24V DC CONTROLS.

GENERAL NOTES:

1. CONTRACTOR SHALL COORDINATE THE EXACT LOCATION OF THE ACTUATOR DISCONNECT WITH THE CITY OF TAMPA.
2. REFER TO SHEET E-7 FOR I/O ASSIGNMENTS AND LISTING. REFER TO SHEET E-9 FOR CONTACT DEVELOPMENT.
